SECTION 017250 – STANDARD SITE PLAN CAD LAYERING SCHEMA

PART 1 - GENERAL

1.1 SUMMARY

- A. All Site and Civil CAD plans must be georeferenced to the proper coordinate system (NAD 1983, NH State Plane Feet) prior to submittal. Any plans that are not registered to the ground will be returned to the preparer for correction and resubmittal.
- B. The following CAD Layering standards are recommended for all site plan AutoCAD drawings (site surveys, construction documents, as-builts, etc) associated with any project. At the completion of the project the finished .DWG file(s) should then be delivered, on a CD, to the University.
- C. Layers that are not included on this list are to be built in accordance with the existing layering schema (i.e. PREFIX-CLEAR DESCRIPTION AS NAME). Once created, these layers should be added to the appropriate existing group or added as a new subgroup.
- D. Though the following layering standards are preferred and recommended, if the UNH layering standard is not followed, it is imperative that a clear and documented key or description of all CAD layers must accompany any .DWG file deliverable.
- E. Direct questions concerning Standard Site Plan CAD Layering standards to the Facilities Campus Planning GIS/CAD Group.
- F. Prefix Description:

- C: General Campus Infrastructure/Features
- CHW: Chilled Water Distribution System
- DW: Domestic Water Distribution System
- DHW: Domestic Hot Water Distribution System
- EL: Electric Distribution System
- HC: Heating and Cooling Distribution System
- LA: Landscape Features
- M: Miscellaneous Layers
- NG: Natural Gas Distribution System
- NW: Natural Waterways
- SS: Sanitary Sewer Distribution System
- SW: Storm Water Distribution System
- TEL: Telecom Distribution System
- TO: Topographic Elevation Information

- G. Layer Name:
