**Re: Conservation Easement Baseline Monitoring Documentation
Brentwood, New Hampshire**

Jodi,

NHSC, Inc. (NHSC) has completed the baseline monitoring and documentation for fourteen (14) conservation easement parcels located in Brentwood, NH. See attached Conservation Easement Baseline Monitoring Summary Table for identification of these easement parcels. This work was completed under contract with the New Hampshire Estuaries Project, with NHSC acting as the Technical Assistance Provider for the Town of Brentwood. The following summarizes the general approach and work performed to complete the baseline documentation for each of the conservation easement parcels:

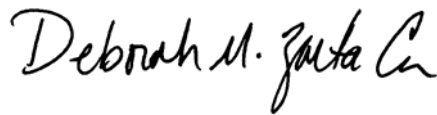

- NHSC met with the Town of Brentwood Conservation Commission on July 7, 2006 to discuss the Town's long-term management goals and the properties to include in the conservation easement baseline monitoring. The Land Trust Alliance Standards and Practices were discussed and used to establish minimum criteria for the baseline monitoring documentation.
- NHSC reviewed existing documentation for each of the subject parcels on file at the Brentwood Town Offices. Baseline documentation forms were created for each of the easement parcels and populated with relevant information from the Town files and the Rockingham County Registry of Deeds.
- Site visits were conducted for each of the easement parcels between November and December of 2006. The weather conditions for each of the site visits were favorable for locating boundary markers and overall property condition due to the seasonally dormant state of vegetation and lack of snow cover. The boundary of each site was walked, and accessible boundary markers were located using appropriate survey plans (if available). The boundary and transects of each parcel were walked to document overall conditions, accessibility and unique natural and/or historical features. Several residents and members of the Brentwood Conservation Commission provided additional information for some of the parcels and assisted in the baseline monitoring site visits.

Conservation Easement Baseline Monitoring
Brentwood, New Hampshire
February 8, 2007
Page 2 of 2

- Baseline documentation forms for each parcel were populated with the information gathered from the file review and site walk activities. Guidelines included in the Land Trust Alliance Standards and Practices were considered during this process to ensure the minimum required information was recorded.
- USGS topographic map and 2003 aerial photograph site figures were created for each parcel. Parcel boundaries are approximate and are based on the most current tax assessor's map for the town of Brentwood.
- Individual baseline documentation folders were created for each parcel. Each folder contains a copy of the baseline documentation form, a photo log, a copy of the appropriate field map (site plan or site sketch showing photo locations and other field notes), a USGS topographic map figure, and a 2003 aerial photograph site figure.
- Baseline documentation folders were delivered to the Town of Brentwood on January 23, 2007.

Enclosed please find a copy of the individual Baseline Documentation Reports for your records. Please let me know if you have any questions or if we can be of further assistance.

Respectfully Submitted,
NHSC, Inc.
