We, the undersigned, Auditors of the Town of Lee, have examined the foregoing account, and find it correctly cast, with corresponding vouchers.

FRED B. YORK,	} <i>Auditors</i> .
JOHN P. HALEY.	

REPORT
OF THE
Superintending School Committee,
FOR THE YEAR ENDING MARCH 1, 1882.

DISTRICT NO. 1.—*Linn*.

Summer Term, 10 weeks; number of scholars, 18; average, 16; wages per month, including board, \$21.

Winter Term, 15 weeks; number of scholars, 33; average, 25; wages per month, including board, \$28; Miss Edna A. Hobbs, of South Newmarket, teacher. We visited Miss Hobbs' school several times during the year. It always appeared quiet and orderly. At the commencement of the Fall term, there were too many classes for the interest of the school. Several of the classes in Arithmetic and Grammar were united, to give more time for each recitation. The results were good.

DISTRICT NO. 2.—*Hali*.

Summer Term, Miss Laretta Langley teacher. The school was quiet and orderly, at the commencement Miss Langley seemed to be endeavoring to make her school a success, but as we were not informed of its close we cannot judge, but trust it was a profitable term.

Winter Term, 13 2-5 weeks; number of scholars, 12; average, 10 1-3; wages not given in register; Ernest Comings, teacher. This was Mr. Comings' first attempt at teaching. Stormy weather prevented us from examining his school at its close. From the reports we heard of his school, and from what we know of him as a scholar, his school was a success.

DISTRICT NO. 3.—*Wednesday Hill.*

Length of term, 10 3-10 weeks; number of scholars, 13; average, 12; wages per month, including board, \$22; Miss Bertha J. Hobbs, of South Newmarket, teacher. As we were not informed of the close of the school, until it had finished, we can only speak of it as it appeared at our first visit, which was quite satisfactory.

DISTRICT NO. 4.—*Hill.*

Summer Term, 7 1-10 weeks; number of scholars, 16; average, 12; wages, including board, \$20; Miss Fannie M. Harvey, teacher. This was her first attempt at teaching. At the commencement of the school we heard of some dissatisfaction, which soon subsided. This speaks well for the teacher. The school appeared well, while we were present, the scholars were orderly and studious.

Winter Term, 11 6-10 weeks; number of scholars, 18; average, 17; wages per month, including board, \$28; Mrs. Millie C. Plummer, teacher. The district was very fortunate in securing Mrs. Plummer's services. She fully sustained the excellent reputation which she has formerly had, and her school was a decided success.

DISTRICT NO. 5.—*Hook.*

Summer Term, 7 weeks; number of scholars, 15; average, 11; wages, including board, \$22.

Winter Term, 9 5-10 weeks; number of scholars, 16; average, 15; wages per month, including board, \$25; Miss Emma Bartlett taught both terms. She had taught several schools previous to this. Her method of teaching Arithmetic we liked very much. She had the respect of her scholars; which enabled her to devote all her time to teaching; which always produces good results.

DISTRICT NO. 6.—*Wadley's Falls.*

Summer Term taught by Miss Jennie Cartland. We found the school quiet, and most of the scholars studious. Having taught the school two terms previous it gave her the advantage needed.

Winter Term, 12 weeks; number of scholars, 27; wages per month, \$30; Mrs. Ella J. Trickey, teacher. She had taught several terms previous to her engagement in this district. She seemed to be governing her school quite easily at the commencement. On account of sickness the school was finished by Mr. Trickey. We visited the school near its close, but found only a few pupils present; those who had tried to learn had made good progress during the year. We heard Mrs. Trickey well spoken of by the parents.

DISTRICT NO. 7.—*Lang.*

Summer Term, 8 weeks; number of scholars, 44; average, 41; wages, including board, \$30; Miss Sarah Ada Phillips of Wolfeborough, teacher. She came very highly recommended. At our first visit we found the teacher active, and the scholars orderly and studious. Perhaps she was a little eccentric, and a little more discretion outside of the school-room would have made it a little pleasanter for her during the latter part of the term. We believe that she labored sincerely and faithfully for the advancement of her school. The pupils studied well.

Winter Term, 9 weeks; number of scholars, 47; average, 46; wages, including board, \$30; Miss Abbie Elver, teacher. Miss Elver gave good satisfaction. She gave the scholars a special study in the Geography of our own State, which we think is an excellent idea.

ROLL OF HONOR.

Roll of Honor, including those who have been present every half day of a term, as reported on the Registers.

Clara Abbott, Arthur Sherburne, S. Woodie Sherburne, Charles Woodman, Nellie F. Jenkins, Grace L. Jenkins, George E. Otis, Susie E. Buzzel, Ethel J. Davis, Francena M. Jones, Nettie E. Plummer, Sadie E. Ryan, Harry H. Plummer, William H. Thompson, Herbert C. Plummer, Grace Bartlett, Josiah Bartlett, Ellen T. Kendall, Mary A. York, Nellie Glidden, Albert Durell, Stella Caswell, Susie Lang, Addie Lang, Edna Lang, Bertha Lang, George Lang, Olie Tuttle, Everett Dalton, Elley D. Jenkins.

In discharge of the duty devolving upon us, as your committee, we present you our annual report.

The school year now drawing to a close has been a very quiet one, and has been made so by the careful selection of teachers by the Prudential Committee. The teachers have been faithful in the discharge of their duties; they have shown great skill in teaching, and good judgment in the discipline of their respective schools generally. The harmony and quiet of the schools during the past year, (however it may seem to those who judge by the attendant jar and jostle,) is an indication of a profitable one to the scholars. In some the number of classes have been reduced, and a regular system of black-board work in mathematics introduced, which has produced very satisfactory results. Only one school in town has a proper supply of black-boards, the others are all too small, and are not in suitable condition to use. We think in no way can the work in the school-room be better facilitated than by the immediate enlargement and refitting of the black-boards. In black-board work the pupil not only has very

much better facilities for his mathematics, but at the same time is applying his grammar in the explanations which he should be required to give in correct language by the teacher. If a scholar learns to use correct language, he will naturally use it, as he will invariably use that in common conversation which he has become addicted to however well he may be versed in the rules of Grammar. The black-board is needed during the whole school session.

Some of the teachers have given considerable attention to the mental Arithmetic, which precedes the written in each of the rules through each of the text books now in use in Arithmetics. The mental is intended to be used as an introduction to the written, to help the scholar to apply his reasoning powers to the solution of the more difficult written problems. We find more or less scholars in all the schools who rely too much on the teacher to help them on difficult problems. Very much of this difficulty results from a lack of thoroughness and from a lack of energy in the pupil. The scholar should never give up to a problem, if he can possibly solve it.

We as yet find but very few scholars attending to History. It would be very much better for them if they would study it instead of the National Arithmetic. The Complete furnishes all the mathematics necessary, and really gives the student a better fit for a business life than the National Arithmetic. We do not object to pupils studying it, provided they have completed those studies that should be in a grade including the complete, but the study of the National Arithmetic to the exclusion of History, Physiology, Philosophy and Physical Geography we believe is not applying time to the best advantage, especially if the scholar intends to continue his studies at a higher school.

It was requested of the teachers, during the past two years, that they would give as much attention to writing as possible. The result has been all that we could wish: nearly all the scholars attending to it.

It would be an excellent idea for the pupils to get a catalogue of some Academy if they intend to study anything more than Arithmetic, Grammar and Geography. By doing this they can regulate their studies so that when they wish to attend a high school they can enter the regular classes, which will save them much time.

With these suggestions we close our annual report.

B. F. DAVIS, *Supt. School Committee.*
