## Children's Health Conference

The second annual conference for babies and children of pre-school age conducted by the New Hampshire State Board of Health, Division of Child Hygiene, was held on August tenth in the Legion Building. This conference was sponsored by the Auxiliary of the Frank E. Kilduff Post 74, American Legion, and the South Brookline Social Club.

Sixty-three children were weighed, measured and examined by Dr. George Hazard of Hollis, N. H., and Dr. Franklin Rogers, child specialist of Manchester, N. H.

The conference was under the direction of Miss Mary G. Hurley assisted by Miss Eunice Hardy of the State Board Nursing Staff.

The following is a synopsis of the examinations:

Age	Number Examined	Normal	With Defects
Birth to one year	13	4	9
One to two years	12	6	6
Two to six years	38	12	26

The defects found are as follows: Enlarged Tonsils 7; Infected Tonsils 4; Enlarged Glands 1; Nasal Obstruction 1; Defective Teeth 7; Tongue-tie 1; Anaemia 1; Phimosis 15; Orthopedic defects 9; Hernia 3; Strabismus 4; Underweight 4; Poor Posture 6.

Defects corrected at conference 9

Demonstrations of care and treatment 10

Tonsils removed since conference 2

Dental defects corrected at dental clinic 22

Strabismus undergoing correction 1

Twenty-one children were vaccinated by Dr. Weaver of the State Board of Health. Of this number nineteen vaccinations were successful.

Through the co-operation of Mrs. Mary Davis, Director of the Division of Child Hygiene, a dental clinic was held in the Reading Room of Daniels Academy by Dr. G. Arthur Danforth of Manchester, N. H., clinician for the State Board of Education. All of the children's teeth were examined and an estimate of the cost of the necessary work sent to each parent. The following amount of work was accomplished among our pre-school and school children:

Number of children examined	94
Number of fillings	112
Number of extractions	31
Number having teeth cleaned	26

Health conferences for children of pre-school age have clearly demonstrated that yearly physical examinations are one of the most effective ways of bringing about the desired results. At our conference in 1926 we had five (5) normal children. At the conference in 1927 we had twenty-two (22) normal children. The health educational value of the examination and instruction given at this time to parents is a practical demonstration of preventive work.

An itemized account of the expenditure of the \$100 appropriated by the town for Clinic Work has been given to the Selectmen.
