DURHAM, NH – Granite Staters favor increasing the child tax credit and creating a new elder/sick care credit and a plurality favor reducing the number of federal tax brackets. Residents are divided on eliminating the federal estate tax and are somewhat opposed to lowering the top corporate tax rate and lowering the "pass-through" corporate tax rate. Residents are closely divided on this package of reforms as a whole. As expected, Democrats oppose most of these changes and Republicans favor them. Increasing the child tax credit and creating an elder/sick care credit enjoys bipartisan support.

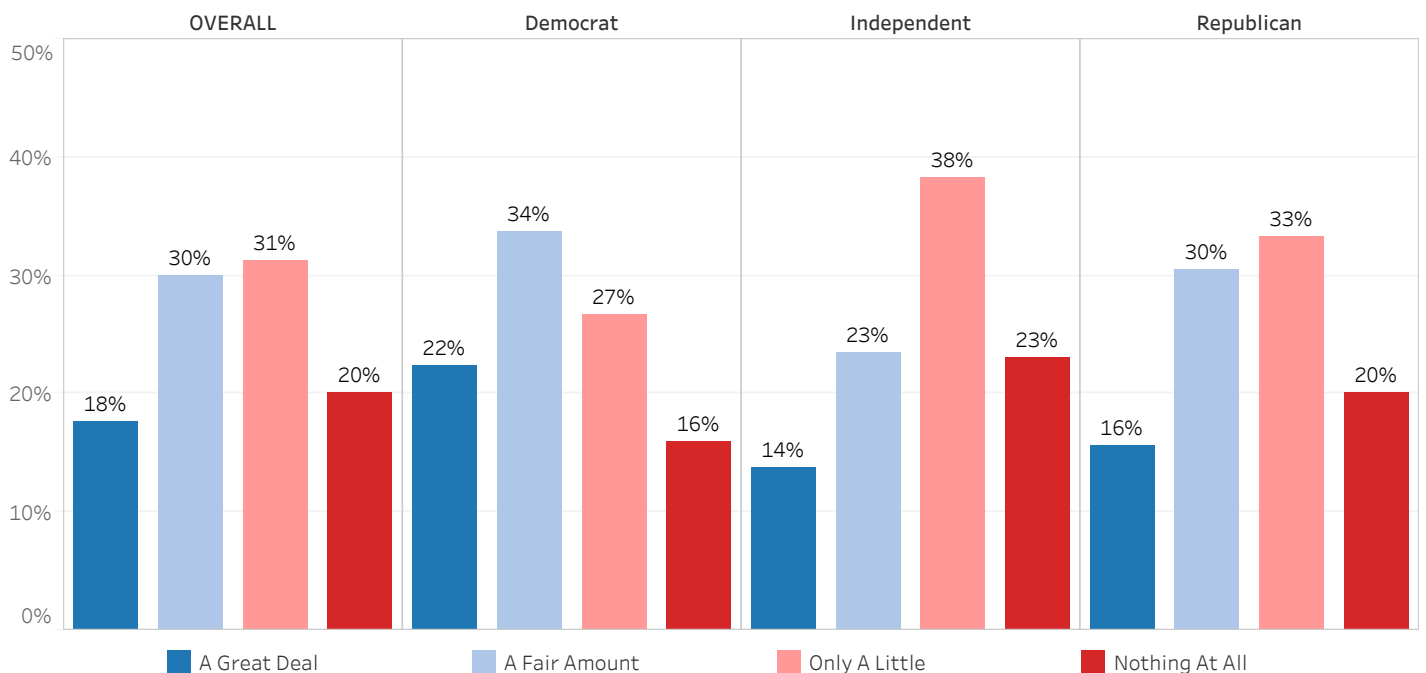

These findings are based on the latest **Granite State Poll***, conducted by the University of New Hampshire Survey Center. Nine hundred and fifty-six (956) randomly selected New Hampshire adults were interviewed in English by landline and cellular telephone between October 26 and November 9, 2017. The margin of sampling error for the survey is +/- 3.2 percent.

Awareness of Tax Proposal

Republicans in Congress are currently debating tax reform legislation. Nearly half of Granite Staters (48%) say they have heard or seen a great deal (18%) or a fair amount (30%) about the tax proposal announced by President Trump and Congressional Republicans, 31% say they have heard only a little about it, 20% have heard nothing at all about it, and 1% don't know or are unsure.

Democrats (56%) are slightly more likely than Republicans (46%) or Independents (37%) to say they have heard a great deal or a fair amount about the tax proposal.

Awareness by Party Identification

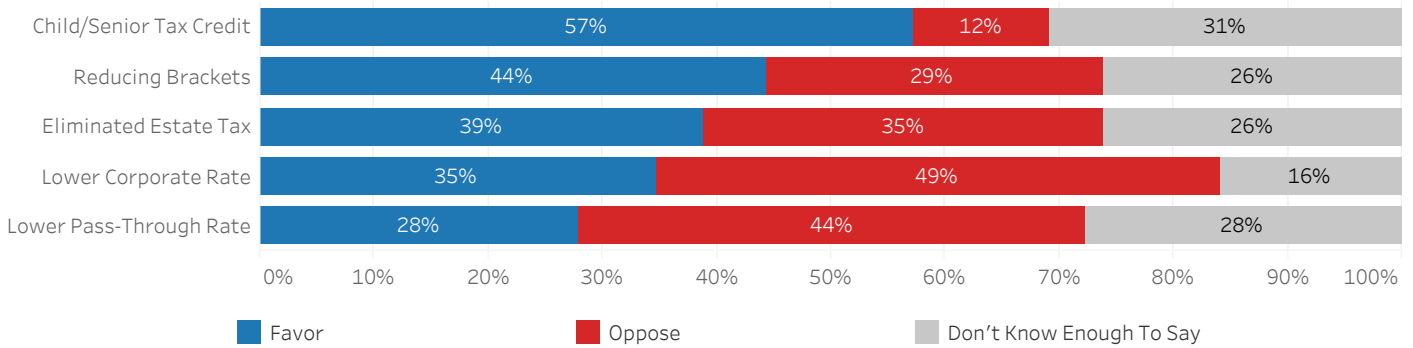

* We ask that this copyrighted information be referred to as *the Granite State Poll*, conducted by the University of New Hampshire Survey Center.

Tax Provisions

Among those who have heard at least a little about the tax proposal (N=744), more than half (57%) favor the provision of the tax proposal that would increase the current child tax credit and create a new elder/sick care tax credit. Forty-four percent favor reducing the current number of federal tax brackets from seven to as few as three, 39% favor eliminating the federal estate tax, and 35% favor lowering the corporate tax rate from 35% to 20%. Only 28% favor reducing the tax rate from 39.6% to 25% for so-called "pass-through" corporations, those in which profits double as the owner's personal income.

Overall Support for Tax Provisions

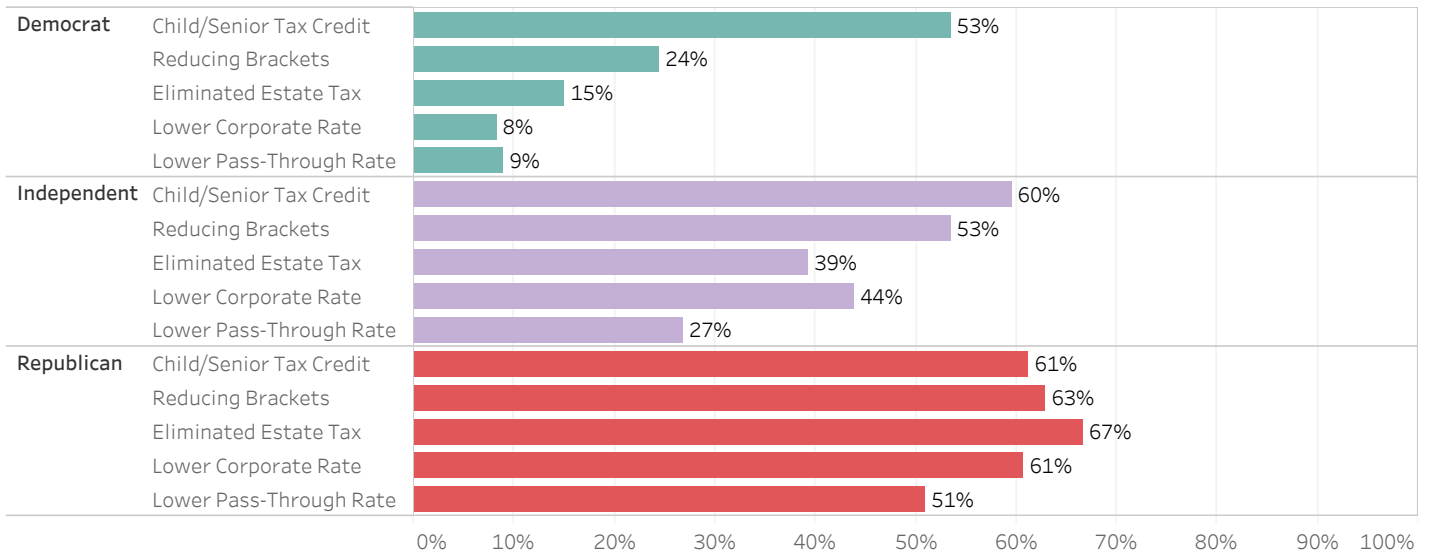

Democrats are opposed to nearly all of these potential tax provisions. Just over half (53%) favor increasing the current child tax credit and creating a new elder/sick care tax credit but less than a quarter support any of the other provisions.

A majority of Independents favor increasing the child tax credit and creating a new elder/sick care tax credit (60%), as well as reducing the number of tax brackets (53%), but fewer favor eliminating the estate tax (39%) or lowering the pass-through rate (27%).

Republicans are consistently in favor of each of these potential tax provisions. They are most likely to favor eliminating the estate tax (67%) and least likely to favor lowering the pass-through rate (51%), though a slim majority still favor this change.

Support for Tax Provisions by Party ID

Self-described conservatives, those who voted for Donald Trump in 2016, and those who watch Fox News are more likely than others to favor all of these provisions except increasing the child tax credit and creating a new elder/sick care tax credit. Respondents who primarily get their national news through newspapers, those who voted for Hillary Clinton in 2016, and self-described liberals are least likely to favor these changes.

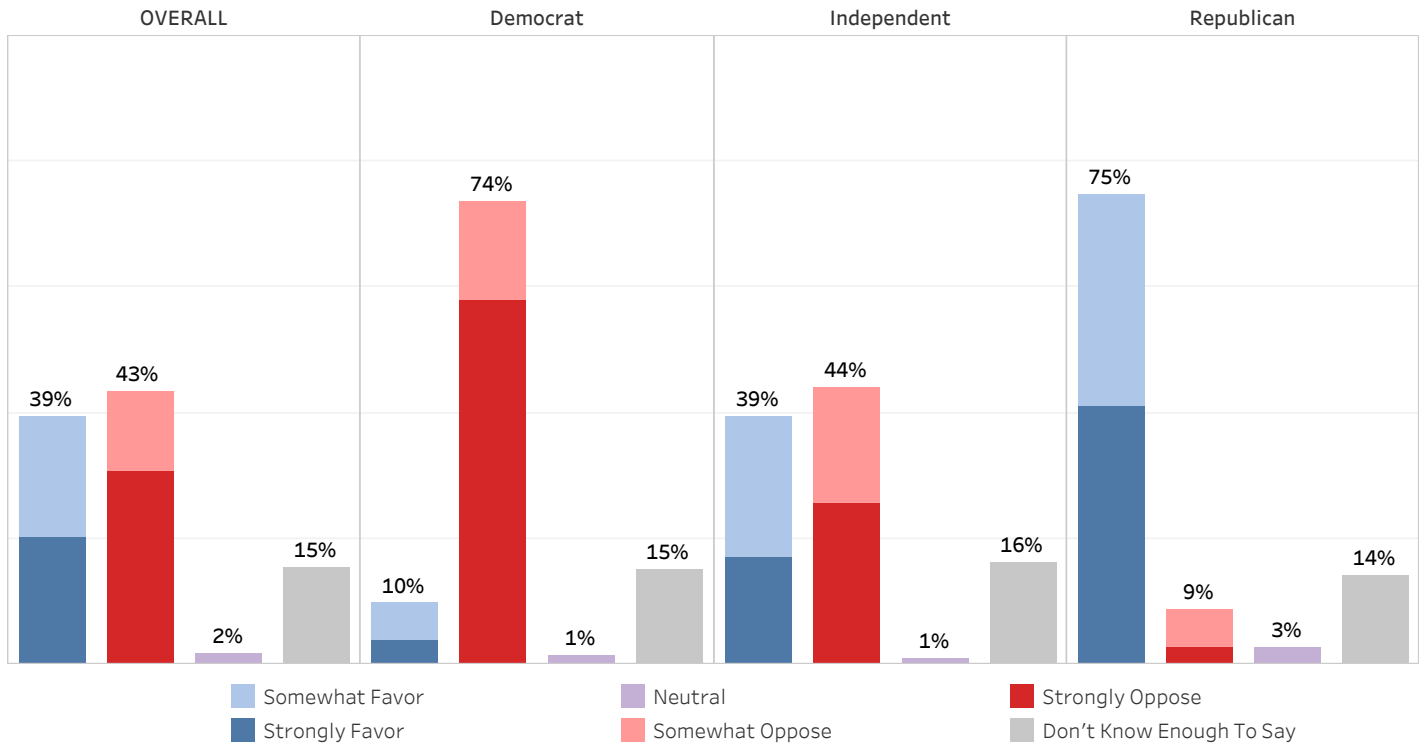

Opinions on increasing the child tax credit and creating a new elder/sick care tax credit are not as closely tied to partisanship as the other potential tax provisions. Respondents who have completed postgraduate work are most likely to favor this element while Manchester Area residents, those who did not vote in 2016, and those aged 18 to 34 are least likely to favor this change.

Overall Opinion on Tax Proposal

New Hampshire residents are closely divided in their opinion on a tax proposal that would feature the preceding individual elements; 39% say they would strongly (20%) or somewhat (19%) support such a proposal, 43% say they would strongly (31%) or somewhat (13%) oppose it, while 2% are neutral and 15% don't know enough to say.

Democrats are opposed to such a plan - 74% oppose it while only 10% would be in favor - while most Republicans are in favor - 75% favor it while only 9% would oppose it. Independents are divided, with 39% in favor and 44% opposed.

Self-described conservatives, those who voted for Donald Trump in 2016, and those who watch Fox News are most likely to favor such a plan, while those who have completed postgraduate work, those who primarily get their national news through newspapers, those who voted for Hillary Clinton in 2016, and self-described liberals are least likely to favor it.

Granite State Poll Methodology

These findings are based on the latest Granite State Poll, conducted by the University of New Hampshire Survey Center. Nine hundred and fifty-six (956) randomly selected New Hampshire adults were interviewed in English by landline and cellular telephone between October 26 and November 9, 2017. The margin of sampling error for the survey is +/- 3.2 percent. These MSE's have not been adjusted for design effect. The design effect for the survey is 1.3%.

The random sample used in the Granite State Poll was purchased from Marketing Systems Group (MSG), Horsham, PA. MSG screens each selected telephone number to eliminate non-working numbers, disconnected numbers, and business numbers to improve the efficiency of the sample, reducing the amount of time interviewers spend calling non-usable numbers.

The data have been weighted to adjust for numbers of adults and telephone lines within households. Additionally, data were weighted by respondent sex, age, education, and region of the state to targets from the most recent American Community Survey (ACS) conducted by the U.S. Census Bureau. In addition to potential sampling error, all surveys have other potential sources of non-sampling error including question order effects, question wording effects, and non-response. Due to rounding, percentages may not sum to 100%. The number of respondents in each demographic below may not equal the number reported in cross-tabulation tables as some respondents choose not to answer some questions.

For more information about the methodology used in the Granite State Poll, contact Dr. Andrew Smith at (603) 862-2226 or by email at andrew.smith@unh.edu.
