BULLETIN OF THE UNIVERSITY OF NEW HAMPSHIRE

Graduate School Issue—1965-1966
University Calendar

1965

Summer Session
June 28, Monday  Registration, eight-week session and first four-week session
June 29, Tuesday  First day of classes
July 12, Monday  Registration, six-week session
July 13, Tuesday  First day of classes
July 26, Monday  Registration and first day of classes, second four-week session
August 20, Friday  Classes end

Semester I
August 27, Friday  Last day for application for admission to graduate study for Semester I
September 17, Friday  First Faculty meeting
September 21, Tuesday  Registration
September 22, Wednesday  Classes start
November 23, Tuesday  Thanksgiving recess starts, 7:00 p.m.
November 29, Monday  Classes resume, 8:00 a.m.
November 29, Monday  Last day for filing applications for graduate scholarships for second semester
December 17, Friday  Christmas recess starts, 7:00 p.m.

1966

January 3, Monday  Classes resume, 8:00 a.m.
January 3, Monday  Last day for application for admission to graduate study for Semester II
January 24, Monday  Examinations begin
February 2, Wednesday  Examinations end

Semester II
February 10, Thursday  Registration
February 11, Friday  Classes start
February 11, Friday  Last day for filing applications for graduate scholarships for academic year 1966-67
February 12, Saturday  Classes hold Tuesday schedule
April 1, Friday  Spring recess starts, 7:00 p.m.
April 11, Monday  Classes resume
May 4, Wednesday  Last day for filing application for 1966 Summer Session graduate scholarships
May 6, Friday  Last day for presenting Ph.D. dissertation at Graduate School Office, if degree is to be granted in June
May 20, Friday  Last day for final Ph.D. oral examination, if degree is to be granted in June
May 20, Friday  Last day for presenting completed Master's thesis to Graduate School Office, if degree is to be granted in June
May 31, Tuesday  Examinations start
June 9, Thursday  Examinations end
June 12, Sunday  Commencement

Officers and Faculty of the Graduate School
Trustees

His Excellency, John W. King, A.B., M.A., LL.B., LL.D., \textit{ex officio}\nGovernor of New Hampshire

Frank T. Buckley, \textit{ex officio}\nCommissioner of Agriculture

Paul E. Farnum, B.S., M.S., \textit{ex officio}\nCommissioner of Education

John W. McConnell, B.A., Ph.D., D.Sc., \textit{ex officio}\nPresident of the University

Harold E. Hyde, B.S., M.S., Ed.D., \textit{ex officio}\nPresident of Plymouth State College

Roman J. Zorn, B.Ed., Ph.D., \textit{ex officio}\nPresident of Keene State College

Forrest M. Eaton, B.S., Portsmouth (1959-1967)\nChairman of the Board

Dean P. Williamson, B.S., Concord (1960-1968)\nVice Chairman of the Board

J. Arthur Tufts, B.S., M.Ed., Exeter (1962-1965)\nSecretary of the Board

Frank W. Randall, B.S., LL.D., Portsmouth (1936-1968)
Maurice F. Devine, A.B., LL.B., LL.D., Manchester (1949-1966)

J. Fred French, Manchester (1961-1968)

Jean A. Wagner, B.A., Hampton Falls (1962-1966)

Norman C. Berube, B.A., M.D., Manchester (1963-1967)

Richard Blalock, Portsmouth (1963-1967)

Years in parentheses indicate terms of service.
Administrative Officers

John W. McConnell, Ph.D., President of the University
Eugene S. Mills, M.A., Ph.D., Dean of the Graduate School and Professor of Psychology
William H. Drew, M.S., Ph.D., Associate Dean of the Graduate School and Professor of Resource Economics
Robert F. Barlow, Ph.D., Dean of the Whittemore School and Professor of Economics
Robert N. Faiman, M.S., Ph.D., Dean of the College of Technology and Professor of Electrical Engineering
Harry A. Keener, M.S., Ph.D., Dean of the College of Agriculture and Professor of Dairy Science
C. Robert Keesey, B.A., Dean of Students
Everett B. Sackett, M.A., Ph.D., Dean of the College of Liberal Arts and Professor of Education
Donald E. Vincent, B.A., A.M.L.S., A.M., Librarian
Joseph J. Petroski, M.Ed., Ed.D., Director of University Extension, Director of the Summer Session, and Associate Professor of Education

Faculty

Fred E. Allen, D.V.M., Professor of Poultry Science
E. Eugene Allmendinger, M.S., Associate Professor of Mechanical Engineering
Alexander R. Amell, Ph.D., Professor of Chemistry
Kenneth K. Andersen, Ph.D., Assistant Professor of Chemistry
Richard A. Andrews, M.S., Ph.D., Associate Professor of Resource Economics
William H. Annis, M.Ag.Ed., Ed.D., Assistant Professor of Agricultural Education
Richard H. Balomenos, M.A., Ed.D., Assistant Professor of Mathematics
John D. Bardwell, M.Ed., Lecturer in Education
James P. Barrett, M.F., Ph.D., Assistant Professor of Forestry
Edward H. Batho, M.S., Ph.D., Associate Professor of Mathematics
John A. Bergeron, Ph.D., Assistant Professor of Economics
Sylvester H. Bingham, A.M., Ph.D., Professor of English
Fletcher A. Blanchard, Jr., M.S., Associate Professor of Electrical Engineering
Robert L. Blickle, M.S., Ph.D., Professor of Entomology
Melvin T. Bobick, M.A., Ph.D., Associate Professor of Sociology
William E. Bonnice, M.S., Ph.D., Assistant Professor of Mathematics
Arthur C. Borror, M.S., Ph.D., Assistant Professor of Zoology
James R. Bowring, M.A., Ph.D., Professor of Resource Economics
C. Hilton Boynton, M.S., Ph.D., Professor of Dairy Science
Paul E. Bruns, M.F., Ph.D., Professor of Forestry
Wilbur L. Bullock, M.S., Ph.D., Professor of Zoology
David M. Burton, M.A., Ph.D., Assistant Professor of Mathematics
Gordon L. Byers, M.S., Associate Professor of Soil and Water Science
Lawrence J. Cahill, Jr., M.S., Ph.D., Associate Professor of Physics
R. Alberto Casas, A.M., Ph.D., Professor of Spanish
William R. Chesbro, M.S., Ph.D., Assistant Professor of Microbiology
David H. Chittenden, M.S., Ph.D., Assistant Professor of Chemical Engineering
Edward C. Chupp, Ph.D., Associate Professor of Physics
David G. Clark, M.S., Ph.D., Associate Professor of Physics
Ronald R. Clark, M.Eng., Ph.D., Assistant Professor of Electrical Engineering
Walter M. Collins, M.S., Ph.D., Professor of Poultry Science
Nicholas F. Colovos, M.S., Professor of Dairy Science
Robert G. Congdon, Ed.D., Assistant Professor of Psychology
James G. Conklin, M.S., Ph.D., Professor of Entomology
Alan C. Corbett, M.S., D.V.M., Associate Professor of Poultry Science
Robert W. Corell, M.S., Ph.D., Associate Professor of Mechanical Engineering
Albert F. Daggett, M.S., Ph.D., Professor of Chemistry
G. Harris Daggett, M.S., Ph.D., Associate Professor of English
Charles O. Dawson, M.S., Professor of Civil Engineering
Carroll M. Decler, M.B.A., Professor of Business and Economics
John W. Dewdney, M.S., Ph.D., Associate Professor of Physics
Richard S. Dewey, M.A., Ph.D., Professor of Sociology
Robert B. Dishman, A.M., Ph.D., Professor of Government
Peter Dodge, M.A., Ph.D., Associate Professor of Sociology
Edward T. Donovan, B.S., Professor of Mechanical Engineering
Richard Downs, Ph.D., Assistant Professor of Sociology
DAVID D. DRAVES, M.A., PH.D., Associate Professor of Education
WILLIAM R. DUNLOP, D.V.M., V.S., Research Professor of Poultry Science
GERALD M. DUNN, M.S., PH.D., Professor of Agronomy
STUART DUNN, M.S., PH.D., Professor of Botany
OWEN B. DURGIN, M.A., Assistant Professor of Sociology
WALTER N. Durost, M.A., PH.D., Associate Professor of Education
WALTER R. DURYEA, M.A., PH.D., Assistant Professor of Psychology
RUSSELL EGGERT, M.S., Professor of Horticulture
DAVID W. ELLIS, PH.D., Assistant Professor of Chemistry
STEPHEN S. T. FAN, M.S., PH.D., Assistant Professor of Chemical Engineering
BENNETT B. FOSTER, M.F., Assistant Professor of Forestry
GEORGE E. FRICK, M.S., Adjunct Professor of Resource Economics
ALBERT D. FROST, A.M., S.C.D., Professor of Electrical Engineering
HERMAN GADON, PH.D., Associate Professor of Business Administration
HENRY M. GEHRHARDT, M.S., PH.D., Assistant Professor of Chemical Engineering
PAUL A. GILMAN, M.S., Associate Professor of Farm Mechanics
ROBERT C. GILMORE, M.A., PH.D., Associate Professor of History
LEWIS C. GOFFE, M.A., PH.D., Associate Professor of English
EARL O. GOODMAN, ED.D., Associate Professor of Home Economics
ROBERT W. GOODRICH, M.S.E.E., Assistant Professor of Electrical Engineering
HERBERT W. GRAHAM, M.A., PH.D., Lecturer in Zoology
WILLIAM GREENLEAF, M.A., PH.D., Associate Professor of History
HELmut M. HAENDLER, PH.D., Professor of Chemistry
GEORGE J. HAGEAGE, M.S., PH.D., Assistant Professor of Microbiology
HARRY H. HALL, PH.D., Professor of Physics
GEORGE M. HASLERUD, PH.D., Professor of Psychology
HANS HEILBRONNER, A.M., PH.D., Associate Professor of History
WILLIAM F. HENRY, M.S., Professor of Resource Economics
EDWARD J. HERBST, M.S., PH.D., Professor of Biochemistry
LERoy J. HIGGINS, B.S., Associate Professor of Agronomy
JOHN L. HILL, M.S., D.F., Associate Professor of Forestry
FREDERICK G. Hochgraf, M.S., Assistant Professor of Mechanical Engineering
HAROLD W. HOCKER, JR., M.F., D.F., Associate Professor of Forestry
ALBION R. HODGDON, M.S., PH.D., Professor of Botany
John A. Hogan, m.a., ph.d., Carter Professor of Economics
John T. Holden, m.a., ph.d., Professor of Government
James B. Holter, m.s., ph.d., Assistant Professor of Dairy Science
Frank K. Hoornbeek, m.s., ph.d., Assistant Professor of Zoology
Robert E. Houston, Jr., m.s., ph.d., Associate Professor of Physics
S. Kenneth Howard, m.a., ph.d., Assistant Professor of Government
John B. Hraba, m.eng., ph.d., Professor of Electrical Engineering
Louis J. Hudon, m.a., ph.d., Professor of French
Harold A. Iddles, m.s., ph.d., Professor of Chemistry
Miyoshi Ikawa, m.s., ph.d., Professor of Biochemistry
Roselmina M. Indrisano, m.ed., ed.d., Assistant Professor of Education
Manley R. Irwin, m.a., ph.d., Assistant Professor of Economics
Robert M. Isherwood, m.a., ph.d., Assistant Professor of History
A. Robb Jacoby, s.m., ph.d., Associate Professor of Mathematics
Erwin A. Jaffe, m.a., ph.d., Associate Professor of Government
Marion E. James, a.m., ph.d., Associate Professor of History
Charles A. Jellison, Jr., m.a., ph.d., Associate Professor of History
Frederick M. Jervis, m.a., ph.d., Associate Professor of Psychology
Paul R. Jones, ph.d., Associate Professor of Chemistry
William R. Jones, a.m., ph.d., Assistant Professor of History
Richard L. Kaufman, m.s., ph.d., Assistant Professor of Physics
Tenho S. Kauppinen, m.s., Associate Professor of Mechanical Engineering
Brian R. Kay, m.a., ph.d., Professor of Psychology
Robert O. Kimball, m.a., Assistant Professor of Mathematics
Roland B. Kimball, ed.m., ed.d., Professor of Education
Robert J. Kispert, m.a., ph.d., Associate Professor of English
Wayne S. Koch, ed.m., Professor of Education
Shan S. Kuo, m.s., m.e., d.eng., Professor of Applied Mathematics
Dwight R. Ladd, m.b.a., d.b.a., Professor of Business Administration
Robert H. Lambert, m.s., ph.d., Assistant Professor of Physics
Clarence A. Langer, m.s., ph.d., Associate Professor of Horticulture
Harold E. Langley, sc.d., Associate Professor of Civil Engineering
Irvin Lavine, ph.d., Professor of Chemical Engineering
Nobel K. Peterson, M.S., Ph.D., Associate Professor of Soil and Water Science
Frank L. Pilar, M.S., Ph.D., Associate Professor of Chemistry
Solomon Poll, M.A., Ph.D., Associate Professor of Sociology
Allan B. Prince, Ph.D., Professor of Soil and Water Science
M. Elizabeth Rand, M.Ed., Associate Professor of Home Economics
Hermann W. Reske, M.A., Ph.D., Associate Professor of German
Hildegard S. Reske, A.B., Lecturer in German
Avery E. Rich, M.S., Ph.D., Professor of Botany
Mathias C. Richards, Ph.D., Professor of Botany
Edythe T. Richardson, M.S., Professor of Zoology
John C. Richardson, M.A., Ph.D., Associate Professor of English
Richard C. Ringrose, Ph.D., Professor of Poultry Science
Owen M. Rogers, M.S., Ph.D., Assistant Professor of Horticulture
Sam Rosen, A.M., Ph.D., Professor of Economics
Shepley L. Ross, M.A., Ph.D., Associate Professor of Mathematics
Kenneth J. Rothwell, M.A., Ph.D., Associate Professor of Economics
Douglas G. Routley, M.S., Ph.D., Associate Professor of Biochemistry
Edward F. Rutledge, M.A., Ph.D., Assistant Professor of Psychology
Albert K. Sawyer, M.S., Associate Professor of Chemistry
Philip J. Sawyer, M.S., Ph.D., Associate Professor of Zoology
Paul E. Schaefer, M.S., Ph.D., Associate Professor of Zoology
Richard W. Schreiber, M.S., Ph.D., Associate Professor of Botany
J. Howard Schultz, M.A., Ph.D., Professor of English
Stanley R. Shimer, M.S., Professor of Biochemistry
Robert J. Silverman, M.S., Ph.D., Professor of Mathematics
Robert E. Simpson, A.M., Ph.D., Assistant Professor of Physics
Russell R. Skelton, S.M., Professor of Civil Engineering
Winthrop C. Skoglund, M.S., Ph.D., Professor of Poultry Science
Lawrence W. Slanetz, Ph.D., Professor of Microbiology
Gerald L. Smith, M.S., Associate Professor of Animal Science
Samuel C. Smith, M.S., Ph.D., Assistant Professor of Poultry Science and Biochemistry
Burton C. Staugaard, M.S., Ph.D., Assistant Professor of Zoology
Samuel J. Stokes, Jr., M.A., Ph.D., Associate Professor of French
E. Howard Stolworthy, B.S., Professor of Mechanical Engineering
Deborah E. Stone, Ed.M., Assistant Professor of Education
Kerwin C. Stotz, M.S., Ph.D., Associate Professor of Electrical Engineering
Richard G. Strout, m.s., ph.d., Associate Professor of Poultry Science
Emery F. Swan, ph.d., Professor of Zoology
Arthur E. Teeri, m.s., ph.d., Professor of Biochemistry
J. Roger Teller, m.a., ph.d., Assistant Professor of Mathematics
Loring V. Tirrell, m.s., Professor of Animal Science
Harry J. Turner, m.s., Lecturer in Zoology
Jacob J. Uebel, m.s., ph.d., Assistant Professor of Chemistry
Dale S. Underwood, m.a., ph.d., Professor of English
Russell L. Valentine, m.s., Associate Professor of Mechanical Engineering
Oliver P. Wallace, Sr., m.f., ph.d., Associate Professor of Forestry
Tung Ming Wang, m.s.c.e., ph.d., Associate Professor of Civil Engineering
James H. Weber, ph.d., Assistant Professor of Chemistry
Robert C. Webster, m.a., Professor of English
Richard R. Weyrick, m.f., Assistant Professor of Forestry
Charles M. Wheeler, Jr., m.s., ph.d., Associate Professor of Chemistry
Thomas A. Williams, m.a., Associate Professor of English
John A. Wilson, m.s., Assistant Professor of Mechanical Engineering
Alden L. Winn, s.m.e.e., Professor of Electrical Engineering
William G. Witthoft, s.m., ph.d., Assistant Professor of Mathematics
Ruth J. Woodruff, a.m., ph.d., Professor of Economics
Paul A. Wright, a.m., ph.d., Professor of Zoology
Dwayne E. Wrightsman, m.b.a., ph.d., Assistant Professor of Finance
Frederick W. Wurzburg, m.a., ph.d., Assistant Professor of Government
Marjory A. Wybourn, m.a., ed.d., Professor of Home Economics
Wei Tseng Yang, m.s., d.eng., Assistant Professor of Mechanical Engineering
Eugene N. Yarrington, m.a., ph.d., Assistant Professor of English
Oswald T. Zimmerman, m.s.e., ph.d., Professor of Chemical Engineering
J. Harold Zoller, ph.d., Professor of Civil Engineering
Committees of the Graduate School

Graduate Council

President John W. McConnell, Dean Eugene S. Mills (Chairman), Associate Dean William H. Drew, Professors Alexander R. Amell, Gerald M. Dunn, Roland B. Kimball, M. Evans Munroe, Hermann W. Reske, Sam Rosen, Paul A. Wright (Secretary).

Graduate Scholarships

Professors Joseph B. Murdoch (Chairman), Erwin A. Jaffe, Dwight R. Ladd, Douglas G. Routley.
Regulations of the Graduate School
General Information

The Graduate School, which has offered instruction since 1903, has for its objective the bringing together of faculty and qualified students in a spirit of scholarship and research. The graduate student is given opportunity to specialize in some field of knowledge, and to develop a maturity of thought and attitude toward his professional field, so that both his professional and his cultural life are enhanced.

The work of the Graduate School is under the general direction of the Graduate Faculty. The Dean of the Graduate School is responsible for the administration of the regulations and requirements pertaining to admission, conduct of work, the granting of advanced degrees, and other pertinent matters.

Graduate programs are offered in the following disciplines: Animal Sciences, Biochemistry, Biology, Botany, Chemical Engineering, Chemistry, Civil Engineering, Electrical Engineering, Entomology, Forestry, Genetics, Home Economics, Mathematics, Mechanical Engineering, Microbiology, Physics, Plant Science, Resource Economics, Soil and Water Science, and Zoology leading to the Master of Science degree; Economics, English, Foreign Languages and Literatures, Government, History, Psychology, and Sociology leading to the Master of Arts degree; Education leading to the Master of Education degree; and Agricultural Education leading to the Master of Agricultural Education degree. There is also a program leading to the Master of Science for Teachers degree in the Chemistry, English, Foreign Languages and Literatures, Mathematics, and Physics departments and a program leading to the Master of Public Administration degree in the Government Department.

Graduate programs leading to the degree of Doctor of Philosophy are offered in Botany, Chemistry, Genetics, Mathematics, Microbiology, Physics, Plant Science (Horticulture), and Zoology.

Graduate students are defined as those who meet the requirements for admission to the Graduate School and are registered for an approved program for graduate credit.
General Regulations

Admission

Admission to the Graduate School may be granted to graduates of all colleges and universities of approved standing, provided their undergraduate records are satisfactory. Before entering upon graduate work the applicant must present evidence that he has had the necessary prerequisite training which will enable him to pursue with benefit the courses desired. A candidate for admission must have had a cumulative undergraduate record of not less than a 2.5 grade-point average on a grading scale in which A equals 4.0, B equals 3.0, C equals 2.0, D equals 1.0, or the equivalent, for his undergraduate program of study. In addition the candidate for admission may be required to take an achievement test, where the department in which the candidate plans to do his work so requires. These general requirements for admission to the Graduate School are in addition to the special requirements set up by individual departments or to those of the program leading to the Master of Science for Teachers degree that presupposes certification as a teacher or its equivalent. For the individual departmental requirements, see the description under the departmental offerings in this bulletin.

A student who desires to register for graduate study must submit to the Dean of the Graduate School the official application for admission to graduate study. Forms for this purpose may be obtained by writing to the Dean of the Graduate School, University of New Hampshire, Durham, New Hampshire. The application must be accompanied by two official transcripts of the student’s undergraduate work and of any previous graduate work, and by two letters of reference. Transcripts of applicants who are admitted to graduate study become a permanent part of the University files and will not be returned.

Applications for admission to the Graduate School should be submitted before September 1 for the first semester, before January 1 for the second semester, and before May 15 for the Summer Session to guarantee action before the respective registration days. Applications will be accepted after the dates mentioned above provided that the applications are accompanied by complete official transcripts; but it may be necessary in such instances to postpone the evaluation of credentials and the determination of requirements until after the registration period.

Foreign students applying for admission to the Graduate School should include proof of their ability to handle the Eng-
lish language. In all cases, certification from the American Consulate is required.

All regularly enrolled graduate students must have a medical history and physical examination report on file with the Director of the University Health Service. Recent graduates of the University of New Hampshire need not file a new set of reports upon being admitted to the Graduate School. Others should obtain the proper forms from the Dean of the Graduate School.

Admission to the Graduate School does not imply admission to candidacy for a degree. No graduate student is admitted to candidacy for a degree until he has been in residence a sufficient time to enable his instructors to judge his ability to carry on graduate work. Generally this period of time shall be not less than that required for the completion of 12 credits of graduate work for the Master's Degree, and the passing of the qualifying examination and the completion of the language requirements for the Ph.D. degree. Admission to candidacy for a degree will be determined by the Dean upon the recommendation of the department concerned. The student will be notified by the Dean, in writing, of the decision made.

A student admitted to graduate study must have his program approved by the chairman of his department or of his guidance committee and the Dean of the Graduate School. Registration is held prior to the beginning of classes each semester and on the first day of Summer Session. Consult the calendar in this bulletin for the dates of registration.

The maximum graduate load allowed is 16 semester credits for a regular semester, seven credits for a six-week Summer Session and nine credits for an eight-week Summer Session. Only under unusual circumstances will excess credits be allowed, and then only with the approval of the Dean of the Graduate School.

Graduate Credits

Graduate credits may be earned only in courses numbered from 600 through 898, and in the thesis, but graduate credits will not be given in any courses so numbered which are open to freshmen or sophomores.

Graduate students who desire to do a part of their work during the Summer Session of the University will find graduate courses offered in many departments. Credit in appropriate courses may be used in fulfilling the requirements for an advanced degree. For complete information on the Summer Session see the Summer Session issue of the Bulletin of the University of New Hampshire.
Qualified senior students in the University of New Hampshire may be admitted to the Graduate School, and must have been admitted before taking courses for graduate credit. Such seniors may not substitute courses for which they registered in an undergraduate program for those for which they registered in a graduate program.

Students holding the baccalaureate degree who have not been admitted to the Graduate School, but who wish to register for graduate courses, must receive the approval of the Dean of the Graduate School and of the instructor concerned.

An incomplete grade in the Graduate School must be made up within a year after the course was to have been completed. This rule does not apply to the completion of the thesis.

The student must meet the special requirements of the department in which he is doing his graduate work and his program must be approved by his adviser and the Dean of the Graduate School. For these special requirements see the department statements in this bulletin.

Tuition

The tuition is $380 a year for residents of New Hampshire, and $925 a year for non-residents. Tuition rates in the Summer Session and for courses offered by the University Extension Service are listed in their respective catalogues.

Any student registering for eight credits or more per semester will pay the full semester tuition. Any student registering for fewer than eight credits per semester shall pay $22.50 per credit hour. In certain instances Graduate Assistants may be exempted from payment of tuition.

A doctoral student who is registered for fewer than eight credits and is pursuing research for the dissertation shall pay by the credit hour, plus a research charge of $50 a semester. If registered for research only, the charge of $50 a semester will be applicable and will carry with it the privilege of attending seminars. A doctoral student is defined as one who has completed 30 graduate credits with a grade of B or better, or has received a Master's degree.

When a doctoral candidate completes his requirements in absentia, a charge of $50 for the privilege of taking the final examination must be paid six weeks before the conferring of the degree.

A Memorial Union assessment of $6.00 per semester must be paid by each student.

The immediate families of members of the University staff may register as full or part-time students in the Graduate School
at one-half the current tuition or course rate. They are required, however, to pay the full research fee, if doctoral students.

The University reserves the right to adjust charges for such items as tuition, board, and room rent from time to time. Such changes will be held to a minimum and will be announced as far in advance as feasible.

**Living Facilities**

In addition to 98 apartments for faculty and married students, the University operates residence halls, for up to 100 single graduate students. Room assignments are made in the order of receipt of the applications. Requests for applications for rooms should be made directly to University Housing, Thompson Hall.

Off-campus accommodations are best secured by personal survey, but partial listings are maintained by the University Housing Office. The University, however, can assume no responsibility for living accommodations contracted between landlords and individuals.

The University operates on a self-service basis a modern dining hall. Regular weekly board and cafeteria service are provided at approximately $14.00.

**Assistantships, Scholarships and Fellowships**

Approximately 145 graduate assistantships are available each year. Such assistantships are awarded only to superior students. The re-appointment of a Graduate Assistant is contingent on the maintenance of a high level of scholarship. The service required of the Graduate Assistant may be in the nature of (a) teaching assistance, (b) research assistance, or (c) general service.

There are two categories of regular assistantships available. The recommended conditions of employment for each category are as follows:

1. $2400 for the academic year for 20 hours of service per week. Normal academic program: 9 semester hours per semester. Exemption from payment of tuition may be granted for the academic year and the following Summer Session on recommendation of the department chairman.

2. $3360 (10 months at $240, 2 months at $480) for the fiscal year for 20 hours of service per week during 9 months, 44 hours per week for two months, with one month of vacation. Normal academic program: 9 semester hours per semester. Exemption
from payment of tuition for the regular academic year may be granted on the recommendation of the department chairman.

Inquiries regarding assistantships should be addressed to the chairman of the department concerned.

Scholarships and fellowships ranging in value from remission of tuition to over $5,000 per year are available to qualified graduate students.

Up to twenty-five superior students may be granted tuition scholarships. These awards are subject to the maintenance of a high scholastic record in the Graduate School and may be revoked at the end of any semester if the student does not merit such exemption for the subsequent semester. Foreign students will be considered for scholarship awards.

Up to twenty superior students, who have been regularly admitted to the Graduate School, may be granted exemption from Summer Session tuition.

A limited number of three-year fellowships, called University of New Hampshire Fellowships, are awarded to outstanding doctoral students. Each recipient is given an opportunity to spend the first year in full-time study, the second year as a teaching assistant, and the third year as a research assistant. The stipends for this program are $2,400 for the first year and $2,600 and $2,800 for the second and third year respectively. In addition, the award provides $680 of support for each of two summers, waiver of tuition, and an annual allotment of $500 each for as many as two dependents.

A limited number of Alumni Fellowships are available to students following a graduate program in the social sciences and humanities. The stipend is $3,000 per academic year.

A limited number of three-year traineeships sponsored by the National Aeronautics and Space Administration are available for students studying for the Ph.D. degree in Botany, Chemistry, Genetics, Mathematics, Physics, and Zoology. The basic stipend is $2,400 plus remission of tuition for twelve months’ study. In addition, up to $1,000 may be awarded for dependency and escalation.

Graduate students also are eligible for fellowship awards granted by the National Science Foundation, the Public Health Service, the Woodrow Wilson Foundation, and other national agencies, and for fellowships awarded under the National Defense Education Act. The University participates in the National Science Foundation Cooperative Fellowship Program and in the National Science Foundation Program of Summer Fellowships for Graduate Teaching Assistants. Information concerning these
programs may be obtained at the Office of the Graduate School.

The George F. Dwinell Memorial Fellowship Fund of the New Hampshire Cancer Society, Inc., is provided, on a yearly basis, to promote the interest of young people in investigative work on growth. Selection of the recipients of these awards is determined by a University Committee.

A limited number of Summer Fellowships for Teaching Assistants are available for students who have held teaching assistantships during the previous academic year. The stipend for summer study is $680.

Information and application forms concerning all of the above scholarship and fellowship programs may be obtained from the Dean of the Graduate School.

A fellowship program for M.A. candidates from developing foreign countries is provided in cooperation with the Phillips Exeter Academy. These fellowships provide students with 15 months’ residence at nearby Phillips Exeter Academy and close collaboration in the life of a secondary boarding school for boys while studying for a Master’s degree at the University of New Hampshire. Each fellowship carries a stipend of $100 monthly, room and board at Phillips Exeter Academy, transportation to the University, tuition, and necessary textbooks. For further information write to the Chairman, Foreign Fellowship Program, Abbot Hall, Exeter, New Hampshire.

Properly qualified scholars, who may desire temporarily the privileges of the library and research facilities of the University, and who are not candidates for a degree, may, upon recommendation of the Dean of the Graduate School and the approval of the President of the University, be appointed Honorary Fellows without stipend. Honorary Fellows shall not be required to pay any charges except possibly the cost of unusually expensive supplies or equipment.

Requirements for the Master’s Degree

For the degrees of Master of Arts, Master of Science, and Master of Agricultural Education, at least 30 credits must be earned, including a minimum of eight credits in courses, not including thesis, numbered 800-898. Courses numbered 600-699 cannot be used towards these Master’s degrees if the courses are given in the department awarding the degree. No more than 12 credits will be permitted in courses numbered 600-699. The
major department will prescribe for its students the courses which make up the degree program. See departmental statements for further details on requirements.

The Master of Science for Teachers degree is designed for the experienced and certified teacher who is interested in improving his understanding of the subject matter that he teaches. Thirty credits must be earned and, at the discretion of the department, a comprehensive final examination successfully passed. A departmental guidance committee plans the program, subject to the approval of the Dean of the Graduate School and a special committee of the Graduate Faculty; it also administers the final examination, if required.

The requirements for the Master of Education degree, somewhat different from those above, are listed in the course descriptions of the Department of Education.

A student will normally spend at least one calendar year, or the equivalent, on the degree. No more than 12 credits, not including thesis, may be earned off campus. Of these 12, only 6 may be from another graduate school.

All graduate work for any Master's degree must be completed in not more than eight years from the time of registration for the first work taken for the degree.

Students in the Master's degree programs must earn a grade of A or B in all courses for which a letter grade is given. The grade of Cr. (credit) is given for the thesis. Any graduate student who receives a grade of below B in nine or more credits will be required to withdraw from the Graduate School.

In any department or program requiring a final examination for the Master's degree, the examination may be oral, written, or both. A candidate will be permitted only two opportunities to take the final examinations for the Master's degree, and the time of these examinations will be at the convenience of the department concerned, except that all such examinations must be given at least two weeks before the Commencement date in the year in which the degree is to be conferred. Further regulations governing the final written examination, when required, will be made by the department concerned, subject to the approval of the Dean of the Graduate School. Oral examining committees, when required and not otherwise provided for, will be appointed by the Dean of the Graduate School upon the recommendation of the department concerned. The Dean of the Graduate School, is, ex officio, a member of all examining committees.

A student may present for credit a maximum of six credits earned at another graduate school provided that these credits are of a grade of at least B or the equivalent. These will be ap-
plied toward the degree only if approved by the major department and the Dean of the Graduate School.

**Thesis**

A thesis may be required of candidates for the Master of Arts or the Master of Science degrees. Consult the departmental statement for thesis requirements.

The thesis must be approved by a committee of three, comprising the instructor under whose direction it was written and two other members of the Graduate Faculty selected by the department chairman and approved by the Dean of the Graduate School.

Each department will determine the date when the candidate must submit for approval a statement of the subject of the thesis and the date when the thesis must be completed.

The number of thesis credits may vary from six to ten, subject to the approval of the student’s adviser.

No thesis credit shall be given until the completed thesis has been approved by the committee on the thesis. No letter grade shall be given for the thesis, but its satisfactory acceptance will be recorded with a Cr. (credit).

The student should obtain from the Graduate School office the latest mimeographed regulations for the form and typing of theses.

Whenever a thesis is printed, it must be designated as having been accepted as a Master’s thesis by the University of New Hampshire.

Two copies of the approved thesis, ready for binding, shall be turned in to the Graduate School office not less than two weeks before Commencement, together with a receipt for the binding fee from the University Bookstore. Most departments require one copy of the thesis in addition to the above-mentioned two copies. (See departmental requirements in this bulletin.)

**Requirements for the Doctor’s Degree**

The degree of Doctor of Philosophy is conferred on qualified candidates who have passed an oral or written examination on the subject matter of their field of study, who have completed an original investigation in this field and have embodied the results in an acceptable dissertation, and who have passed an
oral examination in defense of the dissertation. The degree of Doctor of Philosophy is essentially a research degree. It is not given merely for the completion of course credits. Graduate programs leading to the degree of Doctor of Philosophy are offered in Botany, Chemistry, Genetics, Mathematics, Microbiology, Physics, Plant Science (Horticulture), and Zoology.

All resident predoctoral students must register each semester until requirements for the degree have been completed. The minimum requirement for the doctorate is three years beyond the bachelor’s degree. Resident graduate work done at other universities may be counted toward the minimum requirement upon approval of the Guidance Committee and the Dean of the Graduate School, but one full academic year must be in residence at the University of New Hampshire. In individual cases, the major department and the Dean of the Graduate School may grant permission to pursue the research for the dissertation at another institution where access to special facilities may be advantageous.

**General Requirements**

A student working for the Ph.D. degree must earn grades of A or B in all the courses required by his guidance committee. Certain courses may be taken for audit. A grade of Cr. (credit) is given for the completed dissertation.

When the student declares his intention to proceed to candidacy for the degree of Doctor of Philosophy, the department of intended major concentration shall notify the Dean of the Graduate School, who then, upon recommendation of the department, will appoint a guidance committee. This committee will assist the student in outlining his program and in preparing him for his qualifying examination. To prepare him for the qualifying examination and successful pursuit of his research and course work, the guidance committee may require him to take additional course work, with or without credit.

At the time of application by the student for the qualifying examination, a doctoral committee will be appointed to supervise the qualifying and final examinations and to pass on the dissertation. This committee shall be nominated by the department of major concentration and appointed by the Dean of the Graduate School. It shall consist of a minimum of five members, usually three from the major department and two from related departments, and the Dean of the Graduate School, ex officio.

The qualifying examination may be written or oral, or both. This examination will test: (1) the student’s general knowledge
in his major and minor work, and (2) his fitness for engaging in research, particularly in the subject proposed for the dissertation. The results of the examination will be communicated by the chairman of the major department to the Dean of the Graduate School.

The student may not be advanced to candidacy for the Ph.D. until he has passed the qualifying examination and has completed the requirements for foreign languages to the satisfaction of the major department. The proposed subject of the student’s dissertation must be declared at the time of application for advancement to candidacy. Resident full-time members of the University of New Hampshire faculty with rank of Assistant Professor or higher may not be admitted to candidacy for the Ph.D. at this University.

The dissertation must be a mature and competent piece of writing, a contribution to knowledge, embodying the results of significant and original research.

A copy of the completed dissertation must be made available to the Dean of the Graduate School and to the members of the examining committee two weeks before the final examination date. Following the examination and two weeks prior to Commencement, two copies of the approved thesis, ready for binding, shall be turned in to the Graduate Office, together with a receipt for the binding fee from the University Bookstore. Publication of the dissertation by University Microfilms will be required, and the cost will be assumed by the student. If the material presented in the dissertation is published, it should be designated as having been accepted as a doctoral dissertation by the University of New Hampshire.

The final oral examination is conducted by the doctoral committee and is intended to give the candidate an opportunity to defend his dissertation. A written final examination, on subject matter not covered in the qualifying examination, may also be required. This written examination is conducted by the major department. The final examinations must be completed at least two weeks prior to the date of receiving the degree. After consultation with the major department, the Dean may appoint, for participation in the final oral examination, additional members of the faculty under whom the student has worked. The doctoral committee alone shall decide on the merits of the candidate’s performance by a majority vote.
University Services

The Counseling Center provides professionally qualified assistance to students who are dissatisfied with some aspect of their academic functioning or who have personal or emotional problems which interfere with their educational experience. The services of the Counseling Center are not limited to those with "serious" problems but are geared to the needs of the normal college student who seeks to achieve more personal effectiveness and greater self-understanding. In addition to the direct help the Center gives to students, the staff is also available to members of the faculty and staff on a consultation basis.

The University Health Service, located in Hood House, is devoted to the protection, improvement, and maintenance of student health. Graduate students carrying 8 or more credits, and graduate assistants, are eligible for treatment. A well-equipped out-patient clinic for diagnosis and treatment of ambulatory patients and a modern infirmary of 26 beds, with an isolation division for communicable diseases, is constantly available for students who require care during the periods when the University is in session. Registered nurses are on duty at all times. Hood House is open 24 hours daily. Individual health guidance is given through personal conferences with the University Physician.

The Health Service is closed when the University is officially closed for holidays; closing one hour after the dormitories are secured, and opening at 3 p.m. on the day before classes start. During the summer session Hood House is open Monday through Friday from 8 a.m. to 4 p.m.

Injury and illness which require hospital confinement other than in Hood House, services of specialists, operations, ambulance service, special nurse, or special prescriptions are at the expense of the student. Bed patients at Hood House are charged $4.00 per day. Office hours of the University Physician are from 9:00 a.m. to 4:00 p.m. daily except Saturdays and Sundays.

In addition to the health service available through Hood House, group accident and sickness insurance giving 12 months' coverage is available to students at the University. This insurance coverage is designed to supplement the program of the University. Complete details may be had on application to the Business Office, Thompson Hall.
The Memorial Union is a campus center for outside-the-classroom activities for the University community. It provides social, recreational, and educational meeting rooms, games rooms, and meals and snacks, as well as headquarters for a number of student organizations. The Union Staff reserve rooms for organizations to meet in the Memorial Union and in other University buildings and serve as a central source of campus information. A program of activities for all students is planned by the all-student board of governors of the Memorial Union Student Organization.

The Memorial Union is a gift of the citizens of New Hampshire, the students, the alumni, the faculty and staff, and other friends of the University. The building serves three principal purposes: as a living memorial to the men and women of the State of New Hampshire who have sacrificed their lives in our armed forces, as a college union, and as a state-wide conference center.

The Testing Service conducts the University Orientation testing program and administers supplementary tests when deemed necessary for individual educational and vocational planning. Arrangements for individual testing are made when students are referred by advisers, deans, the Placement Service and the Counseling Center. National tests required by graduate schools are available through the Service by appointment.

The employment services of the Placement Office are available to all degree candidates who have completed at least 12 semester hours of work toward their degree. After a candidate completes registration papers he may schedule appointments with companies who recruit at the University during the months of December, January, February, and March. In addition to industrial, business, and governmental recruiting guests, over fifty school systems will be recruiting on campus. A placement registrant’s papers can be forwarded to any employment contact in the U. S.

Those individuals who have received an advanced degree from the University of New Hampshire automatically become members of the Alumni Association. The present membership of the Association exceeds 23,000 men and women who represent New Hampshire College and University of New Hampshire classes from 1883 through the present. Alumni reside in every state of the Union as well as in many foreign countries.

Governed by a Board of Directors of 15 elected and 2 ex officio members, the alumni are organized by classes and clubs. Class
reunions are held annually. An annual Homecoming Day in the fall provides opportunity for alumni to return to Durham while the University is in session. Other alumni gatherings on campus are also scheduled from time to time during the academic year. There are 48 UNH alumni clubs throughout the United States. A monthly magazine, The New Hampshire Alumnus, circulates news of students, faculty, alumni, and the University to subscribers. From offices in Alumni House on the campus, the Association's activities are directed by a permanent Director of Alumni Affairs and his staff.
Beginning with the academic year 1964-65, a new system of course numbering went into effect. If the numerals designating a course running through both semesters are connected by a hyphen, the first semester’s work or its equivalent is a prerequisite to the second. If the numerals are separated by a comma, properly qualified students may take the second semester’s work without having had the first.

Courses numbered 800 and above are open only to those admissible to graduate study. Courses numbered 700 through 799 are open to graduate and advanced undergraduate students. In unusual circumstances, and at the discretion of the department in which the student is admitted to graduate study, courses numbered 600-699 may be used towards the Master’s degree; however, courses in this series cannot be used towards that degree if they are given in the department awarding the degree. A complete listing of “600” courses appears in the University of New Hampshire undergraduate catalogue.

The Graduate School reserves the right not to offer an announced course when valid reasons arise.
Departmental Requirements and Description of Courses

Agricultural Education (22)

William H. Annis, Program Chairman

The degree of Master of Agricultural Education is designed for teachers of agriculture, County Cooperative Extension personnel, and others in adult education.

A comprehensive examination will be required of all candidates for this degree.

801. Advanced Methods in Agricultural Mechanics Instruction

Agricultural mechanics problems and how to approach them in the high school as a part of the course of study in vocational agriculture. The physical setup, as well as the processing of supplies and equipment, methods of supervision and direction of agricultural mechanics projects, and the preparation and presentation of demonstrations. Mr. Gilman. 2 cr. (Offered in 1966.)

802. Methods in Teaching the Operation and Maintenance of Farm Tractors

Methods of teaching the servicing and maintenance of the various mechanical systems found on farm tractors. Teaching plans, techniques of instruction, and essential skills. Demonstrations, discussions, and laboratory participation will make up a considerable part of the class work. Mr. Gilman. 2 cr. (Offered in 1967.)

803. Methods in Teaching the Care and Maintenance of Agricultural Machinery

Content includes, in addition to methods in teaching, teaching plans, techniques of instruction, and the essential skills. Demonstrations, discussions, and laboratory participation will make up the balance of the work. Mr. Gilman. 2 cr. (Offered in 1968.)

804. Program Planning in Agricultural Education

The basic problems, principles, and procedures in the process of program planning in vocational agriculture and extension. Mr. Annis. 2 cr. (Offered in 1968.)

805. Planned Agricultural Experience Programs in Vocational Agriculture

Development of cooperative relations, selection and development of individual programs with the students, and the supervision and evaluation of such programs. Mr. Annis. 2 cr. (Offered in 1966.)
806. Preparation and Use of Visual Aids for Agricultural Education
The purpose of visual aids and the kinds best adapted to use in the program, together with their preparation and use. 2 cr. (Offered in 1965.)

807. Organization and Supervision of Youth Organizations
The purposes and organization of youth organizations, establishing the local organization, planning and developing a program of work, ways and means of improving the local organization, and methods of evaluation. 2 cr. (Offered in 1966.)

809. Community Organization and Public Relations
The composition, purposes, and objectives of the various social and economic organizations operating in local communities. The importance of their membership to the general welfare of the area and the development of a public relations program. 2 cr. (Offered in 1968.)

810. Philosophy of Vocational Education
The development of vocational education in the United States with emphasis on the socio-economic influences responsible for its establishment. Its relationship with general education, together with the coordination of instructional programs in the various vocational fields. 2-3 cr.

811. Supervision and Administration of Vocational Education
The Federal and State requirements for vocational education programs in the secondary schools. 2-3 cr. (Offered in 1967.)

895, 896, 897. Investigations in Agricultural Education
Individual study problems in various phases of agricultural education. Prereq.: Permission of staff. 2 cr.

Agronomy
(See Plant Science and Soil and Water Science)

Animal Sciences (25)
(Dairy, Livestock, Poultry)
W. C. Skoglund, Chairman

To be admitted to graduate study in Animal Sciences an applicant is expected to have had sufficient undergraduate training in the basic biological sciences to qualify for special work in this field. A thesis is required and a candidate for the Master's degree shall pass an oral examination covering his graduate courses and thesis.

703. Animal Genetics
The principles of Mendelian and quantitative genetics applied to livestock and poultry; selection and breeding systems in genetics improvement and their evaluation. Mr. Collins. Prereq.: Zool. 706 or permission of instructor. 2 lec.; 1 lab.; 3 cr.
705. **A Review of Animal Husbandry**

The principles and practices relating to the feeding, breeding, selection, and management of beef cattle, horses, sheep, and swine. For teachers of vocational agriculture and other students with the permission of their advisers. Staff. Summer Session only. Two hours daily, lec. and lab.; 2 cr.

706. **A Review of Dairy Science**

Subject matter covering the principles and practices relating to the latest information on dairy cattle breeding, feeding and management, and the processing and marketing of milk and its products. For teachers of vocational agriculture and other students with the permission of their advisers. Staff. Summer Session only. Two hours daily, lec. and lab.; 2 cr.

707. **A Review of Poultry Science**

The principles and practices relating to the latest information on poultry breeding, feeding, diseases, and management. For teachers of vocational agriculture and other students with the permission of their advisers. Staff. Summer Session only. Two hours daily, lec. and lab.; 2 cr.

708. **Advanced Dairy Science**

Basic data, fundamental observations, and discussions of research contributing to the present status of the dairy industry. Mr. Moore. Prereq.: Adequate preparation in chemistry and bacteriology. 2 cr.

710. **Dairy Cattle Nutrition and Management**

Feeding and management of dairy animals, calf feeding, raising young stock, and feeding for economical milk production. Mr. Holter. 2 lec.; 1 lab.; 3 cr.

711-712. **Investigations in (Livestock, Dairy, Poultry)**

Breeding: Mr. G. L. Smith, Mr. Collins, Mr. Morrow
Nutrition: Mr. G. L. Smith, Mr. Ringrose, Mr. Colovos, Mr. Holter
Management: Mr. Tirrell, Mr. Skoglund, Mr. Morrow
Diseases: Mr. Allen, Mr. Corbett, Mr. Dunlop, Mr. Strout, Mr. S. C. Smith
Products: Mr. G. L. Smith, Mr. Moore
Light Horsemanship: Mr. Tirrell

Elective only after consultation with the instructor in charge. Hours to be arranged. 1-3 cr. May be repeated.

801. **Advanced Animal Breeding**

Practical breeding problems with beef and dual-purpose cattle, sheep, horses, and hogs. The genetic principles important to successful livestock production. Mr. Tirrell and Mr. G. L. Smith. 2 lec.; 1 lab.; 3 cr.

802. **Meats, Livestock Markets, and Products**

The essential factors in meat selection, cutting, curing, and smoking; study and discussion relative to the problems of livestock marketing and the procedure in the large central markets. Trips are taken to various packing plants. Mr. G. L. Smith. 2 lec.; 1 lab.; 3 cr.

803. **Advanced Animal Nutrition**

Incidental lectures, assigned reading, and laboratory practice in methods of research with major emphasis on protein and energy metabolism. Mr. Colovos. 3 cr.
804. Advanced Dairy Cattle Breeding
The analysis and formulating of breeding programs, principles of milk secretion, and factors influencing the quantity and quality of milk. Mr. Morrow. 2 lec.; 1 lab.; 3 cr.

805-806. Avian Microbiology
The disease process in the intact host at cellular levels when invaded by viruses or virus-like agents, fungi, and protozoans. Physiological and cytopathological changes in tissue culture. Mr. Dunlop, Mr. Strout, and Mr. Corbett. Prereq.: An. Sci. 602 or the equivalent. 3 cr.

807-808. Avian Histopathology
First semester: general histopathology. Second semester: the special histopathology of common diseases with emphasis on tumors and tumor formation. Mr. Dunlop and Mr. Strout. Prereq.: Histology or the equivalent. 3 cr.

809-810. Advanced Poultry Nutrition
Metabolism and the physiology of digestion with emphasis on nutrient needs and deficiency diseases of poultry: Analysis of recent experimental research and current feed problems. Mr. Ringrose. 3 cr.

811-812. Advanced Poultry Genetics
First semester: genetic and environmental variation; methods of statistical analysis fundamental to biological research, including variance components analysis and principles of partitioning hereditary variance. Second semester: principles of quantitative inheritance including changes in gene frequency, selection, inbreeding and outbreeding. Methods of estimating heritability and genetic correlations. Mr. Collins. 3 cr.

897-898. Animal Science Seminar
A survey of recent literature and research in the Animal Sciences. Staff. 1 cr. May be repeated.

899. Thesis
Hours and credits, from 6-10, to be arranged.

Biochemistry (26)
Edward J. Herbst, Chairman

Students admitted to graduate study in Biochemistry are expected to have had preparation in the biological sciences, mathematics, physics, and chemistry. The candidate for the M.S. degree will be required to prepare a thesis, and to pass an oral examination covering his graduate courses and thesis.

751. General Biochemistry
The fundamental principles of biochemistry with emphasis on the chemical properties, principal metabolic pathways, and functions of carbohydrates, lipids, and nitrogenous compounds. Mr. Herbst and Mr. Ikawa. Prereq.: Satisfactory preparation in organic chemistry and quantitative analysis. 3 lec.; 2 lab.; 5 cr.
756. PHYSIOLOGICAL CHEMISTRY AND NUTRITION

An introductory biochemistry course with emphasis on human physiological chemistry and nutrition. The laboratory includes a study of procedures basic to chemical methods used in medical diagnostic work. Mr. Teeri. Prereq.: Satisfactory preparation in organic chemistry. 3 lec.; 2 lab.; 5 cr.

762. PLANT METABOLISM

The function, occurrence, synthesis, and degradation of plant constituents. Major emphasis will be placed on respiration and photosynthesis and their relationship to the metabolism of lipids and nitrogen compounds. Mr. Routley. Prereq.: Biochem. 751 or 756 or equivalent. 2 lec.; 1 lab.; 3 cr.

811. BIOCHEMISTRY OF LIPIDS

The chemistry, metabolism, and function of lipids. Mr. Smith. Prereq.: Biochem. 751 or 756 or equivalent. 2 cr. (Alternate years; not offered in 1965-1966.)

821. PROTEINS AND AMINO ACIDS

The chemistry, metabolism, and function of proteins and amino acids. Mr. Teeri. Prereq.: Biochem. 751 or 756 or equivalent. 2 cr. (Alternate years; offered in 1965-1966.)

832. CARBOHYDRATES

The chemistry, metabolism, and function of carbohydrates and related substances. Mr. Ikawa. Prereq.: Biochem. 751 or 756 or equivalent. 2 cr. (Alternate years; not offered in 1965-1966.)

842. NUCLEIC ACIDS AND NUCLEOPROTEINS

The chemistry and metabolism of nucleic acids and nucleoproteins and their distribution and function in cells. Mr. Herbst. Prereq.: Biochem. 751 or 756 or equivalent. 2 cr. (Alternate years; offered in 1965-1966.)

872. ADVANCED BIOCHEMISTRY LABORATORY

The methods used in biochemical research. Mr. Herbst and staff. Prereq.: Permission of the Department Chairman. 1 lec.; 3 lab.; 4 cr.

895, 896. GRADUATE PROJECTS

Staff. Prereq.: Satisfactory preparation in analytical, organic, and biological chemistry. Subject matter and credits to be arranged.

897, 898. BIOCHEMISTRY SEMINAR

Presentation and discussion of recent investigations. Mr. Herbst and staff. Prereq.: Permission of the Department Chairman. 1 cr.

899. THESIS

To be arranged. 6-10 cr.

Biology (41)

Paul A. Wright, Chairman of Committee

Students admitted to graduate study in Biology must have completed an undergraduate major in Biology or in some field of the biological sciences. Suitable training in the physical
sciences is also necessary. Students who lack undergraduate training in any of the fields of the biological sciences may be required to complete certain courses in these fields which do not carry graduate credit before they are admitted to candidacy for a degree.

Graduate work in Biology is under the direction of a committee consisting of the Chairmen of the departments of Botany, Entomology, Microbiology, and Zoology. This committee shall determine, in light of the student's objectives, courses and requirements to be met by the candidate. Candidates for the Master's degree in Biology shall pass a written examination covering their general preparation in the field. With the permission of the Committee and the prospective Supervisor of the Thesis, a student may elect to submit a thesis in partial fulfillment of the requirements of the Master's degree.

791. Biology-Education. Problems in the Teaching of High-School Biology

Objectives and methods of teaching; the selection and organization of materials; the preparation of visual aids; the setting up of aquaria and other projects. The use of the field trip as a tool in teaching high school biology. Mr. Schaefer. Prereq.: Two years of biological sciences and Principles of Teaching. 2 rec.; 1 lab. or field trip; 3 cr.

For listings of other courses see: Botany, Entomology, Microbiology, and Zoology.

Botany (27)
Albion R. Hodgdon, Chairman

Students admitted to graduate study in Botany are expected to have had adequate preparation in basic Botany courses and in the physical sciences. The candidate for the M.S. degree will be required to pass an oral examination and to prepare a thesis. Thesis credits may be from 6 to 10 depending on the research problem involved. Students who are working toward the Ph.D. degree must demonstrate a reading knowledge of two foreign languages, preferably French and German, early in their programs, and must complete a thesis-dissertation on some original research in Botany. The subject-matter fields for graduate study in Botany are: Systematic Botany and Plant Ecology, Mr. Hodgdon; Plant Physiology, Mr. Dunn; Plant Morphology and Anatomy, Miss Nast; Plant Pathology, Mr. Rich; Mycology, Mr. Richards; Cytology, Mr. Schreiber.

742. Plant Ecology

Plant life and its environment, including such factors as light, temperature, soil, water, and biotic relations; associations, successions, and plant
forms; plant distribution and underlying causes. Mr. Hodgdon. Prereq.: Bot. 1 or Bot. 3. 3 cr.

751. Plant Pathology

The nature of disease in plants, the etiology, symptomatology, and classification of plant diseases. Mr. Rich. Prereq.: Bot. 1 or Bio. 1. 1 lec.; 2 lab.; 3 cr.

752. Principles of Plant-Disease Control

Exclusion, eradication, protection, and immunization, and the specific, practical methods used to control plant diseases. Mr. Rich. Prereq.: Bot. 51. 1 lec.; 2 lab.; 3 cr. (Alternate years; offered in 1965-1966.)

753. Plant Anatomy

The anatomy of vascular plants with emphasis on tissue development and structure. Miss Nast. Prereq.: Bot. 1 or Bot. 3. 1 lec.; 2 lab.; 3 cr.

754. Cytology

The structure, physiological behavior, and development of cells. The cellular basis of heredity. Mr. Schreiber. Prereq.: One year each in the biological sciences and in chemistry. 3 cr.

755. Advanced Systematic Botany

The principles and laws of plant classification and nomenclature; plant families, field, and herbarium work. Mr. Hodgdon. Prereq.: Bot. 6. Hours to be arranged. 3 cr.

756. Plant Physiology

Structure and properties of cells, tissues, and organs; absorption and movement of water; metabolism; growth and irritability. Mr. Dunn. Prereq.: Bot. 1 or Bot. 3, and one year of chemistry. 2 lec.; 2 lab.; 4 cr.

762. Morphology of the Vascular Plants

Life histories and evolution of both extinct and living pteridophytes, gymnosperms, and angiosperms, including comparisons of the general structure and sexual organs. Miss Nast. Prereq.: Bot. 1 or Bot. 3. 2 lec.; 2 lab.; 4 cr. (Alternate years; not offered in 1965-1966.)

764. Microtechnique

Methods of embedding, sectioning, and staining plant tissues, and introduction to microscopy. Miss Nast. Prereq.: Bot. 1 or Bot. 3. 3 cr.

766. Morphology of Algae

Form, life histories, and classification of the main divisions; identification and recognition of common species. Miss Nast. Prereq.: Bot. 1 or Bot. 3. 2 lec.; 2 lab.; 4 cr. (Alternate years; not offered in 1964-1965.)

768. Mycology

The parasitic and saprophytic fungi, their growth, reproduction, and identification. Mr. Richards. Laboratory and assigned reading. 1 lec.; 2 lab.; 3 cr.

795-796. Investigations in (a) Systematic Botany, (b) Plant Physiology, (c) Plant Pathology, (d) Plant Anatomy and Morphology, (e) Plant Ecology, (f) Aquatic Plants, and (g) Cytology

Elective only upon consultation with the Department Chairman. Mr. Hodgdon, Mr. Dunn, Mr. Rich, Miss Nast and Mr. Schreiber. Hours to be arranged. 2 to 6 cr.
797-798. **Botany Seminar**

Library reference work and the preparation of papers and abstracts. Practice in the preparation of oral and written reports. Botany staff. *Prereq.*: 6 hours of botany, or permission of the Department Chairman. This course may be repeated for credit. 1 cr.

801. **Plant Geography**

The distribution of plants, a consideration of vegetation types and floras and problems of endemism with emphasis on North America; the major influential factors such as geologic, climatic, edaphic, and biotic, including man's activities. The major contributions from Humboldt to the present time. Mr. Hodgdon. 3 cr. (Alternate years; not offered in 1965-1966.)

851. **Advanced Plant Pathology**

Advanced theories and methods in plant pathology. Mr. Rich. *Prereq.*: Bot. 851 and permission of the instructor. Assigned reading, conferences and laboratory. 3 cr. (Alternate years; offered in 1965-1966.)

805. **Advanced Plant Physiology**

Plant physiological phenomena, such as absorption, permeability, mineral nutrition, photosynthesis and light effects, respiration, growth regulator effects. Mr. Dunn. *Prereq.*: Bot. 56 or equivalent, or adequate preparation in the physical sciences. Conferences, laboratory, and assigned reading. 3 or 4 cr. (Alternate years; offered in 1965-1966.)

895-896. **Investigations in (a) Systematic Botany, (b) Plant Physiology, (c) Plant Pathology, (d) Plant Anatomy and Morphology, (e) Plant Ecology, (f) Mycology, and (g) Cytology**

Elective only upon consultation with the Department Chairman. Mr. Hodgdon, Mr. Dunn, Mr. Rich, Miss Nast, Mr. Richards, and Mr. Schreiber. Hours to be arranged. 2 to 6 cr.

899 (899). **M.S. Thesis** 6-10 cr.

999 (999). **Doctoral Dissertation**

---

**Business Administration (71)**

Robert F. Barlow, *Dean*

**Whittemore School of Business and Economics**

The Whittemore School program leading to the degree of Master of Business Administration is designed to prepare its graduates for professional careers in administration in industrial and other organizations in a rapidly changing world. It provides for knowledge and understanding of management principles and practices through study of (1) the increasing body of relevant knowledge drawn from such fields as behavioral science, mathematics, and economics, (2) the existing and emerging processes and institutions of the functional fields of business, and (3) the role of business and other organizations in an increasingly complex and ever-changing society.
Candidates for admission must normally possess a Bachelor's degree from an accredited college or university. Applicants will generally be expected to have completed their undergraduate programs of study with a cumulative academic average of at least 2.5 or the equivalent. In addition, all candidates are expected to take the Admissions Test for Graduate Study in Business Administration given by the Educational Testing Service.*

The Whittemore School welcomes applicants with any academic background, but previous work in mathematics, economics, the behavioral sciences, and the various branches of engineering are of particular relevance to graduate study in Business Administration. Because of the increasing use of mathematical concepts, models, and notation in the practice and study of business administration, applicants should normally have successfully completed one year of college mathematics through an introduction to the calculus.

In all cases, the applicants' entire education background, relevant experience, references, and professional aims will be considered in the admissions process and exceptions may be made to any of the foregoing requirements by the Committee on Admissions.

The program leading to the Master of Business Administration degree requires two years of full-time study. The first year of the program consists of separate courses integrated into an overall study of the nature of business administration in a rapidly changing environment. In the first semester, the student will be largely concerned with study of concepts and analytical techniques drawn from the basic disciplines, such as economics, mathematics, psychology, and sociology, which underlie business administration. Integration is simultaneously sought through the requirement that the student complete a program of written analyses of comprehensive business problems. In the second semester, some work in the behavioral and quantitative areas is continued and courses dealing with the functional areas of business are introduced. In these courses the concepts and techniques developed in the early part of the year are utilized in dealing with specific business problems.

The second year continues the emphasis of the first year on overall management by requiring all students to complete the integrating course entitled Policy Formulation and Administration. Special attention is also given in the second year to the

* Details concerning times, places, etc., for these examinations may be obtained from Educational Testing Service, Box 966, Princeton, New Jersey 08540.
changing and increasingly complex external environment in which management functions by requiring all students to complete the course entitled Conceptual Foundations of Business.

In addition, the student will select the equivalent of six semester courses from among those offered in Business Administration and Economics by the Whittemore School and by other colleges and departments of the University. In selecting these courses the student will normally be expected to develop some concentration by taking at least two semester courses but not more than three semester courses in one of the several designated areas.

For descriptions of specific courses, areas of concentration, and other details, see the separate announcement of the Master of Business Administration program which may be obtained from the Dean of the Whittemore School.

Chemical Engineering (80)
Oswald T. Zimmerman, Chairman

To be admitted to graduate study in Chemical Engineering an applicant shall be expected to have completed a course of study substantially equivalent to that required for the degree of Bachelor of Science in Chemical Engineering in this University. However, students with good undergraduate records but with deficiencies in certain areas may be admitted on condition that they complete specified courses without credit to make up for their deficiencies.

A candidate for the Master's degree in Chemical Engineering must complete a thesis, for which up to 6 credits will be allowed, and he must pass an oral examination covering his thesis and graduate courses.

Courses numbered between 600 and 699 may be taken for graduate credit by non-majors only.

Permission of the instructor and consent of the student's adviser is required for enrollment in all Chemical Engineering courses.

641. Physical Metallurgy

The nature of metals, emphasizing the quantum mechanical description of the solid-state and including atomic structure, bonding, historical development of metal theories, elementary zone or band theory, and X-ray diffraction. The microscopic metal system, thermodynamics of metallurgical processes, defects and dislocations, phase relations of pure metals and alloys, microstructure, and physical and thermal treatment of metals. Study of some non-metals. Mr. Zimmerman. 3 lec.; 1 lab.; 4 cr.
662. CHEMICAL ENGINEERING ECONOMICS AND PLANT DESIGN

The principles of cost engineering, including estimation of plant investment, working capital, operating costs, labor requirements, payout time, and profitability. Value of money, capitalized costs, simple and compound interest, depreciation, taxes and insurance, labor requirements, overhead, financing of chemical enterprises, design of equipment and plants for minimum cost, plant location, transportation, sales cost, equipment cost, and cost indexes. Each class selects one or more problems involving the complete design of a chemical plant. For each problem, the most desirable process must be determined, the site selected, the equipment and plant designed, calculations made for all costs, profitability and payout time, and a complete report prepared, including the drawings of equipment and plant layout. Mr. Zimmerman. 1 lec. or rec.; 3 lab.; 4 cr.

751. PROCESS DYNAMICS

A basic treatment of process dynamics, including a study of first and second order linear processes and their response to step and sinusoidal driving functions. Graphical analysis of the entire control system is included with special emphasis on the optimum design of a stable system. Mr. Gehrhardt. 3 cr.

781. HIGH POLYMERS

Principles and practice of high polymer manufacture, including industrial polymerization methods and equipment design. Laboratory work includes typical polymerization reactions and the physical and chemical testing of various types of plastics and synthetic fibers. Mr. Lavine. 3 cr.

813. INTRODUCTION TO FLUID DYNAMICS

Equations of change for continuous fluids; laminar Newtonian and non-Newtonian flow; ideal fluid flow; boundary layer methods; turbulence. Prereq.: Math. 629. Mr. Chittenden. 3 cr.

815. HEAT TRANSFER

816. DIFFUSIVE MASS TRANSFER

Emphasis on the physical aspects of diffusion; theories of diffusion in dilute gases, dense gases, liquids and solids; surface diffusion; mixing processes. Simultaneous heat and mass transfer. Prereq.: Math 629, Mr. Chittenden. 3 cr.

823. ADVANCED CHEMICAL ENGINEERING THERMODYNAMICS

A discussion of the multicomponent open system from the engineering viewpoint; the volumetric and phase behavior of pure substances and of multicomponent systems at physical and chemical equilibrium; fugacity and activity; thermal properties of equilibrium chemically reacting systems; introduction to statistical thermodynamics. Mr. Fan. 3 cr.

832. ADVANCED CHEMICAL ENGINEERING KINETICS

Discussion of specialized applied kinetics problems; catalysis; fast reaction and shock tubes; combustion and detonation processes; non-isothermal kinetics; heat and mass transfer in non-equilibrium chemically reacting systems. Mr. Fan. 3 cr.
Advanced Process Dynamics

An advanced treatment of process dynamics including higher order processes and nonlinear processes. Special attention is given to representing complex process by differential equations, linearizing nonlinear elements, and adequately controlling the entire system. Mr. Gehrhardt. 3 cr.

Introduction to Nuclear Engineering

The scientific and engineering development of nuclear reactors, including basic binding energy physics, nuclear stability, radioactivity, the elements of nuclear reactor theory, and the engineering problems of heat transfer, fluid flow, materials selection, and shielding. This course is intended for any interested graduate students. Prereq.: Math 629. Mr. Fan. 3 cr.

Nuclear Chemical Technology

The design, construction, and operation of nuclear process equipment, including reactors and associated chemical processing facilities, and isotope separations plants. The technology of applied radiation chemistry. Intended primarily for graduate students in Chemical Engineering. Mr. Zimmerman. 3 cr.

Graduate Seminar

Discussion on topics of interest to graduate students and staff; report of research progress; invited lectures by outside speakers. 0 cr.

Thesis — Problems in Chemical Engineering

Investigations in some phase of chemical engineering. Ch.E. staff. 1-6 cr.

Chemistry (81)
Alexander R. Amell, Chairman

The Department of Chemistry offers programs leading to three graduate degrees: Doctor of Philosophy, Master of Science, and Master of Science for Teachers. Entering graduate students (except for those desiring the M.S.T. degree) are expected to take proficiency examinations in chemistry to assist in starting the new student’s graduate work at the proper level. These examinations will be offered at the beginning of the semester in September and in February.

Doctor of Philosophy Degree

Admission to the Ph.D. program is based upon a cumulative undergraduate average of 2.5 and requires satisfactory work in the usual undergraduate courses in general chemistry, analytical chemistry, organic chemistry, and physical chemistry, as well as the normal supporting courses in mathematics and physics. This degree requires the completion of a research problem presented in the form of a thesis.
The Ph.D. candidate will be expected to demonstrate proficiency in reading chemical literature in German and French or Russian. He will also demonstrate to his Doctoral Committee that he has a broad basic knowledge of the field of chemistry: (1) by completing certain fundamental graduate courses, and (2) by means of a series of examinations in his major field. The principal emphasis of the last two years will be on the research project which will constitute the dissertation. During this time the doctoral candidate will present and defend two original research proposals before his Doctoral Committee.

**Master of Science Degree**

Admission to the M.S. program is based upon a cumulative undergraduate average of 2.5 and requires satisfactory work in the usual undergraduate courses in general chemistry, analytical chemistry, organic chemistry, and physical chemistry, as well as the normal supporting courses in mathematics and physics. This degree requires the completion of a research problem presented in the form of a thesis.

**Master of Science for Teachers Degree**

The degree of Master of Science for Teachers is offered for candidates who hold a secondary school teacher certification in chemistry. Courses leading to this degree will normally be chosen from Summer Session and Summer Institute offerings and require 30 semester hours in courses approved by the Department Chairman. Persons interested in this degree should confer with him.

**Inorganic Chemistry**

775. **Inorganic Chemistry**

The relationship between chemical reactions and modern concepts of inorganic chemistry on a moderate level. The applicability and limitations of the newer ideas. Mr. Haendler, Mr. Weber. *Prereq.*: Chem. 683-684 or permission of the instructor. 3 cr.

804. **Advanced Inorganic Chemistry**

A survey from the modern point of view, with emphasis on theoretical and structural concepts. Mr. Haendler, Mr. Weber. *Prereq.*: Chem. 775 or its equivalent. 3 cr.

847. **Advanced Inorganic Chemistry**

The chemistry of coordination compounds, their structure, stereochemistry, and reactions. The metal-ligand bond. Mr. Haendler, Mr. Weber. *Prereq.*: Chem. 804. 3 cr.

848. **Advanced Inorganic Chemistry**

The theory and practice of x-ray diffraction and the determination of crystal structure. Mr. Haendler. *Prereq.*: Chem. 804 or permission of instructor. 3 cr.
Analytical Chemistry

661-662. Analytical Chemistry
The theory and techniques of gravimetric and volumetric analysis followed by special methods of analysis, such as those of ion exchange, chromatography, EDTA titrations and instrumental methods, including emission spectrography, flame spectrometry, spectrophotometry, gas chromatography, coulometry, potentiometry, conductimetry, and polarography. Mr. Daggett. Prereq. for Chem. 662: Chem. 683-684 or permission of instructor. 3 lec.; 2 lab.; 5 cr.

663. Introductory Radiochemical Techniques
Radiochemical techniques and laboratory practice in the use of apparatus in many fields of science which utilizes radiochemical operations. Prereq.: general inorganic chemistry and general physics. Mr. Amell, Mr. Owens. 3 lec.; 2 lab.; 5 cr.
May be taken for graduate credit by non-majors only.

830. Advanced Instrumental Methods
Techniques of chemical analysis from the standpoint of both theory and application. Topics include NMR, ESR, X-ray fluorescence, mass spectrometry, and neutron activation analysis. Mr. Ellis. Prereq.: Chem. 661. 3 cr.

831. Chemical Instrumentation
The basic modules of chemical instrumentation, both electrical and optical. Mr. Ellis. 3 cr.

832. Advanced Chemical Analysis
This course is concerned with advanced methods of analysis as applied to simple and complex systems, inorganic, organic, and biological. Mr. Daggett. 3 cr.

833. Chemical Separations
The use of various separation techniques prior to analysis and separations as a method of analysis are discussed. The application of statistics to chemical problems of analysis is covered. 3 cr.

Organic Chemistry

755, 756. Structural and Theoretical Problems of Modern Organic Chemistry
The methods of preparation and reactions of the principal classes of organic compounds. The electron theory of organic chemistry is used to correlate these reactions. The variation in reactivity of these various classes of organic compounds is utilized as a method of characterization of organic compounds. Emphasis is on the solution of assigned problems. Mr. Lyle. Prereq.: One year of organic chemistry. First semester, 3 lec.; 3 cr. Second semester, 1 lec.; 2 lab.; 3 cr.

801. Theoretical Organic Chemistry
A qualitative introduction to chemical bonding, including valence bond and molecular orbital theories. Use of these theories in discussing aromaticity, conformational analysis, and the relationship of reactivity to ring size. 3 cr.
802. Theoretical Organic Chemistry
Stereochemistry, including optical isomerism, racemic modifications, determination of configuration, optical rotatory dispersion and its applications. Mechanistic concepts; theoretical and experimental methods used in the study of reaction mechanisms. 3 cr.

807, 808. Introduction to Research Techniques
Lectures and laboratory to show experimental methods and interpretation of results. Topics include spectroscopy, electrochemistry, separation methods, and others. Staff. 1-6 cr.

811. Synthetic Organic Chemistry
Advanced discussion of heterolytic and homolytic substitution and elimination reactions of the major classes of organic compounds, with emphasis on the synthetic utility of these reactions. By permission of the instructor. 3 cr.

812. Synthetic Organic Chemistry
Addition, oxidation and reduction reactions and selected molecular rearrangements, with emphasis on the synthetic applications of these reactions. The synthesis and structure determination of complex organic compounds. By permission of the instructor. 3 cr.

817, 818. Special Topics in Organic Chemistry
Specialized courses for the advanced student. Topics may include reaction mechanisms, stereochemistry, spectroscopy, molecular biochemistry, steroids, alkaloids, organic sulfur compounds, and nitrogen heterocycles. Mr. Lyle, Mr. Jones, Mrs. Lyle, Mr. Anderson, and Mr. Uebel. 2 or 3 cr.

Physical Chemistry

683-684. Elementary Physical Chemistry
The properties of gases, liquids, and solids; thermochemistry and thermodynamics; solutions, chemical equilibria, reaction rates, conductance and electromotive force. Mr. Wheeler. Prereq.: calculus, physics. 3 lec.; 2 lab.; 5 cr. May be taken for graduate credit by non-majors only.

776. Advanced Physical Chemistry
A review of selected topics. Mr. Amell. Prereq.: One year of physical chemistry. 3 cr.

805, 806. Advanced Physical Chemistry
Wave mechanics and quantum chemistry, spectroscopy, molecular structure; second and third laws of thermodynamics, statistical thermodynamics, kinetics and mechanism. Mr. Pilar or Mr. Amell. Prereq.: One year of physical chemistry. 3 cr.

821. Physical Chemistry — Chemical Kinetics
The kinetics of homogeneous and heterogeneous reactions in gaseous and liquid systems, including an introduction to photochemistry. Mr. Amell or Mr. Owens. Prereq.: One year of physical chemistry. 3 cr.

822. Physical Chemistry — Chemical Thermodynamics
The foundations and inter-relationships of the theory of thermodynamics. The methods by which the theoretical principles may be applied to practical problems. Mr. Wheeler. Prereq.: Chem. 805. 3 cr.
826. Nuclear and Radiochemistry
Nuclear structure and reactions, particle accelerators, radioactive decay, detection of particles, and the interaction of particles with matter. Application of radiochemistry to chemical systems and research. Mr. Amell or Mr. Owens. 3 cr.

827, 828. Theoretical Chemistry I, II
The modern concepts and mathematical formalism of quantum mechanics with applications to electronic structures of atoms and molecules, spectroscopy, and the solid state. Mr. Pilar. 3 cr.

829. Theoretical Chemistry III
Statistical mechanics with applications to thermodynamics of non-ideal systems, intermolecular forces, and chemical kinetics. Permission of the instructor. Mr. Pilar. 3 cr.

895, 896. Colloquium in Chemistry
a. Inorganic Chemistry, Mr. Haendler, Mr. Weber
b. Organic Chemistry, Mr. Andersen
c. Organic Chemistry, Mr. Lyle
d. Theoretical Organic Chemistry, Mr. Uebel
e. Organic Chemistry, Mr. Iddles
f. Physical Chemistry, Mr. Amell, Mr. Owens
g. Physical Chemistry, Mr. Pilar
h. Physical Chemistry, Mr. Wheeler
i. Analytical and Physical Chemistry, Mr. Daggett
j. Organic Chemistry, Mr. Jones
k. Organic Chemistry, Mrs. Lyle
l. Analytical Chemistry, Mr. Ellis

3 cr. Sections of the course may be taken to a total of 12 cr.

897, 898. Seminar
Presentation and discussion of recent investigations in chemistry. 1 cr.

899. Thesis — Problems in Chemistry
Conferences, library, and experimental work in some field of chemistry Staff. Credits to be arranged.

999. Doctoral Research

Courses for the M.S.T. Degree
The following courses usually are offered only in the Summer Session.

781. The Teaching of High School Chemistry
Present day subject matter in general chemistry; choice of experiments for laboratory and lecture demonstrations; and presentation and evaluation of teaching methods which are effective in stimulating students. 4 cr.

782. Modern Inorganic Chemistry for the High School Teacher
The current concepts on such topics as fundamental particles, atomic structure, nuclear reactions, electronic configurations and orbitals, chemical bonds, the periodic table, oxidation-reduction, acids and bases, energy relationships, and ionic reactions. Prereq.: Freshman Chemistry. 4 cr.
783. **Analytical Chemistry for High School Teachers**

The principles of ionic equilibria in qualitative and quantitative analysis. Experimental work in qualitative analysis using the semimicro technique. The experimental work in quantitative analysis acquaints the student with the principles, techniques, and calculations of gravimetric and volumetric determinations. Some experimental work involves the use of the spectrophotometer in quantitative analysis and the glass electrode method of measurement of pH. 8 cr.

784. **Modern Approach to Organic Chemistry for High School Teachers**

The structure and properties of organic compounds, including those of current interest and importance, such as natural and synthetic polymers, antibiotics, and medicinals. An understanding of the behavior of organic compounds will be based on current theories of reactions. **Prereq.**: General chemistry. 8 cr.

785. **Physical Chemistry for High School Teachers**

The laws of chemistry and their application to physical and chemical changes. **Prereq.**: College physics, algebra and trigonometry. 8 cr.

786. **Radiochemistry for High School Teachers**

The theory of radioactive decay, the effects of radioactive decay upon matter, and the methods and techniques of the detection of radioactive decay. The uses of radiotracers in research. **Prereq.**: General chemistry and general physics. 4 cr.

787. **Laboratory Techniques in Chemistry**

Modern methods for the separation, identification, and estimation of substances. Experiments will be designed to assist the teacher by providing new subjects for laboratory demonstrations and student projects. **Prereq.**: Analytical and organic chemistry. 4 cr.

788. **Advanced Organic Chemistry for High School Teachers**

Types of homolytic and heterolytic reactions of organic compounds and their relationship to organic structures, including configuration and conformation. **Prereq.**: Chem. 794 or its equivalent. 4 cr.

789. **Atomic and Molecular Structure**

The methods of determining atomic and molecular structure, including ultraviolet and infrared spectroscopy and radiochemistry. 4 cr.

---

**Civil Engineering (82)**

J. Harold Zoller, **Chairman**

A candidate for the degree of Master of Science in Civil Engineering must have completed a course of study equivalent to that required by this department for the baccalaureate degree or he must take specified courses in the areas of deficiency without credit. An oral final examination is required of all candidates.

A candidate for the Master's degree will normally complete a thesis for not less than 6 nor more than 9 hours of credit. With
the permission of the department, a student may be permitted to substitute approved course work for the thesis requirement. In this event he must also submit to his examining committee a paper written in one of his courses, which shall be the equivalent of a thesis in style and quality, but not in scope. One copy of the thesis or paper is required by the department.

Courses numbered between 600 and 699 may be taken for graduate credit by non-majors only.

Courses numbered above 700 may be offered biennially or upon demand.

Permission of the instructor and consent of the student’s adviser is required for enrollment in all Civil Engineering courses.

620. Transportation Engineering
The development, organization, administration, and inter-relation of transportation systems and facilities, including railroads, highways, airports, waterways, and pipe lines. Major emphasis will be given to the economics of location, geometric and structural design, construction materials, methods, and costs, as applied to modern transportation engineering. Mr. Skelton. Prereq.: C.E. 506. 3 cr.

643. Water Supply and Treatment
The sources, quantity, quality, and sanitary aspects of public water supplies. Methods of purification and distribution systems. Mr. Langley. 3 lec.; 1 lab.; 4 cr.

644. Sewerage and Sewage Treatment
The theory and problems of sewerage, the principles governing the disposal of sewage, and the various methods of sewage treatment. Mr. Langley. Prereq.: C.E. 643. 3 lec.; 1 lab.; 4 cr.

665. Soil Mechanics
Soil classification, physical properties including permeability, compressibility, bearing capacity, settlement, and shear resistance are related to the principles underlying the behavior of soils subjected to various loading conditions. Underground exploration and typical foundation problems are included. Mr. Skelton. 3 lec.; 1 lab.; 4 cr.

711. Community Planning
Social, economic, and physical factors; content and extent of desirable programs, including purpose and scope, the preliminary survey, elements of community land planning, the master plan, transportation systems, street patterns and traffic, motor vehicle parking, airport sites, public building sites, parks and recreational facilities, zoning, control of land sub-division, neighborhood centers, housing, legal, financial and economic problems, and redevelopment of blighted areas. Mr. Dawson. 3 cr.

714. Contracts, Specifications, and Professional Relations
The essential elements required in engineering contracts; the purposes and content of specifications; professional conduct, relations, and ethics; and estimating by means of quantity surveys and unit cost methods. Mr. Dawson. 3 cr.
721. **Highway Engineering I**
Highway organization, administration, finance, planning, programming, traffic surveys, traffic methods; highway laws, contracts, specifications; highway capacity, geometric design, access control, safety, accident studies; pavement selection, performance, and maintenance. Mr. Skelton. *Prereq.*: C.E. 620. 3 cr.

722. **Highway Engineering II**
Design of flexible and rigid pavements and bases for highways, airports, and city streets; pavement selection, construction methods, materials, specifications, and engineering cost estimates. Mr. Skelton. *Prereq.*: C.E. 620. 3 cr.; 3 lec.

741. **Hydraulic Engineering**
Application of fluid mechanics to hydraulics problems, such as reservoirs, dams, control works, open-channel flow, hydro-electric power, irrigation, drainage, and multi-purpose projects. Mr. Langley and Mr. Zoller. *Prereq.*: C.E. 642. 2 lec.; 1 lab.; 3 cr.

742. **Hydrology**
The occurrence and physical effects of water on the earth, including meteorology, groundwater runoff, and streamflow routing. Mr. Langley and Mr. Zoller. *Prereq.*: C.E. 642 concurrently or as a prerequisite. 2 lec.; 1 lab.; 3 cr.

782. **Timber Design**
Properties and characteristics of structural woods, connection methods, design of timber members and connections in beams, columns, and trusses, and glued laminates of wood. Mr. Wang. *Prereq.*: C.E. 692. 1 lec.; 1 design period; 2 cr.

784. **Structural Components**
Selected problems in the analysis and design of structural components, such as beams on elastic foundations, curved beams, beam columns, buckling, torsion, Introduction to the theory of elasticity. Mr. Wang. *Prereq.*: C.E. 692. 3 lec.; 3 cr.

790. **Structural Engineering**
The planning and design of determinate and indeterminate structures. Introduction to modern design theories; prestressed concrete, plastic theory of steel and reinforced concrete. Mr. Wang. *Prereq.*: C.E. 685 and C.E. 693. 2 lec.; 1 design period; 3 cr.

841-842. **Advanced Hydraulics**
Sediment transportation, secondary flows, design of hydraulic structures, reservoir and channel routing techniques, basic hydrodynamics and independent study. Mr. Zoller and Mr. Langley. 3 cr.

843-844. **Experimental Hydraulics**
Experimental techniques and laboratory practice. Experimental studies of the fundamental phenomena of liquid flow. Mr. Dawson. *Prereq.*: C.E. 642. 3 cr.

855-856. **Advanced Hydraulic and Sanitary Engineering**
Hydrology, hydraulics of river flow, flood flows, design of reservoirs, flood control, river control, and hydraulic and sanitary structures. Water
treatment and sewage treatment practices. Mr. Zoller and Mr. Langley. Prereq.: C.E. 643 and 644. 3 cr.

863-864. Soil Mechanics
The physical and mechanical properties of soil in relation to engineering structures. The theory of consolidation, shearing resistance, bearing capacity, settlement, earth pressure, and seepage studies. Mr. Skelton. Prereq.: C.E. 665. 3 cr.

865. Soil Testing for Engineering Purposes
The essential tests for the physical properties: permeability, capillarity, compressibility, rate and magnitude of consolidation, and shearing resistance. Mr. Skelton. 2 to 4 cr.

866. Foundation Engineering
Application of the principles of soil mechanics to selection of type of substructure, foundation construction methods, exploratory soil studies, stability analysis, earth dam and tunnel construction, and underpinning operations. Mr. Skelton. Prereq.: C.E. 665. 3 cr.

881-882. Advanced Structural Analysis
Comprehensive consideration of the methods of structural analysis and their application to the design of two and three-dimensional structures. Mr. Wang. Prereq.: C.E. 790. 3 cr.

883. Advanced Structural Design

895, 896. Civil Engineering Problems
The study and investigations of problems selected to meet the needs of the student. 2 or 3 cr.

899. Master's Thesis
Hours and credits, from 6 to 9, to be arranged.

Economics (72)
Robert F. Barlow, Dean
Whittemore School of Business and Economics

Admission to graduate study in Economics leading to the degree of Master of Arts is limited to students with a better than average undergraduate record. Candidates for admission are required to take the Graduate Record Examination (both the Aptitude Test and Advanced Test in Economics). The prerequisite for graduate work consists of a minimum of 24 hours of undergraduate study in Economics and related fields of which at least 12 hours shall have been in Economics. In addition, all candidates must either present six hours of undergraduate credit in statistics or mathematics, or take six hours of undergraduate work in statistics or mathematics at the University of New
Hampshire without credit, or pass a proficiency test in either field.

The candidate for a Master's degree must fulfill the general requirements of the Graduate School and the following major requirements:

1. Thirty semester hours of graduate study or 24 semester hours and a thesis:
   (a) a minimum of 21 semester hours in courses numbered 700 and above, of which 6 hours may be satisfied by an acceptable thesis; at least 9 of these hours, exclusive of the thesis, must be in courses numbered 800 and above;
   (b) a maximum of 9 semester hours in approved courses numbered 600 and above in related disciplines.

2. Evidence of proficiency in economic analysis, inclusive of both price and income analysis.

3. Evidence of proficiency in any two of the following four fields: economic history, history of economic thought, mathematical economics, and statistics, as well as two additional fields chosen from among the following: international economics, monetary and fiscal policy, industrial organization, labor economics and industrial relations, agricultural economics, and economic development and comparative economic systems. The thesis area will be considered as one field.

4. Students electing the non-thesis option will be required to take both oral and written comprehensive examinations. Students electing the thesis option will be required to take an oral examination.

If a thesis is to be submitted, it must be in form for presentation to the Reading Committee by May 1 of the year in which the degree is to be granted.

704. Economic History
   An analysis of the development of the American and European economies. Miss Woodruff. 3 cr.

754. Advanced Money and Banking
   Emphasis on central banking, monetary policy and monetary theory. Study of current problems and developments in banking. Mr. Degler. 3 cr.

758. Government Regulation of Business
   Analysis of government policy with reference to such problems as conspiracy, monopoly, mergers, unfair practices, and discrimination. This an-
alysis includes a legal and economic appraisal of government policy alternatives. Mr. Irwin. 3 cr.

761. Economic Systems
Analysis of the functioning of various types of national economic systems. Emphasis on economic planning and development. Mr. Barlow. 3 cr.

763. International Economics
A survey of contemporary issues in international economic theory and policy. Analysis of trade theory, balance of payments problems, international liquidity, and the adjustment processes. Mr. Rothwell. 3 cr.

773. Advanced National Income Analysis
Emphasis on national income theory, its development, and policy implications. Mr. Rosen. 3 cr.

774. Mathematical Economics
Application of mathematical techniques to selected problems in economic analysis. Mr. Bergeron. 3 cr.

776. Economic Fluctuations
The recurrent movements of prosperity and depression, with emphasis upon causes and public policy implications. Mr. Rosen. 3 cr.

778. Advanced Economic Analysis
Topics in micro-economics with emphasis on recent developments in such areas as general equilibrium analysis, welfare economics, demand theory, and capital theory. Mr. Bergeron. 3 cr.

797. Seminar in Economic Development
A survey of theories and detailed case studies in problems of economic development. Mr. Rothwell. 3 cr.

851. Human Relations in Industry
Labor-management relations studied as one aspect of human relations; applications of recent research in the behavioral sciences; case studies. Mr. Hogan. 3 cr.

852. Collective Bargaining
The problems involved in arriving at and administering labor-management agreements. Analysis of problems and issues, such as the recognition clause, union security, management security, seniority, grievances and arbitration, wages, work assignments, technological change, automation, and others. Mr. Hogan. 3 cr.

857-858. History of Economic Thought
The evolution of economic thought, including the work of contemporary economists. Examination and critical appraisal of the work of major economists and major schools of economists, particularly with reference to the applicability of their theories to current economic problems. Mr. Irwin. 3 cr.

895-896. Independent Study
Selected projects. Staff. 6 cr.
898. Seminar in Monetary and Fiscal Policy
An analysis of policy alternatives, with emphasis on the evaluation of contemporary policy measures. 3 cr.

899. Thesis
Staff. 6 cr.

Education (48)
Roland B. Kimball, Chairman

Admission to graduate standing in the Department of Education is granted to applicants meeting the entrance requirements of the Graduate School and accepted by the Department.

The Master of Education programs offered by the Department provide opportunities for different types of educational specialization. These are described briefly in the following paragraphs.

Curriculum I
Curriculum I is designed for students who are fully certified as elementary or secondary school teachers. The program includes a core of four basic courses (noted below). The balance of the program is elective. In consultation with the graduate adviser, the candidate uses these electives to build an area of concentration in an appropriate academic discipline or in an educational specialty such as reading or school administration.

Under certain conditions, a modified Curriculum I may be appropriate for college graduates without prior professional preparation seeking to become qualified as elementary and secondary school teachers. For such students, the required program for teacher preparation will replace a part of the block of elective courses described in the preceding paragraph. Students in this program must complete the equivalent of the University undergraduate requirements in general studies, the requirements for an academic major, the professional education requirements for teaching, and the core requirements of Curriculum I.

A minimum of 30 credits is required in Curriculum I. The four basic courses are as follows:

Education 883 Advanced Psychology of Human Learning
Education 885 Educational Tests and Measurements
Education 886 Philosophy of Education
Psychology 605 Mental Hygiene in Teaching or
Psychology 841 Personality Theory

Curriculum II Counseling and Guidance

Curriculum II is a fifth-year program for the preparation of guidance counselors. Candidates must be fully certified as an
elementary or secondary school teacher or give evidence of adequate undergraduate preparation in psychology and education. The program of studies in this curriculum includes the following courses:

- Psychology 654 Psychopathology
- Psychology 663 The Exceptional Child
- Psychology 808 Case Studies in Counseling
- Psychology 823 Individual Testing
- Education 871 Principles of Guidance
- Education 872 Techniques of School Counseling
- Education 873 Occupational Information
- Education 874 Administration of Guidance
- Education 875 Practicum in Counseling
- Education 885 Educational Tests and Measurements

When the student's objective warrants, Psychology 808, Psychology 823, and Education 873 may be waived in individual cases.

Other recommended courses in this curriculum, which are suggested as electives, follow:

- Psychology 841 Personality Theory
- Education 853 Seminar in Curriculum Study
- Education 865 Educational Supervision
- Education 883 Advanced Psychology of Human Learning
- Education 886 Philosophy of Education

The usual program of studies will prepare an individual for a career as a school guidance counselor. It also will serve as the first year of graduate study for a person desiring to become a school psychologist.

A minimum of 30 credits is required in Curriculum II.

CURRICULUM III Teaching the Deaf

Curriculum III is a program to prepare teachers of the deaf which is operated in affiliation with the Crotched Mountain School for the Deaf, Greenfield, New Hampshire. Candidates for this program should meet the certification requirements for either elementary or secondary school teaching. Exceptions may be made for persons with substantial preparation in psychology, social work, or other relevant fields of study, but selected prerequisite courses must be completed prior to study at the Crotched Mountain School for the Deaf.

This program requires a minimum of twelve months and 36 credits. It includes an academic year of study at the Crotched Mountain School for the Deaf, with part-time study at the Uni-
versity of New Hampshire, followed by full-time study at the University of New Hampshire Summer Session.

Education 830 Psychology and Education of Exceptional Children
Education 825 Audiology
Education 815 History, Education, and Guidance of the Deaf
Education 818 Anatomy and Physiology of the Auditory and Vocal Mechanisms
Education 819 Methods of Teaching Speechreading to the Deaf and Hard of Hearing
Education 816 The Teaching of Language to the Deaf, I
Education 817 The Teaching of Language to the Deaf, II
Education 827 Methods of Teaching Elementary School Subjects to the Deaf
Education 820 The Teaching of Speech to the Deaf
Education 826 Observation, Student Teaching, and other Laboratory Activities
Education 828 Advanced Audiology
Education 829 Selection and Use of Hearing Aids
Psychology 605 Mental Hygiene in Teaching
Education 883 Advanced Psychology of Human Learning
Education 886 Philosophy of Education

CURRICULUM IV School Library Science

Curriculum IV is for the preparation of school librarians. Candidates must have a year of educational psychology. It is preferable that candidates be fully certified teachers and certain prerequisite courses may be required of candidates lacking a teacher education preparation.

A minimum of 36 credits is required, including the following required courses:

Education 734 Children's Literature
Education 842 Library Organization and Service
Education 843 Basic Reference and Informational Services for the School Library
Education 844-845 Technical Process in the School Library
Education 846 Selection and Acquisition of Books and Other Materials
Education 847 Reading Guidance
Education 848 Directed Research in School Librarianship
Education 850 Administration of Instructional Materials Programs

The balance of the curriculum is elective, subject to approval by the adviser.

COMPREHENSIVE ORAL EXAMINATION

Near the end of 30 semester hours of work the candidate for the Master's degree in Education in Curricula I or II begins writing, with the help of the Chairman of the Master of Educa-
tion Degree Committee, a group of statements which are his own stand on basic issues in education. The aim of the writing of these statements is to help the candidate pull together the ideas and points of view he has taken from course work and his previous experience into his own working philosophy of education. When he finishes his courses and the writing of the complete set of statements, he defends these statements in an oral examination.

The date of the oral examination shall not precede the date of completion of all courses in the candidate's program. Under normal circumstances, completion of the degree program will require 12 months of full-time graduate study and, in addition, completion of the oral examination. It is not realistic for candidates to plan to complete all requirements for the Master's degree in Education in one academic year. If the oral examination is to be taken during the academic year, completed theses must be submitted on or before April 20; if the examination is scheduled for the summer, July 20 is the last date for submitting the completed theses. No more than two opportunities are permitted for the submission of the complete sets of statements to the Master of Education Degree Committee, and no more than two opportunities are permitted for the oral examination. Students in Curriculum III and Curriculum IV are not required to write theses or take the oral examination.

755. AN EDUCATIONAL PSYCHOLOGY OF DEVELOPMENT

This course considers the philosophical and psychological principles underlying the process of education. Through a critical examination of human behavior, the student gains self-knowledge and an understanding of principles that affect all men. An analysis of popular novels, autobiographical reports, and technical studies constitute the basis for group thinking and discussion. 3 cr.

757. PSYCHOLOGY OF HUMAN LEARNING

Psychology of learning as it operates within the classroom. Prereq.: Ed. 481 or 755 and permission of the department. 3 cr.

758. PRINCIPLES OF TEACHING

Application of the theories of learning studied in Ed. 757, with emphasis upon the following: organization of content, specific planning, and a study of procedures essential to the evaluation of the learning processes. Prereq.: Ed. 757 and permission of department. Two 2-hour rec.-labs.; 3 cr.

759. PRINCIPLES OF EDUCATION

American schools have developed, and are still developing, in unique forms quite unlike their European counterparts. Among Americans, however, there are basic disagreements concerning the direction our schools should take. This course deals with these conflicts of philosophy, the problems of American education, and research pertinent to these problems. Prereq.: Ed. 757 and permission of Department. 3 cr.
763. INSTRUCTIONAL MEDIA
To help improve ability to communicate ideas through materials and equipment commonly available in a school audio-visual center. Educational films, bulletin board design, the role of language labs, educational television, programmed learning, and media research. A laboratory period of one hour each week is required in addition to the regular class period. **Prereq.:** Ed. 757 or permission of instructor. 3 cr.

785. UTILIZATION OF TESTING IN PUBLIC EDUCATION
Strategies for discovering and employing predictive validities of standardized tests in public school work. 3 cr.

815. HISTORY, EDUCATION, AND GUIDANCE OF THE DEAF
An evaluation of the place of the deaf in the community from social, economic, and political viewpoints from ancient times to present. Bibliographic source materials in the field on education and welfare. Studies related to the psychology, social adjustment and the learning problems of the deaf. **Given at Crotched Mountain. Prereq.:** Ed. 759. 2 cr.

816-817. THE TEACHING OF LANGUAGE TO THE DEAF. I, II
The principles and techniques of teaching language to the pre-school and school-age deaf child. The leading systems of teaching language to the deaf. Emphasis on natural language for the deaf and the Fitzgerald Key. **Given at Crotched Mountain. Prereq.:** Ed. 733 or permission of the instructor. 2 cr.

818. ANATOMY AND PHYSIOLOGY OF THE AUDITORY AND VOCAL MECHANISMS
The anatomy, physiology, and pathology of the speech and hearing mechanisms. **Given at Crotched Mountain. 2 cr.**

819. METHODS OF TEACHING SPEECHREADING TO THE DEAF AND HARD OF HEARING
The various principles and techniques of teaching speechreading, Nitchie, Jena, Kinzie, Muller-Walle, etc., and research pertaining to lipreading. **Given at Crotched Mountain. 2 cr.**

820. THE TEACHING OF SPEECH TO THE DEAF
The principles and techniques used in developing the formation of English sounds by the analytical method and also the introduction of speech by the whole-word method. Correction of speech defects in the hard of hearing. Development of speech in the pre-school and school-age deaf child. **Given at Crotched Mountain. 2 cr.**

825. AUDIOLOGY
Hearing tests and auditory training. The techniques and interpretation of pure tone hearing tests and an introduction to speech audiometry. Audio-gram interpretation. Air and bone conduction tests on children of varying ages who are in schools for classes for the deaf. Introduction to several types of amplification systems used in school and classes for the deaf. Techniques and principles of auditory training programs. **Given at Crotched Mountain. Prereq.:** Ed. 818. 3 cr.

826. OBSERVATION, STUDENT TEACHING, AND OTHER LABORATORY ACTIVITIES
Students travel widely to observe several schools having differing philosophies of education. **Given at Crotched Mountain. 3 cr.**
827. METHODS OF TEACHING ELEMENTARY SCHOOL SUBJECTS TO THE DEAF

An understanding of what language deprivation means in developing elementary curriculum for the deaf child. Principles and methods of teaching reading in the lower and higher grades. Methods of teaching subjects such as arithmetic, social studies, and sciences and health. Methodology in the intermediate and advanced grades. Consideration and use of visual aids. **Prereq.**: Methods in teaching elementary subjects, especially arithmetic, science, social studies, and reading or major in elementary or secondary education. Given at Crotched Mountain. 2 cr.

828. ADVANCED AUDIOLOGY

Advanced puretone speech audiometry. Special tests and exploratory techniques in audiometry, logical assessment, instrumentation and testing rooms. Industrial audiology and conduct of an audiological clinic. Given at Crotched Mountain. **Prereq.**: Ed. 825. 3 cr.

829. SELECTION AND USE OF HEARING AIDS

Research and theory of clinical selection of hearing aids. Given at Crotched Mountain. **Prereq.**: Ed. 818 and 825. 3 cr.

830. PSYCHOLOGY AND EDUCATION OF EXCEPTIONAL CHILDREN

A survey of all fields of special education. Psychological problems arising from handicapping conditions. Given at Crotched Mountain. 2 cr.

SPECIAL METHODS IN SECONDARY SCHOOL TEACHING

The curricula and methods in the various secondary school subjects. Emphasis will be on observation and planning. There will be a different course for each major subject area:

- 831. Art
- 832. Biology
- 833. English
- 834. General science
- 835. Foreign language
- 836. Mathematics
- 837. Physical science
- 838. Social studies
- 839. Music

**Prereq.**: Ed 757 and 758 or 858. May be taken concurrently. Preparation in subject-matter field equivalent to a college major. 3 cr. (Offered summers only as part of a “block program” for Liberal Arts graduates.)

842. LIBRARY ORGANIZATION AND SERVICE

Background and development of the school library, including philosophy, functions, objectives and standards. Problems of organization and administration. Relationship to curriculum, teacher, and students, and the public library. 3 cr.

843. BASIC REFERENCE AND INFORMATIONAL SERVICES FOR THE SCHOOL LIBRARY

The selection and evaluation of basic reference materials common to all libraries with special application to the school. Familiarity with informational and research tools and intensive practice in their use. 3 cr.

844-845. TECHNICAL PROCESSES IN THE SCHOOL LIBRARY

Organizing materials with special emphasis on classification and cataloguing systems. Practice in the technical arrangement of books, pamphlets, peri-
odicals, recordings, and pictures. Ordering, processing, mending, and binding procedures. 6 cr.

846. SELECTION AND ACQUISITION OF BOOKS AND OTHER MATERIALS
Techniques for building the library collection in all subject areas. A wide range of sources, aids, and tools are considered. Intensive reading and analysis of books for children and young people. Practice in the compilation of bibliographies for special levels and interests, and in relating selection to curriculum needs. Prereq.: Ed. 842 and Ed. 843. 3 cr.

847. READING GUIDANCE
The role of the school librarian in reading growth and development through the promotion of interest and skills in reading. Review of current research and studies on reading and reading habits, the mass media, reading disabilities, and other factors that retard or promote the use of printed materials. Prereq.: Ed. 842 and Ed. 843. 3 cr.

848. DIRECTED RESEARCH IN SCHOOL LIBRARIANSHIP
2-4 credits. Prereq.: Ed. 846 and Ed. 847 (may be taken concurrently).

850. ADMINISTRATION OF INSTRUCTIONAL MATERIALS PROGRAMS
To help public school audio-visual personnel examine the planning, organizing, and communicating activities that provide a foundation for the effective use of newer educational media. Selection, evaluation, in-service training, planning new facilities, a current research and systems design. A previous course in audio-visual education is desirable. Prereq.: Permission of the instructor. 3 cr.

851. PROGRAMMED INSTRUCTION
Examination of the advantages and limitations of programmed instruction and of its psychological foundation. The various types of teaching machines, the results of experimentation with programmed instruction, and the method of developing programmed instruction material. Prereq.: Ed. 757. 3 cr.

852. PRINCIPLES AND PROBLEMS OF SECONDARY-SCHOOL CURRICULUM REORGANIZATION
Significant changes in secondary-school offerings, with emphasis on curriculum revision and techniques of revision. Prereq.: Teaching experience. 3 cr.

853. SEMINAR IN CURRICULUM STUDY
The techniques and procedures of curriculum development for the purpose of better meeting the educational needs of adolescents. 3 cr.

858. ADVANCED PRINCIPLES OF TEACHING
An opportunity to study problems, principles, and teachings which are involved in planning for pupil learning. Prereq.: For graduate students with teaching experience. 3 cr.

861. PUBLIC SCHOOL ADMINISTRATION
For students who have had teaching or administrative experience, and are looking forward to further work as superintendent, principal, or departmental head. Emphasis on policy-making, management, personnel, public relations, finances, housing, curricula, reporting, and research. Prereq.: Teaching experience. 3 cr.
862. Educational Finance and Business Management

Aspects and principles of financing education, budgetary procedure, accounting, auditing, school indebtedness, financial reporting and business management. Experience in handling practical school finance problems will be part of the project work. Prereq.: Ed. 861. 3 cr.

863-864. Seminar in Educational Administration

The study of cases and concepts. Prereq.: Ed. 861. 3 cr.

865. Educational Supervision

Theoretical foundations of supervisory behavior as a means of effecting changes in instructional practices; consideration of instruments and techniques based on those theoretical foundations; some opportunity for field projects utilizing instruments and techniques. Prereq.: Teaching experience. 3 cr.

871. Principles of Guidance

A first course to help the student understand and utilize the philosophies and processes of guidance as they operate in his own behavior. Prereq.: Educational Psychology. 3 cr.

872. Techniques of School Counseling

Methods of counseling school pupils. Prereq.: Ed. 871. 3 cr.

873. Informational Materials in Guidance

A broad perspective of guidance materials, including follow-up studies, community surveys, and the Dictionary of Occupational Titles. Designed for teachers or prospective counselors working toward certification in guidance. Prereq.: Ed. 871 or permission of the instructor.

874. Organization and Administration of Guidance

An advanced course for teacher-counselors, counselors, and administrators who are interested in planning or reorganizing a guidance program. It will be conducted as a seminar, giving practice in group dynamics. Prereq.: Ed. 871, 873, 885 or permission of the instructor. 3 cr.

875. Practicum in Counseling

Vocational and educational counseling of adolescents under supervision. Prereq.: Ed. 873, 885 and permission of the instructor. 1-4 cr.

881-882. Research Problems in Education

Prereq.: Permission of instructor. 2 to 6 cr.

883. Advanced Psychology of Human Learning

Special topics in the field of educational psychology with emphasis on the learning process: (a) examination of learning situations in the classroom in the light of experimental research; (b) examination and evaluation of learning situations in the light of the major theories of learning. Prereq.: Ed. 757. 3 cr.

885. Educational Tests and Measurements

Testing theory and practice concerned with a two-fold analysis of standardized tests and batteries in terms of (a) their psychological, or factorial, meanings, and (b) their practical, or predictive uses. 3 cr.
886. Philosophy of Education

Current educational objectives and practices and the philosophical foundations upon which they are based. Prereq.: Ed. 757 and Ed. 759. 3 cr.

887. The History of Educational Ideas

All of the modern theories, practices, and present-day conflicts about education have their stems in the past. Some of the scholarship of the social sciences as well as the materials from the history of education will be related to contemporary educational viewpoints. A better understanding of the bases of American ideas about education should result from this approach. 3 cr. (Offered in Extension and Summer Session only.)

888. Education in Foreign Countries

Educational developments in selected foreign countries are examined in relation to the cultural background and present-day needs of the people. The sociological and psychological factors that influence the educational policy and the structure of each national school system. 3 cr. (Offered in Extension and Summer Session only.)

890 Practicum and Seminar in Teaching Gifted Secondary School Students

For teachers of honors courses, advanced placement programs, or other special classes for the gifted. Offered in cooperation with the Advanced Studies Program, St. Paul's School, Concord, N. H. Provides daily opportunities to observe and participate as interns in teaching special summer classes for gifted high school students. Intern selects one academic area for practicum. Practicum available in mathematics, biology, chemistry, physics, English, Russian, German, and Greek. Concurrent seminar, meeting three hours weekly, deals with general concerns of identification, instructional provisions, motivation, evaluation, and classroom guidance with respect to the academically gifted. (Offered summers only. Participants must be able to spend full days at St. Paul's School throughout the Advanced Studies Program.) Prereq.: Teaching experience and permission of the related departments. 3 cr.

895, 896. Seminar in Contemporary Educational Issues and Practices

Section 2: New Trends in Curriculum and Instruction

A detailed analysis of selected contemporary educational issues and practices. Consideration will be given to experimental projects that have explored the rationale, operational requirements, and effectiveness of these practices. The practical considerations involved in the introduction of these practices into a local school system. Various sections will consider different educational practices and issues, e.g., team teaching, flexible scheduling, and the ungraded school. The subtitle indicates the specific area of study. Students may repeat the course for different areas of study. (Educ. 895, Section 2 offered Summer, 1965. 3 cr. An examination of current curriculum developments, newer instructional techniques and their implications for local school practices.) Prereq.: Teaching experience. 3-6 cr.

Courses in Problems in Teaching High-School Subjects

The following courses are devoted to a study of problems of objectives, selection, and organization of subject matter, teaching and testing techniques and classroom management in the
teaching of the respective subjects. To be admitted into one of these courses the student must have completed, with a satisfactory grade, Educ. 758 or 858 and, in addition, the courses in the subject and related subjects designated as prerequisites to the respective courses in this group. A student who desires to be considered for supervised teaching must complete with a satisfactory grade one of these courses in the subject in which he hopes to do supervised teaching.

**Agriculture-Education (Ag-Ed) 650. Principles of Agricultural Education**

3 cr.

**Agriculture-Education (Ag-Ed) 651, 652. Methods of Teaching Agricultural Mechanics**

1 cr.

**Agriculture-Education (Ag-Ed) (792). Planning for Teaching**

4 cr.

**Art-Education (Art-Ed) 792. Problems of Teaching Art in Elementary Schools**

3 cr.

**Art-Education (Art-Ed) 791. Problems of Teaching Art in Secondary Schools**

3 cr.

**Biology-Education (Bi-Ed) 791. Problems in the Teaching of High-School Biology**

3 cr.

**English-Education (Eng-Ed) 791. Problems in the Teaching of High-School English**

3 cr.

**History-Education (Hist-Ed) 791. Problems in the Teaching of High-School History and Other Social Studies**

3 cr.

**Home Economics-Education (HE-Ed) 791. Problems in the Teaching of High-School Home Economics**

3 cr.

**Language-Education (Lanc-Ed) 791. Problems in the Teaching of Foreign Languages in the High School**

3 cr.

**Mathematics-Education (Math-Ed) 791. Problems in the Teaching of High-School Mathematics**

3 cr.

**Music-Education (Mus-Ed) 791. Problems in the Teaching of Secondary School Music**

3 cr.
Music Education (Mus-Ed) 792. Problems in the Teaching of Elementary School Music 3 cr.

Physical Education (PE-Ed) 792. Problems of Teaching Physical Education in the Elementary School 3 cr.

Courses in Supervised Teaching

Supervised teaching is not open to a graduate of another institution unless he first completes an approved program of teacher preparation in the University.

Applications for assignment to supervised teaching are to be filed with the Department of Education, using forms available from the Department. Applications for placement as a student teacher during the first semester must be submitted during the week of March 24, 1965, for the second semester during the week of October 24, 1965.

Students may be enrolled for from 6 to 14 credits of work in supervised teaching. Students may count no more than 9 semester credits in supervised teaching toward the Master of Education degree.

Education-Agriculture (Ed-Ag) 794. Supervised Teaching in Agriculture
Prereq.: Senior standing in Ag-Ed Curriculum.

Education-Art (Ed-Art) 794. Supervised Teaching in Secondary School Art
Prereq.: Art-Ed. 791.

Education-Biology (Ed-Bi) 794. Supervised Teaching in High-School Biology
Prereq.: Bi-Ed 791.

Education-Commerce (Ed-Co) 794. Supervised Teaching in High-School Commercial Subjects

Education-English (Ed-Eng) 794. Supervised Teaching in High-School English
Prereq.: Eng-Ed 791.

Education-History (Ed-Hist) 794. Supervised Teaching in High-School History
Prereq.: Hist-Ed 791.

Education-Home Economics (Ed-HE) 794. Supervised Teaching in High-School Home Economics
Prereq.: HE-Ed 791.

Education-Language (Ed-Lang) 794. Supervised Teaching in High-School French
Prereq.: Lang-Ed 791.
Education-Latin (Ed-Lat) 794. Supervised Teaching in High-School Latin

Education-Mathematics (Ed-Math) 794. Supervised Teaching in High-School Mathematics
Prereq.: Math-Ed 791.

Education-Music (Ed-Mus) 793. Supervised Teaching in Elementary School Music

Education-Music (Ed-Mus) 794. Supervised Teaching in High-School Music

Education-Physical Education (Ed-PE) 790. Directed Teaching of Physical Education
Prereq.: PE-Ed 792 or concurrently. 1 lec. or rec.; 2 2-hr. labs.; 3-6 cr.

Elementary Education

Except for Ed. 741-742, courses in Elementary Education are given only during the Summer Session and in Extension.

731. Workshop in Reading
An understanding of the methods and materials of instruction in reading. Skills, techniques, and attitudes necessary to insure in children a permanent love of, and an interest in reading will be demonstrated in the classroom and analyzed in discussion groups. The relationship of reading to the other language arts in the elementary schools. Should be taken concurrently with Ed. 738 and Ed. 787. 3 cr. (Offered summers only.)

733. Teaching the Language Arts
Comparison of current schools of thought with regard to language arts instruction. Discussion of procedures, materials and diagnostic and evaluative techniques. Emphasis on improving oral expression, functional and creative writing, literature and spelling. Correlation of language arts with other areas of the curriculum. 3 cr.

734. Children's Literature
The consideration of children's books and methods of using them. Lectures and the opportunity to examine and evaluate a wide variety of books for children of all ages, with emphasis on the intermediate grades. Practical demonstrations of how to correlate children's books with various special subjects. 3 cr.

735. The Teaching of Elementary School Foreign Languages
Methods and materials for the audio-lingual teaching of foreign languages in the elementary school. 3 cr.

736. The Teaching of Elementary School Social Studies
Designed to help elementary teachers develop a social-studies program. It includes a study of the methods and materials which seem to be most effective in this field. The psychological development of children of different ages. 3 cr.
737. **NEW CONCEPTS IN THE TEACHING OF ARITHMETIC**

Formation of number concepts and the development of arithmetic skills. Modern methods of teaching arithmetic are demonstrated. *Prereq.:* Teaching experience. 3 cr.

738. **WORKSHOP IN ARITHMETIC**

Designed for pre-service teachers. Combines theory and classroom demonstrations of contemporary methods of instruction in arithmetic. *Prereq.:* Should be taken concurrently with Ed. 731 and Ed. 787. 3 cr. (Offered summers only.)

739. **THE TEACHING OF ELEMENTARY SCHOOL SCIENCE**

Emphasis is placed on the learning process and the instructional techniques necessary for teaching the major concepts from science. 3 cr.

741-742. **ELEMENTARY SCHOOL TEACHER PREPARATION**

A block program including observation; psychology of learning, principles of education, principles of teaching reading, language arts, social studies, mathematics, science, and other elementary school subjects; practice teaching; and a synthesizing seminar. 16 cr. each semester.

745. **ELEMENTARY SCHOOL CURRICULUM REORGANIZATION**

The theories and procedures of curriculum development in the elementary school. 3 cr.

753. **TEACHING EXCEPTIONAL CHILDREN**

A consideration of the organization, materials, and methods suitable for the instruction of atypical children. Emphasis will be given to the teaching of creative children. Use of prose, poetry, creative dramatics, and similar teaching techniques. 3 cr.

787. **PRINCIPLES OF ELEMENTARY EDUCATION**

The underlying principles of education as applied to the teaching of children in elementary schools will be coordinated with the fundamentals of educational psychology and translated in terms of methods of teaching. Adaptations of various methods and plans as carried on in modern elementary schools. 3 cr.

807. **IMPROVEMENT OF READING**

Comparison of current schools of thought with regard to reading instruction. Discussion of procedures, materials, and diagnostic and evaluative techniques. Emphasis on small group and individual activities to assure the mastery of basic reading abilities. The use of reading in school and leisure situations. 3 cr.

808. **DIAGNOSTIC AND REMEDIAL PROCEDURES IN READING**

A study of the techniques of analysis and correction or prevention of problems in reading, spelling and language. Discussion and demonstration of diagnostic tests and remedial methods. Practice in clinical analysis, techniques of work with individuals, teams, small groups and classes. *Prereq.:* Educ. 807. 3 cr.

809. **READING CLINIC**

Practicum in improvement of reading including direct experience with children having reading difficulties. Seminars will consider individual cases and remedial procedures. 3 cr. *Prereq.:* Educ. 808 (may be taken concurrently) and permission of instructor required by June 1.
Electrical Engineering (83)

Alden L. Winn, Chairman
John B. Hraba, Graduate Adviser

To be admitted to graduate study in Electrical Engineering a student should have completed work in his major field equivalent to that currently required of undergraduates at the University of New Hampshire.

All students will be required to complete two basic courses, E.E. 801, Field Theory, and E.E. 811, Network Analysis, at the beginning of their graduate program or furnish evidence of equivalent preparation. These two courses and those numbered below 800 are normally offered annually. Other courses numbered above 800 are offered on the basis of the requirements of the graduate students. Those who intend to undertake graduate work in Electrical Engineering must consult with the department graduate adviser in order to plan their programs of study. With the consent of the department a student who through industrial experience has satisfied the objectives of a thesis may be permitted to substitute approved course work for the thesis requirement.

Courses numbered between 600 and 699 may be taken for graduate credit by non-Electrical Engineering majors only.

Permission of the instructor is required for enrollment in all Electrical Engineering graduate courses.

609. Physical Electronics
   Electron ballistics; conduction in gases, vacuum, metals, and semiconductors; theory of emission; theory of operation, characteristic curves, and equivalent circuits for electron devices such as vacuum and gas tubes, solid-state rectifiers, and transistors. 3 cr.

640. Circuits, Machinery, and Control
   Continuation of electric circuits. Application of electrical engineering principles to machines and systems. 3 lec.; 1 lab.; 4 cr.

641. Electronic Fundamentals
   Physical electronics; electronic circuits with emphasis on instrumentation. 2 lec.; 1 lab.; 3 cr.

645. Electrical Networks
   Generalized network analysis, equivalent networks, filter properties, elementary synthesis, transient and steady-state analysis of transmission lines. 3 cr.

646. Electric Fields
   Static electric and magnetic fields, electromagnetic fields, Maxwell's equations, wave equations, plane waves. 3 cr.
652. **Industrial Electronics Fundamentals**  
Application of electronics to industrial processes. 2 rec. and 1 lab.; 3 cr.

706. **Advanced Circuit Theory**  
Steady-state and transient analysis, derivation of fundamental formulas and constants, application of LaPlace transforms. Mr. Nulsen. 3 rec.; 1 conf.; 4 cr.

757. **Electronic Systems Analysis and Design**  
Advanced techniques in network and systems analysis; use of complex frequency and signal flow graphs; coding, transfer, and storage of information. 3 rec.; 1 conf.; 4 cr.

762. **Illumination**  
Radiation, fundamental processes in gases, atomic spectra, sources of visible and near visible energy, lamp circuitry, lighting and wiring design, control of light, photometry, and color. Mr. Murdoch. 2 cr.

780. **Engineering Analysis**  
The basic principles and analytical methods employed in the solution of complex problems in the various branches of engineering. E.E. Staff. 2-3 cr.

781. **Instrumentation**  
Analysis and design of equipment for measurement, instrumentation, and control. Mr. Blanchard, Mr. Clark. 3 rec.; 1 lab.; 4 cr.

782. **Control Systems**  
Fundamental principles involved in the design and analysis of feedback control systems. Mr. Blanchard, Mr. Clark. 3 rec. and 1 lab.; 4 cr.

801. **Field Theory**  
The development of Maxwell’s Equation; application of vector calculus, boundary values, and conformal mapping to static field problems; and an introductory treatment of the general wave equation. Mr. Hraba. 4 cr.

802. **Electromagnetic Wave Theory**  
Solution of the wave equation in rectangular, cylindrical, and spherical coordinates; reflection and refraction; wave guides and cavities; wave propagation in specialized media; sources; and antenna pattern formations and characteristics. Mr. Frost, Mr. Stotz. Prereq.: E.E. 801. 4 cr.

803. **Principles of Microwave Systems**  
Wave propagation in free space; dielectrics and conductors; normal modes of waveguides and cavities; interactions between traveling waves and electrons; generation at high frequencies. Prereq.: E.E. 802. Mr. Frost. 3 rec. and 1 lab. or conf.; 4 cr.

804. **Antennas**  
Theory and design of electromagnetic radiating systems. Mr. Frost. Prereq.: E.E. 802. 3 rec. and 1 lab. or conf.; 4 cr.

811. **Network Analysis**  
The application of matrices and determinants, linear graph theory, Laplace and Fourier transforms, complex-variable theory and time- and fre-
quency-domain concepts to the analysis of linear networks and systems. Mr. Murdoch. 4 cr.

812. Network Synthesis
Characteristics of one- to n-port network functions, realizability criteria and synthesis of one-, two- and three-element-kind drivingpoint and transfer functions. Mr. Murdoch. Prereq.: E.E. 811. 4 cr.

813. Nonlinear Networks
Analysis of passive networks with non-linear and time-varying parameters. Mr. Hraba. 3 rec. and 1 conf.; 4 cr.

814. Network Approximation
Network functions and topologies, dynamic and geometric independence, equivalent networks and the approximation problem in the time and frequency domains. Mr. Murdoch. Prereq.: E.E. 812. 4 cr.

815. Linear Active Circuits
The development of equivalent circuits for solid-state devices; and the analysis and design of linear networks containing these devices. Mr. Winn, Mr. Clark. 3 rec. and 1 lab. or conf.; 4 cr.

816. Nonlinear Active Circuits
Analytical and graphical techniques for circuits designed for pulse and other non-sinusoidal signals; and solid-state or vacuum-tube devices used in the switching mode. Mr. Winn. 3 rec. and 1 lab. or conf.; 4 cr.

819. Nonlinear Magnetic Devices
Magnetic amplifiers with and without feedback, magnetic devices as modulators, frequency multipliers, and in switching circuits, modern theory of magnetism, properties of square-loop magnetic material. Mr. Melvin. 4 cr.

821. Transmission and Distribution of Electric Power
Line characteristics, steady-state performance, symmetrical components, lightning and over-current protection, relaying. Mr. Goodrich. 3 rec. and 1 lab. or conf.; 4 cr.

825. Advanced Analysis of Alternating-Current Machinery
Steady-state and transient analysis of all alternating- and direct-current machines. Mr. Hraba. 3 rec. and 1 lab. or conf.; 4 cr.

840. Information Theory
Discrete and continuous probability, fundamentals of encoding, basic information theory and stochastic processes. Mr. Clark. 4 cr.

841. Applied Acoustics
The propagation of acoustical waves in elastic media, characteristics of electro-acoustical transducers, architectural acoustics. Mr. Frost. 3 rec. and 1 lab. or conf.; 4 cr.

851. Advanced Control Systems
Advanced topics in analysis and design of linear and nonlinear feedback control systems. Mr. Blanchard. Prereq.: E.E. 782. 3 rec. and 1 lab. or conf.; 4 cr.
898. Electrical Engineering Projects

Independent studies in a specialized field of electrical engineering. E.E. Staff. Admission to the course will be limited to those accepted by a staff member. 1-4 conferences or laboratory periods; 1 to 4 cr.

899. Thesis

6 cr.

English (49)

Sylvester H. Bingham, Chairman

The Department of English offers two advanced degrees, the Master of Arts and the Master of Science for Teachers. The Master of Science for Teachers is a terminal degree, one designed for the high school teacher. The Master of Arts is, primarily, the first step to the doctoral degree; the candidate will ordinarily be preparing for teaching in a college or university.

For the Master of Arts degree a reading knowledge of French, German, or Latin is required of the candidate. For the Master of Science for Teachers degree no foreign language is required.

The student who is a candidate for the degree of Master of Science for Teachers must take 30 hours of work in English numbered above 700 that will not be a repetition of his undergraduate course work.

The student who is a candidate for the Master of Arts degree must earn 30 credits: no more than 12 in literature courses numbered 750-800; 12 in literature courses numbered 850-898 (6 of which must be in graduate seminars: 885-898); and 6 credits in a thesis (899). A student taking a course numbered 850-885, though attending the undergraduate lectures, must do additional work assigned by his instructor and prepare a paper on an agreed subject connected with his study.

All graduate students, even though they attend undergraduate classes, are marked on the graduate level.

If a student intends to complete his work for the Master’s degree in one year, he should register for three thesis credits each semester.

705. English Grammar

Required of students in the English Teaching program and open to other students with permission of instructor. Mr. Goffe. 3 cr.

706. Expository Writing

Required of students in the English Teaching program and open to other students with permission of instructor. 3 cr.

709, 710, 711. Critical Analysis

Analysis of three forms of writing: 709, exposition; 710, fiction; 711, poetry. Mr. Bingham and Mr. Richardson. 3 cr.
751. **History of the English Language**  
Mr. Kispert. 3 cr.

753. **Anglo-Saxon**  
Mr. Kispert. 3 cr.

754. **Beowulf**  
Mr. Kispert. 3 cr.

755, 756. **Chaucer**  
Mr. Underwood. 3 cr.

757, 758. **Shakespeare’s Plays**  
The major histories, comedies, and tragedies. Mr. Schultz. 3 cr.

759. **Milton**  
Mr. Schultz. 3 cr. (Alternate years; offered in 1965-1966.)

760. **Boswell’s Johnson**  
Mr. Maynard. 3 cr. (Not offered in 1965-1966.)

761. **Wordsworth**  
Mr. Miller. 3 cr. (Alternate years; not offered in 1965-1966.)

762. **Browning**  
Mr. Daggett. 3 cr. (Alternate years; offered in 1965-1966.)

763, 764. **English Literature in the Sixteenth Century**  
Mr. Schultz. 3 cr. (Alternate years; not offered in 1965-1966.)

765, 766. **English Literature in the Seventeenth Century**  
3 cr. (Alternate years; offered in 1965-1966.)

767, 768. **English Literature in the Eighteenth Century**  
Mr. Maynard. 3 cr. (Alternate years; offered in 1965-1966.)

769, 770. **The English Romantic Period**  
Wordsworth, Coleridge, Lamb, Hazlitt, Byron, Shelley, Keats, DeQuincey.  
Mr. Miller. 3 cr. (Alternate years; offered in 1965-1966.)

771, 772. **Victorian Prose and Poetry**  
Major non-fictional prose from Carlyle to Stevenson and major poetry  
from Tennyson to Hardy. Mr. Miller. 3 cr. (Alternate years; not offered in 1965-1966.)

773, 774. **British Literature of the Twentieth Century**  
Mr. Richardson. 3 cr. (Alternate years; not offered in 1965-1966.)

775. **New England Renaissance**  
Emerson, Thoreau, and other transcendentalists. Mr. Daggett. 3 cr. (Alternate years; not offered in 1965-1966.)

776. **American Novel in the Nineteenth Century**  
Mr. Webster. 3 cr. (Alternate years; not offered in 1965-1966.)
777. American Poetry of the Nineteenth Century
Mr. Daggett. 3 cr. (Alternate years; offered in 1965-1966.)

779, 780. American Literature of the Twentieth Century
Mr. Nicoloff. 3 cr. (Alternate years; offered in 1965-1966.)

781, 782. Introduction to English Drama
The development of English drama, exclusive of Shakespeare, from the Middle Ages to the present. 3 cr. (Alternate years; offered in 1965-1966.)

783, 784. The English Novel of the Eighteenth and Nineteenth Centuries
Mr. Bingham and Mr. Miller. 3 cr. (783 not offered in 1965-1966.)

855, 856. Chaucer
3 cr.

857, 858. Shakespeare
3 cr.

859. Milton
3 cr. (Alternate years; offered in 1965-1966.)

860. Boswell's Johnson
3 cr. (Not offered in 1965-1966.)

861. Wordsworth
3 cr. (Alternate years; not offered in 1965-1966.)

862. Browning
3 cr. (Alternate years; offered in 1965-1966.)

863, 864. English Literature in the Sixteenth Century
3 cr. (Alternate years; not offered in 1965-1966.)

865, 866. English Literature in the Seventeenth Century
3 cr. (Alternate years; offered in 1965-1966.)

867, 868. English Literature in the Eighteenth Century
3 cr. (Alternate years; offered in 1965-1966.)

869, 870. The English Romantic Period
3 cr. (Alternate years; offered in 1965-1966.)

871, 872. Victorian Prose and Poetry
3 cr. (Alternate years; offered in 1965-1966.)

873, 874. British Literature of the Twentieth Century
3 cr. (Alternate years; not offered in 1965-1966.)

875. The New England Renaissance
3 cr. (Alternate years; not offered in 1965-1966.)

876. The American Novel in the Nineteenth Century
3 cr. (Alternate years; not offered in 1965-1966.)

877. American Poetry of the Nineteenth Century
3 cr. (Alternate years; offered in 1965-1966.)
879, 880. American Literature of the Twentieth Century
3 cr. (Alternate years; offered in 1965-1966.)

881, 882. An Introduction to English Drama
3 cr. (Alternate years, offered in 1965-1966.)

883, 884. The English Novel of the Eighteenth and Nineteenth Centuries
3 cr. (883 not offered in 1965-1966.)

885, 886. Seminar — Problems in Medieval Literature
Mr. Underwood. 3 cr.

887. Seminar — Problems in Literature and Thought, 1570-1670
Mr. Schultz. 3 cr.

888. Seminar — Problems in Milton Scholarship and Criticism
Mr. Schultz. 3 cr.

899. Master's Thesis
6 cr.

Entomology (29)
James G. Conklin, Chairman

For admission to graduate study in Entomology an applicant is expected to have had adequate preparation in undergraduate Entomology and related sciences. Students lacking the necessary background courses may be required to complete certain courses which do not carry graduate credit before they are admitted to candidacy for a degree.

The program of graduate study is designed to meet the needs of those students who are planning to take further work leading to a career in professional entomology.

A thesis is required of all candidates for the Master's degree.

704. Medical Entomology
Insects and arachnids in relation to public health. The more important disease carriers, their biologies, and means of control. Adapted especially for students who are interested in public health or medicine. Elective for juniors and seniors. Mr. Blickle. 2 lec.; 1 lab.; 3 cr.

707-708. Advanced Entomology
The anatomy and physiology of insects. Systematic entomology. Mr. Conklin and Mr. Blickle. Open to others than Entomology majors by permission of the Department Chairman. 2 lec.; 2 lab.; 4 cr.

709-710. Advanced Economic Entomology
Problems in applied Entomology and apiculture; the literature of economic entomology. Investigational methods. Studies of the specialized phases of entomology. Mr. Conklin and Mr. Blickle. Required of Entomology majors. Open to others than Entomology majors by permission of the Department Chairman. 1 to 3 cr.
Foreign Languages and Literatures
Charles H. Leighton, Chairman

The Department of Foreign Languages and Literatures offers courses leading to two degrees, Master of Arts and Master of Science for Teachers.

To be admitted to graduate study for the M.A. degree in a foreign language, a student must have met requirements substantially equal to those set up for an undergraduate major in that language at the University. To obtain the degree, the student must fulfill a course requirement and submit an acceptable thesis.

All candidates for admission to the graduate program in Languages must submit general Graduate Record Examination scores and, where possible, the Advanced Test in the particular language and literature in which the student intends to do his work.

To satisfy the course requirement, he must complete at least 24 credits of graduate work selected from the courses listed below (6 credits are granted for the thesis thus completing the total of 30 established by the graduate School as requisite for the degree.) Of the 24 credits, 18 must be in his major language and 6 may be selected from the courses in General Language and Literature or from courses in a related literature.

To take a course numbered 840-898, a student must register for the corresponding undergraduate course numbered 740-798, pass it with a grade of B or better, do supplementary work assigned by the instructor and prepare a paper of graduate-quality on a topic assigned by the instructor. No student may register for a graduate course if he has already taken the corresponding undergraduate course here or its equivalent elsewhere.

Before undertaking work on the thesis, the student must pass a comprehensive written examination in the language and literature of his major field of specialization. The examination will be given four times a year: in January, May, August, and September. The candidate will be permitted to take the examination only twice. If he fails in his first attempt, he must wait at least three months before taking it again.
The thesis must embody the results of independent investigation and be written in a form acceptable to the Department. It must be submitted to the Thesis Director before April 20 of the academic year in which the degree is to be granted.

To be admitted to graduate study for the M.S.T. degree in a foreign language, a candidate must have satisfactorily completed the requirements for secondary school teacher certification in that language. To obtain the degree, he must complete 30 semester hours of work at the graduate level. Since it is intended for teachers already in service, courses leading to this degree will normally be chosen from Summer Session offerings. Moreover, a maximum of 9 credits may be transferred from National Defense Education Foreign Language Institutes and counted toward the degree. Secondary school teachers interested in this degree should consult the Department Chairman.

**General Language and Literature (55)**

772. **Applied Linguistics**

Designed to acquaint teachers and others with the techniques and practical application of modern structural linguistics. *Prereq.*: Permission of the instructor. 3 cr.

773. **Introduction to Romance Philology**

The historical development of French and Spanish from Vulgar Latin. Phonology, morphology, syntax, semantics, etymology. Frequent reference is made to the spoken languages of today as well as to comparative semantics. *Prereq.*: Permission of instructor. 3 cr.

880. **Foreign Language Institute**

The work at this institute will consist of: applied linguistics (techniques and practical application of modern structural linguistics in the teaching of a modern foreign language); methods and measurements in the teaching of a foreign language (objectives, methods and devices both in the classroom and in the language laboratory); intensive practice in the spoken language and language analysis; and culture and civilization (dealing with the most significant aspects and trends of the areas where the target language is spoken). *Prereq.*: Admission to Institute. 3 to 9 cr.

**Languages-Education (Lang-Ed) 791. Problems in the Teaching of Modern Languages in the High School**

The special objectives, methods, and devices of modern language teaching in high school. For prospective or actual teachers of French, German, and Spanish. *Prereq.*: Intermediate French, German, Spanish; and grade of C or better in Ed. 758 or one year’s teaching experience.

**French (56)**

741. **French Literature of the Middle Ages**

Readings in the epic, lyric poetry and the romance. Conducted in French. *Prereq.*: Fr. 506. 3 cr. (Alternate years; offered in 1965-1966.)
742. French Literature of the Renaissance
Rabelais, Marguerite de Navarre, Ronsard, Du Bellay, Montaigne and others. Conducted in French. Prereq.: Fr. 506. 3 cr. (Alternate years; offered in 1965-1966.)

759-760. French Literature of the Seventeenth Century
759: Historical and literary background of French classicism, poetry, Corneille, Pascal, and Molière's early plays. 760: Molière, Racine, LaFontaine, Mme. de LaFayette, Boileau, and LaBruyère. Lesage, the beginning of the philosophical movement. Conducted in French. Prereq.: Fr. 506. 3 cr. (Alternate years; not offered in 1965-1966.)

761-762. Eighteenth Century French Literature and Thought
761: Precursors of Age of Enlightenment — Bayle, Fontenelle, Montesquieu; Voltaire's early works; Marivaux and others.
762: Diderot, Encyclopedists, later Voltaire, Laclos, Rousseau and others. Conducted in French. Prereq.: Fr. 506. 3 cr. (Alternate years; not offered in 1965-1966.)

767-768. Nineteenth Century French Literature
767: Romanticism; Mme. de Stael, Chateaubriand, Lamartine, Hugo, Vigny, Musset. 768: Late Romanticism; Realism; Stendahl, Balzac, Flaubert, Hugo, the Parnassian school. Conducted in French. Prereq.: Fr. 506. 3 cr. (Alternate years; offered in 1965-1966.)

770. Introduction to Modern French Poetry
Baudelaire, Rimbaud, Mallarmé, Valéry, and others. Prereq.: 506. 3 cr. (Alternate years; offered in 1965-1966.)

781-782. Contemporary French Novel and Theater
781: Zola, the Concourts, Proust, Gide, Becque, Maeterlinck, and others.
782. Mauriac, Malraux, Bernanos, Sartre, Camus, Claudel, Pagnol, Anouilh, Giraudoux, and others. Conducted in French. Prereq.: Fr. 506. 3 cr. (Alternate years; not offered in 1965-1966.)

790. Advanced Language and Style
Translation of literary texts, intensive study of the principal techniques of style, explication de textes. Open to qualified students who have had a minimum of six hours of French courses numbered 641 and above. 3 cr. (Alternate years; offered in 1965-1966.)

795, 796. Special Studies in French Language and Literature
Individual guided study in special topics, with training in bibliography and organization of material. Examples of topics which may be selected are: the work of a major French author, specific topics in any area of French literature, such as literary criticism in the Seventeenth Century. Staff. Prereq.: Permission of the Section Supervisor. Variable credit.

841. French Literature of the Middle Ages
Prereq.: Fr. 506. 3 cr. (Alternate years; offered in 1965-1966.)

842. French Literature of the Renaissance
Prereq.: Fr. 506. 3 cr. (Alternate years; offered in 1965-1966.)

859-860. French Literature of the Seventeenth Century
Prereq.: Fr. 506. 3 cr. (Alternate years; not offered in 1965-1966.)
361-362. Eighteenth Century French Literature
Prereq.: Fr. 506. 3 cr. (Alternate years; not offered in 1965-1966.)

367, 368. Nineteenth Century French Literature
Prereq.: Fr. 506. 3 cr. (Alternate years; offered in 1965-1966.)

370. Introduction to Modern French Poetry
Prereq.: Fr. 506. 3 cr. (Alternate years; offered in 1965-1966.)

381-382. Contemporary French Novel and Theater
Prereq.: Fr. 506. 3 cr. (Alternate years; not offered in 1965-1966.)

(890). Advanced Language and Style
Prereq.: Open to qualified students who have had a minimum of six hours
of French courses numbered 641 and above. 3 cr. (Alternate years; offered
in 1965-1966.)

385, 386. Special Studies in French Language and Literature
Prereq.: Permission of Section Supervisor. Variable credit.

389. Master’s Thesis
6 cr.

German (57)

755. German Literature of the Age of the Baroque
German literature between Reformation and the Age of Enlightenment. Reading, interpretation, and critical analysis of prescribed prose, drama, and poetry with emphasis on the philosophical and social ideas of the time. Prereq.: Ger. 605-606. 3 cr. (Alternate years; offered in 1965-1966.)

756. German Literature of the Age of Enlightenment
German literature from the Baroque period to the beginning of the period of Storm and Stress with emphasis on readings and interpretations of works of Lessing and Wieland. Prereq.: Ger. 605-606. 3 cr. (Alternate years; offered in 1965-1966.)

757-758. The Age of Goethe
German literature of Storm and Stress and the Classical Period. Interpretation and critical analysis with emphasis upon selected works of Wagner, Klinger, Lenz, Schiller, and Goethe. Prereq.: Ger. 606. 3 cr. (Alternate years; offered in 1965-1966.)

759-760 German Romanticism
German literature from the end of the Eighteenth Century to 1830. Interpretation and critical analysis of prescribed prose, drama, and poetry of prominent writers and poets of the period, from Wackenroder to Eichendorff. Prereq.: Ger. 606. 3 cr. (Alternate years; not offered in 1965-1966.)

761-762. The Age of Realism
Representative German writers, dramatists, poets, and novelists from the end of Romanticism to the beginning of Naturalism (1830-1880) will be read and discussed with a background of social and philosophical development. Prereq.: Ger. 606. 3 cr. (Alternate years; not offered in 1965-1966.)
763-764. German Literature Since 1880.
From Naturalism to the present. Reading, interpretation, and critical analysis of prescribed prose, drama and poetry of Hauptmann, Hofmannstal, Rilke, Mann, Kafka. Prereq.: Ger. 606. 3 cr. (Alternate years; offered in 1965-1966.)

781, 782. History and Development of the German Language and Advanced Stylistics
A systematic study of style, shades of meaning, adequacy of expression. A thorough knowledge of German grammar is prerequisite. Practice in writing seminar papers and obtaining stylistic flexibility in the use of written German. Prereq.: Ger. 605-606. 3 cr.

795, 796. Special Studies in German Literature
Individual guided study in special topics, with training in bibliography, note taking, organization of material. Examples of topics which may be selected by instructor and student in conference are: (1) Wolfram von Eschenbach: Parzival; (2) Walther von der Vogelweide: Lyrics; (3) Middle High German Popular Epics; (4) German Literature of the 17th Century; (5) Goethe's Poetry; (6) Goethe's Faust; (7) Heinrich v. Kleist; (8) German Romanticism; (9) 20th Century German Literature. Prereq.: Permission of Section Supervisor. Variable credit.

855. German Literature of the Age of the Baroque
Prereq.: German Civilization and Literature. 3 cr. (Alternate years; offered in 1965-1966.)

856. German Literature of the Age of Enlightenment
Prereq.: German Civilization and Literature. 3 cr. (Alternate years; offered in 1965-1966.)

857-858. The Age of Goethe
Prereq.: German Civilization and Literature. 3 cr. (Alternate years; offered in 1965-1966.)

859-860. German Romanticism
Prereq.: German Civilization and Literature. 3 cr. (Alternate years; not offered in 1965-1966.)

861-862. The Age of Realism
Prereq.: German Civilization and Literature. 3 cr. (Alternate years; not offered in 1965-1966.)

863-864. German Literature Since 1880
Prereq.: German Civilization and Literature. 3 cr. (Alternate years; offered in 1965-1966.)

881, 882. History and Development of the German Language and Advanced Stylistics
Prereq.: German Civilization and Literature. 3 cr.

895, 896. Special Studies in German Literature
Prereq.: Permission of Section Supervisor. 3 cr.

899. Master's Thesis
6 cr.
Spanish (62)

751. Spanish Literature up to 1600

Readings and discussion of the great human creations of early Spanish Literature, such as El Poema de Mio Cid, El Libro de Buen Amor and La Celestina, and their social and historical background. The course will cover Spanish literature before Cervantes. **Prereq.:** Sp. 505 or equivalent. 3 cr.

752. Drama and Poetry of the Siglo de Oro

The social background of the baroque period. Readings of representative plays of Lope de Vega, Tirso de Molina, Calderon, and the poetry of Lope Gongora and Quevedo. Development of the prose of the period. **Prereq.:** Sp. 506 or equivalent. 3 cr.

754. Cervantes

This course traces the development of Cervantes’ literary art. Reading and discussion of selections from all the major works of Cervantes. Comprehensive study of the Quijote, its originality and significance, its antecedents, its religious, philosophical and sociological aspects, and its artistic structure. Conducted in Spanish. **Prereq.:** Span. 506 or equivalent. 3 cr.

755. Literature of the Nineteenth Century

Preliminary survey of the Eighteenth Century and readings and discussion in the main literary movements of the Nineteenth Century. Selections from Quintana, Espronceda, Zorrilla, Larra, Duque de Rivas, Becquer, Perez Galdos, Valera, Pereda, Clarin, and Echegaray. Social and historical background of Spain in relation to Nineteenth Century thought in Europe. **Prereq.:** Sp. 506 or equivalent. 3 cr.

756. Contemporary Spanish Literature

Starting with the generation of 1898, readings and discussion of the works of such writers as Unamuno, Azorin, Baroja, Machado, J. R. Jiménez, Ortega y Gasset, Garcia Lorca, Pérez de Ayala, Benavente, Casona, plus a survey of Spanish literature and thought since 1939. **Prereq.:** Sp. 506 or equivalent. 3 cr.

765, 766. Spanish American Literature

The main themes of Spanish American literature studied in the works of its most representative authors and against the historical, social and geographical background of the New World. **Prereq.:** Sp. 506 or equivalent. 3 cr.

795, 796. Special Studies in Spanish Language and Literature

Individual guided study in special topics, with training in bibliography, note taking, and organization of material. Examples of topics that may be selected by instructor and student in conference are: (1) 18th, 19th, or 20th century literature in Spain; (2) literature and civilization in Spain in the Golden Age; (3) the literature of individual Latin-American countries. Staff. **Prereq.:** Permission of Section Supervisor. Variable credit.

851. Spanish Literature up to 1600

**Prereq.:** Sp. 505 or equivalent. 3 cr.

852. Drama and Poetry of the Siglo De Oro

**Prereq.:** Sp. 506 or equivalent. 3 cr.
854. Cervantes
  *Prereq.*: Sp. 506 or equivalent. 3 cr.

855. Literature of the Nineteenth Century
  *Prereq.*: Sp. 506 or equivalent. 3 cr.

856. Contemporary Spanish Literature
  *Prereq.*: Sp. 506 or equivalent. 3 cr.

865-866. Spanish American Literature
  *Prereq.*: Sp. 506 or equivalent. 3 cr.

895, 896. Special Studies in Spanish Language and Literature
  *Prereq.*: Permission of Section Supervisor. 3 cr.

899. Master’s Thesis
  6 cr.

Forestry (30)
  Paul E. Bruns, *Chairman*

Students admitted to graduate study in Forestry are expected to have completed a course of study equivalent to that required for the degree of Bachelor of Science in Forestry. Those who lack undergraduate training in any of the necessary fields may be required to complete certain courses in these subjects without graduate credit before being admitted to candidacy for a degree.

Candidates for the Master’s degree in Forestry must pass an oral examination. A thesis may or may not be required.

701. Statistical Methods II
  An intermediate course in statistics. All students elect the applied phase with the basic phase optional for additional credit. Applied phase presents concepts of statistical models, tests of significance, analysis of variance in one-way and multiway classifications, and factorial experiments. Introduction to covariance, multiple regression, and analysis with unequal subclass numbers; introduction to chi-square tests, discrete distributions, non-parametric statistics, and sampling. Basic phase parallels and supplements applied phase; algebraic derivation of computing formulae, study of models and derivation of expected values; matrix representation of experimental design and multiple regression models; introduction to least squares. Mr. Barrett. *Prereq.*: An elementary statistics course. 3-4 cr.

730. Forest Tree Improvement
  A consideration of the genetics of forest tree improvement with emphasis on variation in natural populations, the basis for selection of desired characters and the fundamentals of controlled breeding. The application of principles will be directed toward silviculture, management and utilization. Mr. Hocker. *Prereq.*: Permission of instructor. (Alternate years; offered in 1965-1966.) 2 lec.; 1 lab.; 3 cr.
734. Forest Fish and Game

The characteristics of the more important species present in Northeastern forests, together with some consideration of the management techniques applicable to each. Mr. Olson. Elective with approval of the instructor. 2 lec.; 1 lab.; 3 cr.

742. Forest Engineering

Design of logging road systems with an emphasis on the economics involved. Field work in road layout. Mr. Foster. Prereq.: Permission of the instructor. Two weeks' field session in June; 3 cr.

746. Forest Management Resource Survey

Forest land use coordination. Multiple uses treated separately and as integrated concurrent uses of forested lands. Forest management for water, recreation, wildlife and range benefits. Mr. Weyrick. Prereq.: Permission of the instructor. 3 lec.; 1 lab.; 4 cr.

755, 756. Forest Game Management

Readings and discussions on the properties of game populations, and the various phases of management, including public relations. The principles of forest game management and the preparation of a working plan for the management of forest and wildlife resources on a specified area. The student may be required to spend several week-ends working with the State Fish and Game Department, helping with investigational projects. Mr. Olson. 2 lec.; 1 4-hr. lab.; 4 cr.

758. Photogrammetry in Forestry

Elementary principles of photogrammetry with emphasis on their application to all phases of forestry. The value and use of aerial photos in forest typing, planimetric, and topographic mapping; measurement of area and volume estimation. Mr. Barrett. Prereq.: Permission of instructor. 2 lec.; 1 lab.; 3 cr.

763. Forest Recreation

The extent, developments, and conflicts in the recreational use of wild lands of North America. Relationships to the conservation of natural resources are considered. Prereq.: Permission of the instructor. Mr. Wallace. 3 lec.; 3 cr.

764. Forest Industry Economy

Economy in productive enterprise — logging and manufacturing of forest products; control of harvesting costs as a factor in intensifying applied forest management; planning for minimum cost operations. Mr. Wallace. Prereq.: Permission of the instructor. 2 lec.; 1 lab.; 3 cr.

801, 802. Forest Management Seminar

Seminar discussions of current literature, plans and principles, and new developments in the general field of forest management. Mr. Bruns and members of the department. 2 rec.; 2 cr. Prereq.: Permission of the instructor.

803. Approach to Research

The meaning of science and the scientific method. The application of logic in the scientific method. The general principles and techniques of scientific research. A general survey of statistical procedures as a tool for research. The organization of investigative work including problem analyses, working
plans, and the preparation of reports. Mr. Wallace, Mr. Hocker, and others. 2 cr. Prereq.: Permission of the instructor.

805. **Utilization Seminar**

Conferences, discussions, and reports on assigned topics. Consideration of current literature and developments in the general field of wood utilization. Mr. Hill. Prereq.: Permission of the instructor. 2-hour seminar; 2 cr.

806. **Logging Economics Seminar**

Conferences, discussions, and reports on assigned topics. Considerations of current developments in the field of raw material procurement. Mr. Foster. Prereq.: Permission of the instructor. 2-hour seminar; 2 cr.

809, 810. **Wildlife Management Seminar**

Discussions and assigned reports on current investigations and developments in wildlife management. Mr. Olson. Prereq.: Undergraduate courses in wildlife management. 2-hour seminar; 2 cr.

815. **Advanced Mensuration**

Volume table construction and application, advanced studies of growth and yield and methods of prediction. Application of graphic and statistical solutions to these problems. Mr. Barrett. Prereq.: Permission of the instructor. 2 lec.; 1 lab.; 3 cr.

818. **Advanced Photogrammetry in Forestry**

The application of aerial photogrammetrical techniques to specific forestry problems. The use of photographs for volume estimation including cull, volume tables, and species composition; use in fire control, range, timber and recreational management, road location, allocation of cut, and in designing large-scale resource inventories. Mr. Barrett. Prereq.: Permission of the instructor. 2 cr.

833. **Forest Protection Seminar**

Discussion and special problems based on the principles and techniques of forest protection. Prereq.: For. 659 or equivalent. 3 cr.

Work to be arranged according to the needs of individual students. Staff. Hours to be arranged. Prereq.: Permission of the instructor. 2-4 cr.

899. **Thesis**

Hours and credits to be arranged to meet the needs of the individual student. Prereq.: Graduate standing, and the permission of the instructor in the selected field of study. 6-10 cr.

**Genetics Program**

Walter M. Collins, Chairman

The interdepartmental Genetics Program offers graduate work leading to the degrees of Doctor of Philosophy and Master of Science.
A qualified student is admitted to the program with the approval of the chairman of the Genetics Program and the chairman of the department in which he has a major interest. Students will be expected to have adequate preparation in the biological and physical sciences including mathematics. Students lacking these requirements may be admitted but will be required to complete certain courses without graduate credit.

The Program is conducted by faculty members from the departments of Animal Sciences, Botany, Forestry, Microbiology, Plant Science, and Zoology as well as other faculty from the Agricultural Experiment Station and the U. S. Forest Service Northeastern Forest Experiment Station. Areas of specialization in the program are: animal genetics, cytology and cytogenetics, and plant genetics.

**Master of Science Degree**

The program for the Master of Science degree is formulated by the student with the approval of his guidance committee. Candidates for the M.S. degree will be required to complete a thesis and pass an oral examination covering his graduate courses and thesis.

**Doctor of Philosophy Degree**

The chairman of the Genetics Program with the concurrence of the chairman of the department of major interest will nominate the student's guidance and doctoral committees. Specific course requirements will be developed by the student and his guidance committee. Students must demonstrate a reading knowledge of two foreign languages, usually French and German, and must complete a dissertation on original research in genetics.

**Courses Available in the Genetics Program**

**Genetics (97)**

802. Design of Experiments

The philosophy of experimental design and how it relates to standard statistical designs. Topics include the roles of replication and randomization, factorially arranged treatments, latin squares, incomplete nonfactorial designs, fractional replication and confounding, and crossover designs. Mr. Urban. Prereq.: For. 701 or permission of instructor. 3 cr. (Alternate years; offered in 1965-1966.)

812. Advanced Statistical Methods

Methods and techniques for handling typical problems which arise in the analysis of data. Topics include the multiple comparison of means, analysis of unweighted means, proportional subclass numbers, weighted squares of
means, orthogonal polynomials and least squares. Mr. Urban. Prereq.: For. 701 or permission of the instructor. 3 cr. (Alternate years; not offered in 1965-1966.)

821. Biometrical Genetics

Statistical aspects of estimating genetic parameters associated with quantitative traits. The estimation of components of variance from various experimental designs, phenotypic and genotypic correlations, construction of selection indices, and the use of collateral and ancestral relatives to estimate breeding value. Mr. Urban. Prereq.: Genetics 812 and either An. Sc. 703 or Pl. Sc. 774. 3 cr. (Alternate years; not offered in 1965-1966.)

898. Genetics Seminar

Presentation and discussion of selected genetic topics. Staff. 1 cr. May be repeated.

899, (899). Master’s Thesis

6-10 cr.

999, (999). Doctoral Research

Courses Available in the Cooperating Departments

These courses are fully described below and under the course descriptions of the appropriate department for the convenience of the student.

Animal Sciences (25)

703. Animal Genetics

The principles of Mendelian and quantitative genetics applied to livestock and poultry; selection and breeding systems in genetics improvement and their evaluation. Mr. Collins. Prereq.: Zool. 706 or permission of instructor. 2 lec.; 1 lab.; 3 cr.

811-812. Advanced Poultry Genetics

First semester: genetic and environmental variation; methods of statistical analysis fundamental to biological research, including variance components analysis and principles of partitioning hereditary variance. Second semester: principles of quantitative inheritance including changes in gene frequency, selection, inbreeding and outbreeding. Methods of estimating heritability and genetic correlations. Mr. Collins. 3 cr.

Botany (27)

754. Cytology

The structure, physiological behavior, and development of cells. The cellular basis of heredity. Mr. Schreiber. Prereq.: One year each in the biological sciences and in chemistry. 3 cr.

764. Microtechnique

Methods of embedding, sectioning, and staining plant tissues, and introduction to microscopy. Miss Nast. Prereq.: Bot. 1 or Bot. 3. 3 cr.

770. Molecular and Submolecular Biology

An extensive study of several basic molecular and submolecular biological systems, and consideration of the instrumentation employed in the
study of these systems. Mr. Nugent and Mr. Chapman. Prereq.: Cytology and permission of the instructor. 3 cr.

Forestry (30)

701. Statistical Methods II
An intermediate course in statistics. All students elect the applied phase with the basic phase optional for additional credit. Applied phase presents concepts of statistical models, tests of significance, analysis of variance in one-way and multiway classifications, and factorial experiments. Introduction to covariance, multiple regression, and analysis with unequal subclass numbers; introduction to Chi-square tests, discrete distributions, non-parametric statistics and sampling. Basic phase parallels and supplements applied phase; algebraic derivation of computing formulae, study of models and derivation of expected values; matrix representation of experimental design and multiple regression models; introduction to least squares. Mr. Barrett. Prereq.: An elementary statistics course. 3-4 cr.

730. Forest Tree Improvement
A consideration of the genetics of forest tree improvement with emphasis on variation in natural populations, the basis for selection for desired characters and the fundamentals of controlled breeding. The application of principles will be directed toward silviculture, management, and utilization. Mr. Hocker. Prereq.: Permission of instructor. 2 lec.; 1 lab.; 3 cr. (Alternate years; offered in 1965-1966.)

Microbiology (47)

803. Microbial Cytology
The fine structure of bacteria and related organisms (Procaryotic Pro-tists). Application of current techniques for the demonstration and isolation of external appendages, cell walls, cytoplasmic membrane, protoplasts, inclusions, and chromatin bodies. Mr. Hageage. Prereq.: Microb. 701. 2 lec.; 2 lab.; 4 cr.

804. Microbial Genetics
An introduction to genetic principles and methodology applicable to microorganisms; fine structure of genetic material, mutation, selection, adaptation, recombination, transformation, and transduction. Mr. Hageage. Prereq.: Permission of the instructor. 2 lec.; 2 lab.; 4 cr.

Plant Science (32)

774. Methods and Theory of Plant Breeding
History and use of plant breeding systems, including bulk and pedigree methods, recurrent selection, gamete selection and testing. Mr. Peirce. Prereq.: 3 cr. in genetics. 3 cr. (Alternate years; offered in 1965-1966.)

851. Plant Genetics
Linkage, polyploidy, aneuploidy, cytoplasmic inheritance, mutation and complex loci. Mr. Dunn. Prereq.: Zool. 706 or equivalent. 3 lec.; 3 cr. (Alternate years; not offered in 1965-1966.)

853. Cytogenetics
Chromosome aberrations and their behavior. Effect of radiation on chromosomes. Mapping and laboratory technique in cytogenetic analysis. Mr. Rogers. 2 lec.; 1 lab.; 3 cr. (Alternate years; offered in 1965-1966.)
Zoology (70)
(706), 706. Genetics
The physical basis of inheritance, expression, and interaction of the hereditary units, linkage, and variation. The application of Mendelian principles to plant and animal breeding. Mrs. Richardson. Prereq.: Zool. 412 or equivalent. 3 lec.; 1 lab.; 4 cr.

736. Advanced Genetics
Genetic recombinations and mutations, gene action in terms of physiological effects at the developmental and adult stages. Mr. Hoornbeck. Prereq.: Zool. 706 or equivalent. 3 cr.

738. Advanced Genetics Laboratory
Problems and projects with small mammals and Drosophila, stressing physiological genetics. Student background and interest to determine content. Mr. Hoornbeck. Prereq.: Zool. 736 or equivalent. 2 cr.

Government (52)
John T. Holden, Chairman

A candidate for the degree of Master of Arts in Government is required to complete at least 30 credits of acceptable work. In addition the candidate must show evidence through a written examination of a mastery in three basic areas in Government agreed upon between the student and his adviser. At the option of the Department Chairman, any student may be orally examined on his thesis by a committee selected by the Chairman and approved by the Dean of the Graduate School. He shall show evidence of competence in one foreign language or in statistics.

Generally his program shall consist of 18 credits in Government courses, including 6 credits for the thesis, and 12 credits in courses from related fields. Government courses shall be selected from those numbered 800-899. With the consent of the adviser, 3 credits may be selected in courses numbered 700-799.

The Government Department offers a Master of Public Administration degree. This degree is designed for individuals intending to pursue a career in administration. The program provides a basic understanding of the administration of public affairs in diverse contexts. In addition to meeting the admission requirements of the Graduate School, candidates for the M.P.A. must demonstrate a professional intent.

Candidates must complete 30 credits of acceptable course work within a generally prescribed curriculum. Nine credits must be in courses dealing with administration as a socio-economic process. Unless equivalent courses have been taken, all candidates
must enroll in statistics, public finance, personnel administration, and research in government problems. The balance of the course material is selected to suit the candidate’s particular interests: planning, comparative administration, social welfare, foreign service, or educational administration.

Candidates who have not been in administrative work of a governmental nature prior to entering the program are expected to serve a three- to six-month internship in an agency of their choosing. At the conclusion of this period, the candidate shall submit an analytical appraisal of his operating position to the Government Department. This report should reveal a depth of perception into the candidate’s administrative position and should analyze those problems and viewpoints discussed in the classroom which he deems most relevant to his particular situation. Experienced public employees who enter the program are expected to submit a similar report about the agency with which they are the most familiar, but this should be done prior to completing the 30-credit requirements.

717. Continental European Political Parties

The relationship of theories of representation and political parties to historical circumstance. Following an appraisal of today’s party systems, chronological treatment serves to show how changes within and among political parties are connected with the changing role parties play in the political process. Mr. Wurzburg. Prereq.: Permission of the Department. 3 cr.

726. Pressure Groups and the Governmental Process

Political interest groups as an unofficial “third house” of American national and state legislatures. The efforts by pressure groups to influence public officials by lobbying, propaganda, and direct political action. Mr. Ford. Prereq.: Gov. 406. 3 cr. (Alternate years; not offered in 1965-1966.)

731. The Administrative Process

The principal concepts of governmental administration, including theories of organization, administrative leadership, internal management, and administrative responsibility and control. The relationship of group behavior and policy development to the administrative process. Mr. Howard. Prereq.: Gov. 406 or Soc. 400. 3 cr.

741. Administration of Justice

A comparative study from primitive times to the present of the administration of criminal and civil justice under various legal institutions and systems. The modern role of the police, public prosecutor, judge, jury, counsel, and interest groups in the judicial process in the United States and in other nations, including England and Wales, France, Germany, and the Soviet Union. Mr. Dishman. 3 cr. (Not offered in 1965-1966.)

742. The Supreme Court and the American Constitution

The Supreme Court considered as both a court of law and a political institution. The origins and development of judicial review and changing
conceptions of the judicial process. The Supreme Court as supreme arbiter in disputes between the nation and the states, the President and Congress, and majority rule and minority rights. Mr. Dishman. Prereq.: Gov. 406 or permission of the instructor. 3 cr.

745. World Politics
The basic driving forces in international relations, including the nature of political power and its extension or limitations. Geopolitics, nationalism, ideology, imperialism, international economic relations, balance of power, warfare, regulation of arms, international law, and collective security. Mr. Holden. 3 cr.

746. Foreign Policies of the Great Powers
Fundamental factors influencing contemporary foreign policy formulation in the United States, the Soviet Union, the British Commonwealth, and other significant powers. Problems and choices confronting policy makers of these powers in dealing with issues involving the United Nations, regional organizations, Western Europe, Middle East, and Asia. Mr. Holden. 3 cr.

751. Contemporary Southeast Asia
A comparative study of the political and social development of Southeast Asia. The significance of the role of independence and dependence; the competing influence of communism and Western democracy; the special significance of the role of China, India, Great Britain, and the United States. The states to be studied include the Philippines, Laos, Cambodia, Viet Nam, Viet Minh, Thailand, Burma, Malaya, and Indonesia. Mr. Holden. 3 cr. (Alternate years; offered in 1965-1966.)

752. Governments of Emerging Countries
A comparative study of recent developments in the politics and governing systems of Asia and Africa, and regional arrangements indigenous to these areas. Prereq.: Gov. 405 or permission of instructor. 3 cr. (Alternate years; offered in 1965-1966.)

754. Governments of Latin America
A comparative study of the politics and governing systems of Latin America with some consideration given to regional arrangements. Prereq.: Gov. 405 or permission of instructor. 3 cr. (Alternate years; not offered in 1965-1966.)

763. Political Thought in the West
The principal political theories from Plato and Aristotle to the beginning of the modern liberal tradition. The growth and development of political thinking and institutions in terms of the development of modern government. The development of the modern nation state and its fundamental institutions. Mr. Jaffe. 3 cr.

764. Modern Political Thought
Modern Western political thought from the emergence of the nation state to the present. The meaning and growth of the basic patterns of thought on the Continent and in England, including liberalism, democracy, nationalism, socialism, communism, and facism. The contributions of American political thought as it grew from its English origins to the development of the American constitutional system. Mr. Jaffe. 3 cr.
765. Contemporary Political Theory
A survey and analysis of contemporary political theories. The crisis in
democratic thought, totalitarian ideology, the search for scientific political
theory. Prereq.: Gov. 763, 764 or permission of instructor. 3 cr. Mr. Jaffe.

771, (771). Research in Government Problems
Independent study of the methods and techniques of research in various
fields of government. Students analyze the economic, social, and political
structure of their own community, the composition and organization of
their state legislature, the record of their Representative in Congress or
one of their Senators, the legislative history of an act of Congress and the
judicial process as exemplified by a decision of the U. S. Supreme Court.
Students not writing a profile of their home community will be expected
to write an extended thesis on some topic of their choice in any field of
political science. Open to junior majors in government and others with
permission of the instructor. Mr. Dishman. 3 cr.

779. Public Policy and Regionalism
3 cr. (Not offered in 1965-1966.)

797, 798. Seminar in Government
A selected current topic from government, political philosophy and his-
tory, political behavior, public law, public administration, or international
relations. Each student is held responsible for a specific phase of the se-
lected problem. He will also, through the techniques of the seminar, acquaint
himself with the whole project. Restricted to undergraduates with honor
grades and graduate students in Social Science. Advance copies of the
syllabus may be secured from the Department Chairman. Permission of
the instructor is required. Mr. Holden, Mr. Dishman, Mr. Jaffe, Mr. Ford,
Mr. Howard, and Mr. Wurzburg. 3 cr.

Reading and Research in Government and Political Science
With the advice and consent of the instructor, graduate stu-
dents in social science who demonstrate the ability to do in-
dependent work may register for the following reading and re-
search courses. The student will attend the regular lectures,
meet the required examinations, follow a prescribed reading
program, and write a paper in lieu of a final examination. 3 cr.

817. Continental European Political Parties
Mr. Wurzburg. 3 cr.

826. Pressure Groups and the Governmental Process
Mr. Ford. 3 cr. (Not offered in 1965-1966.)

831. The Administrative Process
Mr. Howard. 3 cr.

832. Comparative Administration
3 cr.

833. American National, State, and Local Administration
This generally follows Gov. 831, The Administrative Process, and deals
with various specialized aspects of administrative practice in the United
States, including policy formation in administrative settings, rule making, administrative adjudication, and policy control. Mr. Howard and others. 3 cr.

834. Administrative Decision-Making
3 cr.

841. Administration of Justice
Mr. Dishman. 3 cr.

842. The Supreme Court and the American Constitution
Mr. Dishman. 3 cr.

845. World Politics
Mr. Holden. 3 cr.

846. Foreign Policies of the Great Powers
Mr. Holden. 3 cr.

851. Contemporary Southeast Asia
Mr. Holden. 3 cr.

852. Governments of Emerging Countries
3 cr. (Not offered in 1965-1966.)

854. Governments of Latin America
3 cr. (Not offered in 1965-1966.)

863. Political Thought in the West
Mr. Jaffe. 3 cr.

864. Modern Political Thought
Mr. Jaffe. 3 cr.

865. Contemporary Political Theory
Mr. Jaffe. 3 cr.

879. Public Policy and Regionalism
3 cr. (Not offered in 1965-1966.)

897, 898. Seminar in Government
Mr. Holden, Mr. Dishman, Mr. Jaffe, Mr. Ford, Mr. Howard, and Mr. Wurzburg. 3 cr.

899. Master's Thesis
6-9 cr.

History (53)
William R. Jones, Chairman

In general, the candidate for admission to graduate study in history should present evidence of having satisfactorily completed at least 24 semester credits as an undergraduate in courses in history, not including courses open to freshmen, with a grade of C or better. The History Department, however, reserves the right to judge each applicant on his individual merits. The re-
requirements for the degree of Master of Arts in History are those on pages 22 to 24 of this catalogue. The completed thesis must be submitted by April 1 of the year in which the degree is to be granted. A final examination is not required.

707, 708. Colonial and Revolutionary American History
Colonial beginnings in America, national rivalries, the English colonies, the Revolution, and our national life to 1789. Early forms of Americanism in the making. Mr. Marston. 3 cr.

711, 712. Nineteenth Century America
The historical factors, both domestic and international, involved in the development of the American Republic, its institutions and people, from the inception of the new nation in 1789 to the emergence of the United States as a world power in 1900. Mr. Jellison. 3 cr.

715, 716. Twentieth Century America
United States history since 1896, from the triumph of industrialism on the national scene to the emergence of America as a world power in the nuclear age. Political, economic, and diplomatic developments. Mr. Greenleaf. 3 cr.

719, 720. The Foreign Relations of the United States
Primarily the history of American diplomacy, with attention given to the non-diplomatic aspects of foreign relations. Mr. Long. 3 cr.

739, 740. Three Medieval Civilizations
A study of the demise of classical antiquity in the lands bordering the Mediterranean and the genesis and fruition of three new cultural traditions: the Latin Christian, the Islamic, and the Byzantine. Stress will be put on religious, literary and scholarly survivals and innovations from 400 A.D. to 1400 A.D. Mr. Jones. 3 cr.

743. Renaissance and Reformation
The history of Europe during the fifteenth and sixteenth centuries with primary emphasis on the Italian Renaissance, the Protestant Reformation, and the emergence of the national state. 3 cr.

747. The Age of Absolutism
The theory and practice of absolutism from its origin in the seventeenth century to its apogee in enlightened despotism. Mr. Isherwood. 3 cr.

749. The Age of Revolution
Revolution as a socio-political phenomenon in its historical setting. Comparative approach to Puritan, American, and French revolutions with reference to contemporary movements. Mr. Gilmore. 3 cr.

756. Twentieth Century Europe
European history in the twentieth century will be treated from the point of view of a civilization in a constant state of crisis. World War I, the interwar period, World War II, and the attempts to solve the conflicts of modern society after that war in terms of new economic, political, and cultural patterns will represent the core of the study. The effects of extra-European influences, the loss of European primacy, and continued strife within the structure of the European state and cultural system. Mr. Heilbronner. 3 cr.
763, 764. History of Russia

The development of the Russian state from its foundation to its present status as a world power. The course is designed to increase the understanding of the present in terms of the past. Political developments, foreign relations, and intellectual and ideological currents. Mr. Heilbronnner. 3 cr.

774. European Historiography

An examination of selected works of historical literature since the Reformation. Emphasis will be placed on the comparison of different schools of historical interpretation, the development of historical method, and the impact of Romanticism, Idealism, Nationalism, and Positivism on the composition of historical literature. Mr. Isherwood. 3 cr.

781. History of Modern China, 1850-1950

A study of the struggles of a great Asian nation to modernize. Political, social, and cultural developments, the internal and external factors in the decline of the Chinese Empire, efforts to transplant western political institutions to China, the westernization of China's intellectuals, the growth of the Kuomintang and of the Chinese Communist Party, and the impact of World War II. Mr. Linden. 3 cr.

(789). Seminar in the History of Science

Selected topics, conducted through special lectures, individual study, oral, and written reports. The subject will vary from year to year. This course is the same as Phys. Sci. (789). Mr. Schneer. Cannot be used for credit in History without permission of the History Department. Prereq.: Permission of adviser and instructor. 3 cr.

791. History-Education (Hist-Ed). Problems in the Teaching of High School History and Other Social Studies

Bibliography and new interpretations of history; the social studies curriculum, past and present; aims and objectives in the social studies; selection and organization of teaching material; teaching and testing techniques. Special emphasis on teaching American history and the problems of American democracy. Open to students who have satisfactorily completed Hist. 503, 504; six credits in other history courses, exclusive of Hist. 401, 402; six credits from American Government, Principles of Economics, or Principles of Sociology; and Principles and Problems of Teaching in the Secondary School. 3 cr.

807, 808. Sources for the Study of Colonial American History

For students who have taken Colonial and Revolutionary American History or the equivalent. Training in the methods of historical investigation and in the use of sources in the field of colonial American history. The preparation of papers based on source materials alone. Mr. Marston. Prereq.: Permission of the instructor. 3 cr.

811, 812. Seminar in Nineteenth Century American History

For students interested in examining in depth certain significant conditions, trends, and aspects of American society during the nineteenth century. Mr. Jellison. Prereq.: A course in United States history and the permission of the instructor. 3 cr.

815, 816. Seminar in Twentieth Century American History

A specialized and analytical study of movements, institutions, personalities, and problems which have played a shaping role in the development
of the United States between 1896 and the middle of the twentieth century. Research papers pertinent to seminar discussions will be required. Mr. Greenleaf. Prereq.: A course in United States history and the permission of the instructor. 3 cr.

835, 836. SEMINAR IN MODERN EUROPEAN HISTORY

Specialization in the study of the development of some major institutions and ideas which contributed to the structure and spirit of modern society. Research papers, relating to seminar discussions, will be required. Mr. Gilmore. Prereq.: A course in modern European history and permission of the instructor. 3 cr.

863, 864. SEMINAR IN RUSSIAN HISTORY

The seminar will be concerned with the study of and research in specific, limited topics in nineteenth and twentieth century Imperial and Soviet history. Mr. Heilbronner. Prereq.: A course in Russian history and permission of the instructor. 3 cr.

895, 896. READING AND RESEARCH IN HISTORY

For independent study in an area in which no appropriate course is offered. To be chosen by a graduate student in history who wishes to take courses normally not open to him on a graduate basis. Hours to be arranged. Prereq.: Permission of the instructor. 3 cr.

399. MASTER'S THESIS

6 cr.

Home Economics (31)

Marjory Wybourn, Chairman

Graduate work is offered leading to the degree of Master of Science in Home Economics with major emphasis in areas which strengthen professional competence in family, community, and educational services.

Each student's program will be planned to achieve personal and professional objectives of the individual and will be based on specific interests, ability, and undergraduate preparation. Selection of courses from the social sciences and other University departments will be encouraged.

Students admitted to the graduate program in Home Economics are expected to have had an undergraduate degree in Home Economics or a related field. If there are deficiencies in the undergraduate program students may be admitted on condition that they complete specified prerequisites.
A candidate for a Master of Science degree in Home Economics is expected to fulfill the general requirements of the Graduate School and the following departmental requirements:

1. Home Economics — a minimum of 12 semester credits, including one course in each of the following two areas: management and decision-making in the family and family development.

2. A minimum of 9 semester credits selected from the liberal arts or other areas which support the major.

757, (757). Home Management
The management of individual and family resources as related to human needs, values, and goals throughout the life cycle of the family. 3 cr.

765. History of Costume
A broad historical survey of western world costume from primitive times to the present. The influence of social, religious, and political conditions of the eras studied to costume evolution. 3 cr.

768. Socio-Psychological Aspects of Clothing
The analysis of research and theory in the social psychological aspects of clothing. An exploration and study of clothing behavior of individuals and groups. 3 cr.

769. Advanced Textiles
Investigation and evaluation of fabrics in everyday use. Consumption of textiles with emphasis on economic and social implications. Prereq.: H.E. 404 or equivalent. 3 cr.

771. Experimental Foods
Application of the experimental method of study to the principles underlying food preparation. Includes lab and individual problem study. Prereq.: H.S. 418. 3 cr.

778. Food and Nutrition Trends and Developments
Investigation and evaluation of current problems in food production, preparation and preservation or of current nutritional developments. The course may be carried as an independent directed study. 3 cr.

783. Family Relationships
A study of husband-wife, parent-child, and sibling interactions throughout the family life cycle. 3 cr.

791. Methods in Home Economics Education
Home economics education in the school program, curriculum materials, methods, and resources in teaching home economics. 3 cr.
(792). Methods in Family Relations Education
A study of the methods and materials used in family relations education in high schools, colleges, churches and social agencies. 2-4 cr.

795, (795). Projects in Child Development
Discussion, conferences, and supplementary projects based upon special interests of the student. Work with children in the University Nursery School or in other situations. Prereq.: H.E. 426 and permission of the instructor. 1-3 cr. each semester; maximum 6 cr.

796, (796). Projects in Home Management
The student, under the guidance of the instructor, will undertake selected areas of study in the field of Home Management. Such investigations may include: (a) family finance, (b) consumer education, (c) management processes, (d) current research. 1-3 cr. each semester. Maximum of 6 cr.

797. Nutrition Seminar
Theoretical approach to nutrient metabolism. Critical review of literature in the field of nutrition relative to the principles on which human nutrition is based. Prereq.: H.E. 573. 3 cr.

(798), 798. Seminar in Home Economics Education
Recent developments and problems in teaching home economics at all levels. Individuals or small groups may work on specific problems in the field. 2 to 4 cr.

883. The Adolescent in the Family
A study of the psycho-social development of the adolescent with attention given to the heterosexual and familial relationships of the adolescent. 3 cr.

895, (895). Projects in Food and Nutrition
The student, under the guidance of the instructor, may select a study, creative project, or field experience for independent work in the area of food and nutrition. 1-3 cr. each semester; maximum of 6 cr.

(896), 896. Projects in Clothing and Textiles
The student, under the guidance of the instructor, may undertake selected areas of investigation in the field of clothing and textiles. Such investigations may include: (a) philosophy of textiles and clothing in education, (b) current development of textiles, (c) the textile industry, (d) social and psychological interpretation of dress, (e) current research readings in clothing and textiles. 1-3 cr. each semester; maximum of 6 cr.

897. Review of Research
Survey, evaluation, and use of research in the field of Home Economics. An introduction to methods and techniques used in defining a problem for study, collecting data, analyzing, and writing a report. 2 cr.

(898), 898. Research Project
A study or project which may be selected in lieu of a thesis. To be taken concurrently with H.E. 897. 2-4 cr.

899. Thesis
6 cr.
Horticulture
(See Plant Science)

Mathematics (84)
M. Evans Munroe, Chairman

The Mathematics Department offers courses leading to three graduate degrees: Master of Science for Teachers, Master of Science, and Doctor of Philosophy.

Master of Science for Teachers

Admission requirements: Completion of all requirements for secondary school teacher certification in Mathematics.

Degree requirements: (1) Ten semester courses approved by the Department. These will normally be taken from the courses numbered 801-829 and will usually include the six courses numbered 803-808. (2) A comprehensive examination based primarily on material in courses 803-808.

Master of Science

Admission requirements: Mathematics 761-762 or 767-768 or the equivalent of one of these sequences elsewhere. Preference will be given to applicants who have completed both these sequences.

Degree requirements: (1) Ten semester courses approved by the Department. These must be chosen from courses numbered 701-799 or 830-899. At least six of the ten must be from the 830-899 group. (2) A comprehensive examination based primarily on material in the courses taken.

Doctor of Philosophy

Admission requirements: Same as for M.S.

Degree requirements: (1) Course work as prescribed by the Department. This will normally include all the courses numbered 830-840 together with several courses numbered 860-898. (2) Proficiency in reading mathematical literature in two of the three languages: French, German, and Russian. (3) Experience in teaching equivalent to at least one-half time for one year. (4) Qualifying examination. This will test the candidate's knowledge of advanced mathematics generally and, unlike the comprehensive examinations for Master's degrees, will not necessarily be confined to the subject matter taken. (5) Thesis. This
is the principal item in the Ph.D. program. New and original results will be required. At present, thesis work is available in the fields of algebra, functional analysis, and topology only.

Courses numbered between 600 and 699 may be taken for graduate credit by non-majors only.

601-602. Foundations of the Number System
Postulates and mathematical structures. Various mathematical systems showing the nature and significance of the fundamental principles of arithmetic. Intended primarily for elementary school teachers. Prereq.: Consent of instructor. 3 cr.

629. Methods of Applied Mathematics I
Solutions of ordinary differential equations by D-operators, Laplace Transforms, and by series; representation of functions by definite integrals (Gamma, Beta, and error functions); Bessel functions; Fourier Series. Prereq.: Math. 527. 3 rec.; 4 cr.

630. Methods of Applied Mathematics II
Vector analysis (line, surface, and volume integrals); elementary variational techniques; development of some partial differential equations by Laplace transforms and by Green’s functions. Prereq.: Math. 629. 3 rec.; 4 cr.

653-654. Methods and Techniques of Modern Computation
Methods of numerical analysis which are believed to be particularly suitable for high-speed computation, including some newly developed methods. Methods for making analytical approximations. An introduction to programming techniques, assembly and compiler programs, interpretive systems and symbolic operations. In the laboratory portion of the course, the practical aspects of modern computation, such as loss of precision, round-off error, overflow and underflow, etc., will be illustrated by means of short problems on both the desk calculator and the digital computer in the UNH Computation Center. A long-range project for investigation on the computer will be assigned. Prereq.: Math. 527. 3 rec.; 1 lab.; 4 cr.

A maximum of four of the following courses may be applied to the degree of M.S. in Mathematics.

741. Mathematical Statistics I
Sampling theory; estimation of parameters; the multivariate normal distribution. Prereq.: Math. 542. 3 cr.

742. Mathematical Statistics II
Testing statistical hypotheses; confidence intervals; regression and correlation; nonparametric methods, and other topics. Prereq.: Math. 741. 3 cr.

755. Fundamental Concepts of Geometry
Systems of postulates of various geometries; geometric invariants; synthetic and analytic projective geometry; introduction to non-Euclidean geometry, topology, and the elementary differential geometry of curves and surfaces. Prereq.: Math. 426. 3 cr.
Topics in Number Theory
Elementary properties of integers; the Euclidean algorithm; divisibility; diophantine equations of the second degree; selected topics in diophantine approximation and number-theoretic functions. Prereq.: Math. 531. 3 cr.

Higher Algebra I
The integers; the rational and complex number systems; congruences; polynomials; groups; rings; integral domains; fields. Prereq.: Math. 531. 3 cr.

Higher Algebra II
Vector spaces and transformations; matrices and determinants. Prereq.: Math. 531. 3 cr.

Real Analysis I
The real number system; elements of set theory; theory of limits; continuous functions and their properties; differentiability and the mean value theorem. Prereq.: Math. 531. 3 cr.

Real Analysis II
The Riemann integral; uniform convergence; double and iterated limits; applications of double limit theorem to series, limits under the integral sign and existence theorems for differential equations. Prereq.: Math. 531. 3 cr.

Group Theory and Principal Ideal Domains
Finite groups and their applications; Galois theory; Sylow theorems; structure of principal ideal domains with applications to elementary divisor theory; unique factorization domains. Prereq.: Math. 761. 3 cr.

Theory of Approximation
The theorems of Weierstrass on approximation of continuous functions; the Tschebycheff approximation problem; Tschebycheff polynomials; trigonometric polynomials of best approximation; interpolation; the formulas of Lagrange and Newton; trigonometric interpolation. Prereq.: Math. 426. 3 cr.

Nonlinear Differential Equations
Phase plane analysis of lineal systems and nonlinear conservative systems; stability theorems; limit cycles and periodic solutions; the Van der Pol equation; the method of Kryloff and Bogoliouboff. Prereq.: Math. 527. 3 cr.

Introduction to Differential Geometry
A first course in the metric differential geometry of curves and surfaces in Euclidean space. Prereq.: Math. 527. 3 cr.

Introduction to Topology
Elementary point-set topology in metric and topological spaces, in particular the real line and plane. Prereq.: Math. 531. 3 cr.

Introduction to Theory of Differential Equations
Existence and uniqueness theorems for ordinary differential equations; theory of linear ordinary differential equations of order n; oscillation and comparison theorems for second order linear ordinary differential equations; partial differential equations of the second order. Prereq.: Math. 531. 3 cr.
Complex Analysis
The complex number system; analyticity; elementary functions; Cauchy integral theorem and formulas; Taylor and Laurent series; singularities and residues; conformal mapping. Prereq.: Math. 531. 3 cr.

The following courses may be applied to the degree of M.S.T. in Mathematics and to no other graduate degree, in Mathematics.

801-802. Fundamental Concepts of Mathematics for Teachers
An introduction to the most fundamental concepts of analysis, geometry, and algebra. Basic elements of set theory; a survey of the real and complex number systems; the integers and the concept of an integral domain; introduction to groups; geometrics, Euclidean and non-Euclidean; functions, sequences, and the limit concept; the derivative and the differentiation of algebraic functions. 3 cr.

803-804. Higher Algebra for Teachers
The integers, integral domains, and topics from number theory; equivalent relations and congruences; real numbers, complex numbers, and fields; polynomials; group theory; elements of matrix theory; vectors and vector spaces; rings; Boolean algebra. 3 cr.

805-806. Higher Geometry for Teachers
Systems of postulates of various geometries; geometric invariants; synthetic and analytic projective geometry; an introduction to non-Euclidean geometry and topology. 3 cr.

807-808. Higher Analysis for Teachers
The real number system; variables, functions, and limits; elements of set theory; numerical sequences and series; continuity; the derivative and the Riemann integral; maxima and minima. 3 cr.

809. Probability and Statistics for Teachers
Permutations and combinations; finite sample spaces; random variables; binomial distributions; statistical applications. 3 cr.

811. Computers and Their Uses
Computing machines and modern numerical methods. Each student will have an opportunity to make use of the University computer. 3 cr.

814. Topology for Teachers
Fundamental concepts of elementary topology; network and map problems; sets, spaces, and transformations. 3 cr.

816. Theory of Numbers for Teachers
Divisibility and primes; congruences; quadratic reciprocity; number theoretic functions; Diophantine equations; Farey fractions; algebraic numbers. 3 cr.

817. Theory of Sets and Elementary Logic
An introduction. 3 cr.
819. **The Real Number System**
A postulational approach. Brief discussion of algebraic structures. Introduction to the sequences, limits, and continuity. 3 cr.

821. **A Modern Approach to Geometry**
The foundations and development of Euclidean geometry, with emphasis on the recent School Mathematics Study Group's recommendations in the field of high school geometry. 3 cr.

825. **Internship**
Experience under the direction of a master teacher in teaching university level mathematics to superior high school students. This work will be done in the Advanced Studies Program at St. Paul's School, Concord, N. H. 6 cr.

826. **Selected Topics in Algebra**
Topics selected to supplement the teacher's previous training in algebra; to be chosen from the following: linear algebra, vector spaces, groups, rings and ideals, fields. 3 cr.

827. **Selected Topics in Geometry**
Topics selected to supplement the teacher's previous training in geometry; to be chosen from among the following: analytic projective geometry; non-Euclidean geometry; transformation theory; elementary metric differential geometry; topology. 3 cr.

828. **Selected Topics in Analysis**
Topics selected to supplement the teacher's previous training in analysis; to be chosen from among the following: sequences and series of real functions; Riemann integration; partial differentiation; complex functions; differential equations. 3 cr.

829. **Directed Reading**
A directed reading project on a selected topic in mathematics chosen to supplement the teacher's previous institute courses. A written examination will be required. 3 cr.

The following are the basic courses for both the M.S. and Ph.D. in Mathematics.

831. **Set Theory**
Foundations of the theory of sets; ordinal and cardinal numbers; Zorn's lemma; applications. 3 cr.

833-834. **Algebra**
Groups; theory of rings and ideals; fields and their transcendental and algebraic extensions; valuation theory; Galois theory; algebraic numbers. 3 cr.

835-836. **Real Analysis**
The theory of measure as developed by Lebesgue, Caratheodory, and others; the definitions and basic properties of the Lebesgue integral. Related topics will be considered with the choice varying from year to year. Sample supplementary topics; foundations of probability theory, Fourier series, Banach spaces, topological groups and Haar measure, the Daniell integral. 3 cr.
837-838. Complex Analysis
Complex numbers; analytic functions; complex integration; representation theorems; theory of residues. 3 cr.

839-840. Topology
General topology. 3 cr.

848. Geometry
Metric differential geometry of curves and surfaces in Euclidean spaces; tensor analysis; Riemannian geometry. 3 cr.

851-852. Differential Equations
Ordinary differential equations; existence theory; linear equations; Sturm-Liouville theory; nonlinear autonomous systems; Poincare-Bendixson theory; partial differential equations; second order linear equations; initial value problems; hyperbolic equations; the Dirichlet problem. 3 cr.

855-856. Applied Mathematics
Calculus of variations, integral equations; operator theory; distributions; Hilbert spaces. 3 cr.

The following are advanced courses primarily for Ph.D. candidates, though they may be elected by qualified M.S. candidates. In each of these the content will vary from year to year. Thus, with the consent of the instructor, each of these courses may be taken more than once for credit, even concurrently. Normally, the content will be chosen from among the topics listed.

861, 862. Topics in Algebra
Algebraic number theory; algebraic geometry; ring theory; theory of modules; group theory; non-associative algebras. 3 cr.

863, 864. Topics in Analysis
Measure theory; calculus of variations; integral equations; boundary value problems; orthogonal series; theory of approximation; analytic number theory; Riemann surfaces. 3 cr.

865, 866. Topics in Topology
Algebraic topology; theory of sheaves; dimension theory; Riemann surfaces; homotopy theory. 3 cr.

867, 868. Topics in Geometry
Convexity; projective geometry; differential geometry; tensor analysis. 3 cr.

869, 870. Topics in Topological and Algebraic Analysis
Rings of functions; linear topological spaces; topological algebras; Hilbert spaces; rings of operators; topological groups; Lie groups: harmonic analysis. 3 cr.
871, 872. Topics in Differential Equations

Boundary value problems; asymptotic behavior and stability theory; non-linear equations; dynamic systems; classical theory of partial differential equations; functional analysis and partial differential equations. 3 cr.

873, 874. Topics in Applied Mathematics

Linear and dynamic programming; differential equations; special functions. 3 cr.

875, 876. Topics in Probability and Statistics

Stochastic processes. 3 cr.

898. Reading Courses

999. Ph.D. Thesis

Mechanical Engineering (85)

Robert W. Corell, Chairman
Douglas M. Norris, Jr., Graduate Adviser

The Mechanical Engineering Department offers specialization in materials, thermodynamics, and applied mechanics leading to the degree of Master of Science in Mechanical Engineering. The program provides the background required for careers in research and development or teaching, or for further graduate study.

To be admitted to graduate study in Mechanical Engineering a student should have completed work equivalent to that required for a Bachelor of Science degree in his field at the University of New Hampshire.

A candidate for the degree of Master of Science shall be required to prepare and present an approved thesis unless excused by the Department. An oral examination covering the candidate's graduate work will be given whether or not a thesis is presented. If excused from the thesis requirement, the student must present a paper, the subject and scope of which shall be approved by his adviser.

Courses numbered between 600 and 699 may be taken for graduate credit by non-majors only.

Permission of the instructor and consent of the advisor is required for enrollment in all Mechanical Engineering graduate courses.
643. **Machine Design and Analysis**
Analysis and design of mechanical elements and systems; utilization and further development of the fundamentals of strength of materials and dynamics. 3 cr.

644. **Mechanical Vibrations**
Theory of vibratory motion applied to the analysis of discrete mechanical systems. 3 cr.

653. **Heat Transfer**
Analysis of heat transfer phenomena; steady-state and transient conduction, radiation, and convection; engineering applications. 3 cr.

657-658. **Heat and Power Systems**
The application of thermodynamics, fluid mechanics, combustion, heat transfer, and other engineering sciences to the design and evaluation of heat and power systems. 2 lec.; 1 lab.; 3 cr.

663. **Materials II**
Theoretical and experimental application of the theory of elasticity, dislocation theory, and fracture mechanics to the determination of physical design parameters of crystalline and amorphous solids. 2 lec.; 1 lab.; 3 cr.

664. **X-ray Metallography**
Theoretical and experimental studies of x-ray diffraction and microradiography. Prereq.: Math 301 and consent of instructor. 3 cr.

671. **Naval Architecture I**
Introduction to naval architecture; geometry and hull form delineation; hydrostatic characteristics of floating and submerged bodies; introduction to ship strength; computer applications to problems. 3 cr.

701. **Thermodynamics I**
An introduction to statistical thermodynamics. 3 cr.

727. **Advanced Strength of Materials**
Energy methods; beams on elastic foundation; bending and buckling of thin plates; membrane stresses in shells; numerical methods. Prereq.: Math. 629. 3 cr.

729. **Kinematics**
The vector equations of relative motions are used to analyze mechanisms of varying complexity; graphical and analytical methods are used to analyze space linkages. 1 lec.; 2 labs.; 3 cr.

751. **Gas Dynamics**

755. **Internal Combustion Engines**
Application of basic and engineering science to the engineering problems of spark and compression ignition engines; design, management, and reporting of experimental studies. 2 lec.; 1 lab.; 3 cr.
756. TURBOMACHINERY
Application of basic and engineering sciences to the engineering problems of turbomachinery; design, management, and reporting of experimental studies. 2 lec.; 1 lab.; 3 cr.

772. NAVAL ARCHITECTURE II
Hydrodynamic resistances of surface ships and submerged bodies; model testing theory; powering and propellers; use of “Standard Series” tests; introduction to ship motion, control steering, and rudders; concepts of ship design; computer application to problems. 3 cr.

802. THERMODYNAMICS II
Theoretical study of the behavior of multiphase thermodynamic systems undergoing physical and chemical change; application to equilibrium and non-equilibrium processes. Prereq.: M.E. 701 or consent of instructor. 3 cr.

803. ADVANCED HEAT TRANSFER
The heat flux vector, conduction equation in several variables with solutions by various techniques. Fluid and thermal boundary layer theory. Heat transfer with phase changes. 3 cr.

808. THEORETICAL FLUID MECHANICS
Mathematical development of the basic equations of fluid flow; potential flow; viscous flow. Prereq.: Math. 630. 3 cr.

810. COMPRESSIBLE FLUID FLOW
Equations of motion for real compressible fluid flow; theorems of vorticity and circulation; non-steady and nonlinear flow problems; boundary layer effects. Prereq.: M.E. 751, Math. 630. 3 cr.

812. DYNAMIC SYSTEMS ANALYSIS
Linear and non-linear systems; undamped, damped and forced damped systems; electro-mechanical systems and analogies; tabular methods. Prereq.: M.E. 644. 3 cr.

820. PHYSICAL METALLURGY
Introduction to the electron theory of materials; entropy and free energy concepts of the solid state; diffusion in metals; nature and kinetics of selected solid-state reactions. 3 cr.

825. MECHANICS OF A CONTINUOUS MEDIUM
Analysis of three dimensional stress, strain, and velocity strain; tensor methods; equilibrium, compatibility, and constitutive equations of solids and fluids. Prereq.: Math 629. 3 cr.

826. THEORY OF ELASTICITY AND PLASTICITY
Two dimensional problems using Airy stress function; torsion, finite difference, energy, and variational methods; introduction to plasticity. Prereq.: M.E. 825. 3 cr.

891. TOPICS IN APPLIED MECHANICS
Content of course may vary from year to year. 3 cr.

892. TOPICS IN THERMODYNAMICS
Content of course may vary from year to year. 3 cr.
893. **Topics in Materials**  
Content of course may vary from year to year. 3 cr.

895-896. **Graduate Independent Study**  
Investigation of graduate level problems or areas germane to mechanical engineering. 1-3 cr.

899. **Master's Thesis**  
6-8 cr.

**Microbiology (47)**  
Lawrence W. Slanetz, *Chairman*

Students admitted to graduate study in Microbiology are expected to have had adequate preparation in the biological and physical sciences and in the basic courses in Microbiology. The candidate for the M.S. degree will be required to complete a thesis and pass an oral examination covering his graduate courses and thesis.

Candidates for the Ph.D. degree must demonstrate proficiency in reading microbiological literature in two foreign languages, usually French and German, must demonstrate to the Doctoral Committee a broad basic knowledge of the field of Microbiology, and must complete a dissertation on some original research in Microbiology.

701. **Advanced Microbiology**  
The growth, nutrition, and metabolism of microorganisms; consideration of cell structure and localization of function; aspects of genetic and non-genetic regulation of metabolism; study of the influences of chemical and physical factors of the environment upon microorganisms. Mr. Chesbro. **Prereq.**: Microb. 503. 2 lec.; 1 lab.; 4 cr.

702. **Pathogenic Microbiology**  
The morphological, cultural, biochemical, serological, and pathogenic characteristics of microorganisms causing human and animal diseases. Mr. Metcalf. **Prereq.**: Microb. 503. 2 lec.; 2 lab.; 4 cr.

705. **Immunology and Serology**  
The defensive elements possessed by man and animals which serve to protect them from infectious microorganisms. The principles of serological techniques used in the recognition and identification of biological materials including microorganisms. The preparation of vaccines and the production of antisera in animals. Mr. Metcalf. **Prereq.**: Microb. 702. 2 lec.; 2 lab.; 4 cr.

706. **Virology**  
The animal and plant viruses, including bacteriophages and the rickettsiae; a consideration of techniques for the propagation and recognition of animal viruses; a study of the interactions between virus and host cell and the application to problems of plant or animal infections caused by viruses. Mr. Metcalf. **Prereq.**: Microb. 702. 1 lec.; 3 lab.; 4 cr.
Procedures and methods for the classification of bacteria; review of modern systems of classification. Mr. Slanetz. Prereq.: One year of Microbiology. 2 lec.; 1 lab.; 3 cr.

Microbial Physiology

Microbial physiology is the study of the means by which microorganisms survive. It deals with the effects of nutritional, chemical, and physical factors on microbial growth; with the generation of activated metabolites during catabolism and the use of these metabolites for the synthesis of macromolecules; with the nongenetic mechanisms directing and regulating cellular metabolism; with the biochemical cytology of the microbial cell; and with evolutionary and ecological relationships among microbial species. Mr. Chesbro. Prereq.: Biochemistry (may not be taken concurrently) and Microb. 503. 2 lec.; 2 lab.; 4 cr.

Microbial Cytology

Microbial Genetics

An introduction to genetic principles and methodology applicable to microorganisms; fine structure of genetic material, mutation, selection, adaptation, recombination, transformation, and transduction. Mr. Hageage. Prereq.: Permission of the instructor. 2 lec.; 2 lab.; 4 cr.

Microbiology Seminar

Reports and discussions on microbiological literature and recent developments in microbiology. Mr. Slanetz and staff. Prereq.: Permission of the instructor. 1 cr.

Master's Thesis

6-10 cr.

Doctoral Research

Music (63)

Applied Music for Graduate Credit

(1) Piano; (2) Organ; (3) Violin, Viola; (4) Violoncello; (5) Voice; (6) Woodwind; (7) Brass; (8) Percussion. Further development of technique, music interpretation and repertory. Emphasis will also be directed toward the functional use of the instrument in the schoolroom. Prereq.: Must exhibit sufficient proficiency to warrant graduate study. Permission of the Department Chairman and the student's graduate supervisor. Audition required. A student may register for credit in the same courses in successive years with the approval of his major professor. Music staff. 1-2 cr.
Physics (86)
John A. Lockwood, Chairman

For admission to graduate study in Physics the candidate must have satisfactorily completed undergraduate courses in Physics totaling 24 to 30 semester hours. Suitable undergraduate work in mathematics is essential and must include courses in differential equations and advanced calculus. The aim of the program is to give the student broad general training in fundamentals. Entering students will be expected to demonstrate proficiency in undergraduate work equivalent to that of the senior year in Physics at the University of New Hampshire. A placement examination, required of entering graduate students, will be given during the fall registration period.

The following courses are required for the Master's degree: Physics 831, 833, 840, and 841.

Candidates for the Master's degree must select one of the following two options:

a. Complete 24 course credits plus a thesis for 6 credits, and pass an oral examination on the thesis.

b. Complete 30 course credits and pass an oral examination on the 6 credits of course work substituted for a thesis.

All candidates for the Master's degree are expected to demonstrate proficiency in reading literature in one foreign language: German, French, or Russian. Requirements for the M.S. degree (see page 22) and further details may be obtained from the Department.

The following courses are required for the Ph.D. degree: Physics 831, 833, 835, 839, 840, 841, 842, 861, 863, and 865.

A candidate for the Ph.D. degree will be expected to show that he has a broad, basic knowledge of the field of Physics and that he has acquired a sufficient understanding of a specialized area to begin a dissertation. To accomplish this, all candidates must demonstrate an outstanding proficiency in undergraduate physics by passing with distinction the placement examination, which may be taken twice. In the written and oral preliminary qualifying examinations, required of all candidates, the emphasis will be placed upon electromagnetic theory and quantum
mechanics. These examinations must be taken before the end of four semesters. The final qualifying examination will consist of an oral examination based upon the student's area of concentration. The Ph.D. candidates will be expected to demonstrate proficiency in two languages by passing examinations in German, Russian, or French. The language requirement must be satisfied before taking the final qualifying examination. Requirements for the Ph.D. degree and further details may be obtained from the Department.

All graduate students must register for Physics 897-898 for two years.

Courses numbered between 600 and 699 may be taken for graduate credit by non-majors only.

607. **Physical Optics**
Maxwell's equations, the nature of light, interference, diffraction, polarization, and related phenomena. (Offered on request). *Prereq.: Math. 527.* 3 cr.

701. **Introductory Quantum Mechanics**
Quantum mechanics with application to atomic physics. *Prereq.: Phys. 503 and 704.* 3 cr.

702. **Atomic and Nuclear Physics**

703-704. **Electricity and Magnetism**
Foundation of electromagnetic theory, including electrostatics, dielectric theory, electromagnetism, magnetic properties of matter, alternating currents, Maxwell's field theory, and an introduction to electrodynamics. 3 cr.

831-832. **Mathematical Physics**
Differential equations of physics, complex variables, orthogonal functions, variational methods, matrices, vector, and tensor analysis. 3 cr.

833-834. **Experimental Physics**
Modern research techniques, including discussion and laboratory exercises in fundamental measurements in optics, electromagnetism, nuclear, atomic, and molecular phenomenon. 1-3 cr.

835. **Statistical Physics I**
A review of thermodynamics and kinetic theory, followed by an introduction to statistical thermodynamics. *Prereq.: Phys. 831 or permission of the instructor.* 3 cr.

836. **Statistical Physics II**
Basic formulation and application of statistical mechanics to physical problems. *Prereq.: Phys. 840.* 3 cr. (Offered on request.)

837. **Mathematical Physics**
Formulation and solution of physical problems grouped according to their mathematical properties. *Prereq.: Phys. 831-832.* 3 cr. (Offered on request.)
839. THEORETICAL MECHANICS

Particle mechanics, including the motion of rigid bodies, elasticity, fluid dynamics, and special relativity. Topics in classical mechanics that serve as background for the study of modern physical theories. 3 cr.

840. QUANTUM MECHANICS

Non-relativistic. Basic formulation and application, development of approximation methods, and formal scattering theory. Recommended prereq.: Phys. 701 and 839. 3 cr.

841-842. ELECTROMAGNETIC THEORY

The formulation and detailed application of electromagnetic theory to physical problems. Prereq.: Phys. 831 or permission of the instructor. 3 cr. (842 offered on request.)

850. PLASMA PHYSICS I

Steady state conditions, hydromagnetic waves, turbulence, shock waves, and individual particle motion will be discussed. Prereq.: Phys. 841 or permission of the instructor. 3 cr.

861-862. ADVANCED QUANTUM MECHANICS

An extension of Phys. 840 and an introduction to relativistic theory. 3 cr.

863-864. NUCLEAR PHYSICS

Formulation of theory underlying current experiments. Prereq.: Phys. 840. 3 cr. (Offered on request.)

865-866. INTRODUCTION TO SOLID STATE PHYSICS

Development of quantum mechanical theory of solids, transport, phenomena, etc. Prereq.: Phys. 840 and 835. 3 cr. (Offered on request.)

889-890. SPACE PHYSICS SEMINAR

Lectures and discussions of current research in the physics of fields and particles in space. 1-3 cr.

891, 892. PROBLEMS IN THEORETICAL PHYSICS

May be taken more than once. 3 cr. (Offered on request.)

893, 894. PROBLEMS IN EXPERIMENTAL PHYSICS

May be taken more than once. 3 cr. (Offered on request.)

895, 896. SPECIAL TOPICS

Any special fields of study not covered by the above courses may be included. Choice of topic to be determined by class. 1-3 cr. May be taken more than once.

897-898. COLLOQUIUM

Required of all graduate students. Topics to be selected. No credit.

899. MASTER'S THESIS

6 cr.

999. DOCTORAL RESEARCH
The graduate research program in Plant Science is concerned with solving basic and applied problems associated with production of horticultural or agronomic crops. Facilities include laboratories, field and greenhouse research areas, and plant growth chambers.

Program emphasis is directed toward breeding and genetics and toward crop physiology or biochemistry. Research and teaching in plant genetics, cytogenetics, and plant breeding is a major strength and is complemented by expanding University programs in statistics and in biochemical and microbial genetics. (See description of Genetics Program.) Increased emphasis also is being given to research in plant metabolism, mineral nutrition, and growth and development. In certain instances, these research areas are integrated with the genetics projects to provide unique approaches toward solving agricultural problems.

It is recommended that all graduate students first complete work for the M.S. degree. Candidates for this degree will be required to pass an oral examination and will usually be required to prepare a thesis. Candidates for the Ph.D. degree, (offered only in Horticulture), in addition to the general requirements, must also demonstrate a reading knowledge of two foreign languages and complete a thesis on original research. One or two minors may be required of Ph.D. candidates in fields closely related to the student’s area of specialization.

704. ANNUAL CROPS

A study of annual grains, silage crops, and potatoes and their characteristics of growth as affected by culture and management. Mr. Higgins. 2 lec.; 1 lab.; 3 cr. (Alternate years; offered in 1966.)

706. PASTURE-HAY CROPS

A survey of the important forage and pasture crops, their characteristics of growth, culture, and management. Mr. Higgins. Prereq.: Bot. 411, Pl. Sci. 402. 3 lec.; 1 lab.; 4 cr. (Alternate years; offered in 1967.)

708. NUTRITION AND WATER RELATIONS

Mineral requirements of plants and response to deficiencies. Effect of soil and atmospheric environments on plant growth and differentiation of plant parts. Mr. Eggert. Prereq.: 3 cr. Plant Physiology. 2 lec.; 1 lab.; 3 cr. (Not offered in 1966.)

753. FRUIT CROPS

The growth and management of tree and small fruit crops. Pest control, storage, marketing and response to pruning and grafting. Mr. Eggert. Pre-
764. Vegetable Crops

Systematic classification of vegetable crops, their use, management, and response to environment and competition in food and seed production. Mr. Peirce. Prereq.: Bot. 411, Pl. Sci. 406 or equivalent. 3 lec., field trips, 3 cr. (Alternate years; offered in 1966.)

765. Systematic Pomology

Taxonomic relationships and group characteristics among varieties of tree and small fruits. Mr. Eggert. Prereq.: 6-8 cr. Bot. 1 lec.; 1 lab.; 2 cr. (Alternate years; offered in 1967.)

768. Plant Growth and Development

Biochemical and physiological aspects of crop production. Bases for changes in growth or development of plants effected by environment or treatments. Mr. Eggert. Prereq.: Chem. 545, Bot. 756 or equivalent. 3 cr. (Alternate years; offered in 1966.)

774. Methods and Theory of Plant Breeding

History and use of plant breeding systems, including bulk and pedigree methods, recurrent selection, gamete selection and testing. Mr. Peirce. Prereq.: 3 cr. in genetics. 3 cr. (Alternate years; offered in 1966.)

795-796. Investigations in Plant Science

Selected topics for crop or library research. Prereq.: Permission of instructor. 1-4 cr.

1. Plant Growth and Development: Messrs. Eggert, Routley
2. Breeding and Genetics: Messrs. Dunn, Peirce, Rogers
3. Crop Production and Management: Messrs. Higgins, Eggert, Peirce
4. Ornamentals and turfgrass: Messrs. Higgins, Rogers

851. Plant Genetics

Linkage, polyploidy, aneuploidy, cytoplasmic inheritance, mutation and complex loci. Mr. Dunn. Prereq.: Zool. 706. 3 cr. (Alternate years; offered in 1965-1966.)

853. Cytogenetics

Chromosome aberrations and their behavior. Effect of radiation on chromosomes. Mapping and laboratory technique in cytogenetic analysis. Mr. Rogers. 2 lec.; 1 lab.; 3 cr. (Alternate years; offered in 1965-1966.)

895-896. Research in Plant Science

Selected topics involving library study and greenhouse, growth chamber or field research. 1-4 cr.

1. Growth and Development: Messrs. Eggert, Routley
2. Breeding and Genetics: Messrs. Dunn, Peirce, Rogers
3. Crop Production and Management: Messrs. Higgins, Eggert, Peirce
4. Ornamentals and Turfgrass: Messrs. Higgins, Rogers

897-898. Graduate Seminar

Library research in current topics of Plant Science. Practice in presentation of reports. Required of all graduate students majoring in Plant Science and open to related departments. Staff. 1 cr.
M.S. Thesis
A thesis study of some phase of Plant Science is usually required of candidates for an advanced degree. 6-10 cr.

Ph.D. Thesis
Candidates must complete a thesis on original research in Plant Science.

Psychology (67)
Eugene S. Mills, Chairman

The Department has as the major objective of its graduate curriculum the provision of a program which enables the student to advance his scholarly and scientific interests in psychology. With this as background, the student may wish to undertake further advanced study beyond the Master of Arts degree.

Each student is expected to become competent in the general field of psychology. In addition, however, the student is encouraged to pursue the interests which develop during his graduate study through independent work. This can be done by registering for Psych. 872, Graduate Practicum, Psych. 895, 896, Reading and Research in Psychology, or Psych. 899, Thesis; or by electing other courses in areas of special interest. The courses taken will be selected by the student and his supervisor on the basis of his interests, academic or professional goals, and courses taken earlier. Departments such as Zoology, Philosophy, Sociology, Economics, or Education may be drawn upon for related course material.

In addition to meeting the requirements for entrance into the Graduate School, students admitted to graduate study in psychology must have had a minimum of 15 credits in undergraduate courses in Psychology. It is highly desirable that these credits include courses in experimental psychology and elementary statistics.

The student must submit Graduate Record Examination scores in applying for admission to the department's program. Upon consultation with the student's supervisor and the prospective director of the thesis, a student may elect to submit a thesis in partial fulfillment of the requirements for the Master's degree. The minimum number of thesis credits will be six. An oral examination is required of all those who write a thesis.

A comprehensive written examination is required of all candidates for the Master of Arts degree. An oral examination may be required of those who do not write a thesis.
757. Experimental Psychology
Discussion of theory and practices in applying experimental methods to a variety of psychological phenomena. Each student in the class will be responsible for an individual experimental project. Mr. Haslerud, Mr. Erickson and Mr. Duryea. Prereq.: Psych. 667. 2 lec.; 1 lab.; 3 cr.

758. Psychology of Learning
The experimental support for contemporary theories of learning and their practical implications. Mr. Haslerud. Prereq.: Psych. 402. 3 cr.

760. Psychology of Motivation
The drives and motives which underlie normal human behavior and the forms of adjustment which arise when motives conflict or encounter external frustration. Mr. Rutledge. Prereq.: Psych. 402. 3 cr.

776. Comparative Psychology
Similarities and differences in behavior of infrahuman organisms at different phylogenetic levels as aids to understanding how behavior evolved and to the clarification of behavior principles. The historical and biological foundations of such special topics as instinct, consciousness, abnormal behavior, social influence, reasoning, and judgment are surveyed by use of the comparative method. Mr. Duryea. Prereq.: Psych. 402. 3 cr.

778. Physiological Psychology
The relation between behavior and the structure of the organism. Special attention to the sensory, nervous, and glandular functions as the organic base for motivation, emotion, learning, etc. Mr. Rutledge. Prereq.: Psych. 402. 3 cr.

782. Social Psychology of Industry
The exploration of social structure and function of industrial organizations. Leadership, role and organization theories, and a critical evaluation of their supporting experimental evidence. Mr. Kay. Prereq.: Psych. 402. 3 cr.

783. Systematic Psychology
The complex expansion of contemporary psychology as seen in historical perspective. Some of the major antecedents in philosophy, theology, and the physical sciences. The subsequent extensive development of psychology in the United States in the form of complementary schools and systems of thought and research. Prereq.: Psych. 402. 3 cr.

789, (789). Special Topics in Psychology
Taught by a different instructor each year. The course will present advanced material in an area in which the instructor has developed specialized knowledge through research and special study. Students may repeat the course but they may not duplicate areas. Instruction may be given in any one of the following: (1) Clinical, (2) Developmental, (3) Differential, (4) Experimental, (5) Industrial, (6) Learning and Perception, (7) Personality, (8) Physiological, (9) Psychological Evaluation, (10) Psychopathology, (11) Statistics, (12) Systematic. Prereq.: 12 semester credits in Psychology and permission of instructor. 3 cr.

805-806. Introduction to Counseling and Psychotherapy
Basic psychological issues are examined to identify similarities and differences among schools of psychotherapy. The components of psychothera-
apy in terms of theory and empirical research. The development of a theoretical construct for counseling. During the second semester the aims of the course are: (a) to develop an appreciation of the complexities of human behavior; (b) to understand better the difficulties in applying theoretical knowledge to the counseling situation. Case material and role playing will be employed to acquaint the student with the interaction which takes place between the counselor and the client. Mr. Jervis. 3 cr.

808. Case Studies in Counseling
Actual cases are used to reflect a variety of personality theories and counseling techniques. A detailed examination will be made of two individuals in the counseling processes. Other cases will be considered more briefly to explore the interaction of counselor and counselee. Designed to develop an appreciation of the complexities of human behavior, to gain increased respect for the integrity of individuals and their difficulties in revealing themselves to a counselor, and to understand better the difficulties in applying theoretical knowledge to the counseling situation. 3 cr. (Offered only in summer.)

814. Advanced Statistics and Experimental Design
Practice in the set-up of parametric and non-parametric statistical problems commonly found in the current literature of experimental, clinical, and industrial psychology. Understanding the assumptions of the various procedures. Mr. Erickson. Prereq.: Psych. 667 or its equivalent. 3 cr.

823. Individual Testing
To train students in the administration, scoring, and interpretation of individual tests for the appraisal of intelligence. Such instruments as the Wechsler Adult Intelligence Scale, the Stanford-Binet, and the Wechsler Intelligence Scale for Children will be critically analyzed. Students will be required to purchase one set of test materials. Miss Riggs. Prereq.: 15 credits in Psychology or the equivalent in related fields. 1 lec.; 1 lab.; 4 cr.

831. Research Methodology
The research process as the attempt to discover answers to meaningful questions through the application of scientific procedures. The relation of theory to research, experimental design, problems of measurement, techniques for data collection, and interpretation of results. Mr. Kay. Prereq.: Psych. 814. 3 cr.

835. Advanced Psychopathology
A study and review of the experimental and clinical literature with regard to etiological factors involved in the formation of pathological character trends and deviations. An evaluation of clinical theory and classification systems as related to the psychotherapeutic process. Mr. Lothrop. Prereq.: Psych. 654 and/or permission of the instructor. 3 cr.

841. Personality Theory
A critical evaluation of the major theories of personality with particular reference to the theoretical, clinical and experimental contributions to current personality theory. Mr. Jervis. 3 cr.

850. Advanced Social Psychology of Industry
An exploration of the methods and principles involved in studying man within the social structure of industry. Prereq.: Psych. 782 or by permission of the instructor. Mr. Kay. 3 cr.
862. **Psychology of Perception**

The experiments and theories dealing with the fundamental stimulus situation in the internal and external environment. This knowledge of how the organism sees and interprets his world has many applications, e.g., social stimulation, self-regard, and a basis for the projective tests. Mr. Hasle-rud. 3 cr.

864. **Introduction to the Rorschach Test**

The administration, scoring, and preliminary interpretation of the Rorschach Inkblot Test. Students will be required to purchase the test materials and to administer and score a minimum of twenty Rorschachs. Klopfer's scoring system will be used for the determinants and Beck's for location. Miss Riggs. 1 lec.; 1 lab.; 4 cr.

872. **Graduate Practicum**

Practical work experience in clinical or industrial psychology. Students will be assigned to institutions or industries and serve under experienced personnel and under supervision of departmental instructors. Prereq.: Open to a limited number of graduate students who secure permission of the departmental supervisor. Mr. Lothrop. Credits to be arranged up to a maximum of 6.

895, 896. **Reading and Research in Psychology**

A student may undertake a course of readings in psychological journals and books or work on an experiment or other research on some topic acceptable to both student and instructor. The projects are directed by individual conferences. Staff. 3 cr.

899. **Master's Thesis**

Open to students who are especially interested in doing independent original research. 6 cr.

**Resource Economics (21)**

William F. Henry, *Chairman*

Admission to graduate study in Resource Economics may be granted those who have satisfied the requirements for admission to the Graduate School and present evidence of satisfactory undergraduate training. Normally this will include nine or more credits in Economics, including Resource or Agricultural Economics, as evidence of aptitude for advanced training in the field. Candidates for the Master of Science degree will be required to pass a final examination. An acceptable thesis is normally a requirement for the degree, but approved course work may be substituted for the thesis.

706. **Economics of Resource Development**

Some of the classical and modern theories of economic development. Economic problems of land and resources in relation to market location, urban-rural conflicting demands, and conservation and water supply. Population mobility, capital needs, and the roles of public and private leader-
ship will complete the framework for discussion of the major resource development problems of New England. Mr. Bowring. Prereq.: Eco. 1. 3 cr.

708. Research Methods in Social Sciences

Designed to teach the scientific method of research to advanced students. The meaning of logic and the scientific method and the application of research techniques to identifying and solving problems. Prereq.: 3 hours of statistics. Mr. Drew. 3 cr.

711. Public Policy for Agriculture

Problems which are the basis for government and private policies in the production and marketing of agricultural products. Prices, production control, marketing agreements, conservation, and farm credit are appraised relative to the objectives of agriculture and the concept of general welfare. Mr. Drew. 3 cr.

715. Linear Programming

Setting up and solving problems by the simplex and distribution methods, variations in linear programming problems, solving input-output and game theory problems, and parametric programming. Least cost combinations, maximum profit combinations, transportation and spatial equilibrium, and intersector flows. Prereq.: Math. 7 or permission of instructor. Mr. Andrews. 3 cr.

795-796. Investigations in Resource Economics

Special assignments in readings and problems to satisfy the student's needs. Mr. Andrews, Mr. Bowring, Mr. Drew, Mr. Grinnell, and Mr. Henry. 1-3 cr.

804. Economics of Production and Resource Use

Principles of choice, resource use, and production under perfect and imperfect knowledge. The economic theory of resource allocation and the use of this theory in problem solving. Resource-product relationships, nature of cost, returns to scale, factor valuation and pricing, uncertainty, and interfirm relations. Mr. Andrews. 3 cr.

807. Statistical Analysis

Statistical measurement and research tools for use in the physical and social sciences. Regression, analysis of variance, factorial analysis, covariance, time series, sampling and experimental design. Mr. Bowring. 3 cr.

809. Agricultural Economics

Analysis of supply, demand, and price relationships. Appraisal of the economic theory relevant to decision-making in food production, marketing, and consumption, and on the competitive structure of the food industry. Mr. Henry. 3 cr.

895-896. Investigations in Resource Economics

With the advice and consent of the instructor, a student, prepared by training and experience to do independent work, may register for a reading and research course. The student will undertake assigned problems and readings under guidance of the instructor. Mr. Andrews, Mr. Bowring, Mr. Drew, Mr. Grinnell, and Mr. Henry. 1-3 cr.
397-398. **Seminar in Agricultural and Resource Policy**

Presentation and discussion of reports on public policy issues associated with agriculture and resource development. Departmental staff. May be repeated. 1 cr.

399. **Thesis**

To be arranged. 6-10 cr.

**Social Science (45)**

393, 394. **Internship in College Teaching**

Limited to Ford Foundation Scholars. Each student will be responsible for teaching one section of introductory courses in his major department in the Social Science division. This teaching will be done under faculty supervision. In addition, students will attend bi-weekly seminars designed to acquaint them with the various aspects of the college teaching profession. 3 cr.

**Sociology (68)**

Stuart Palmer, *Chairman*

Admission to graduate status in the Department of Sociology is granted to the student who meets the entrance requirements of the Graduate School, and who has passed a comprehensive examination in sociology which is prepared by the members of the Department. This examination may be taken, under appropriate supervision, at a time and place which is convenient to the candidate.

In addition to having fulfilled the general requirements, the successful candidate for the Master of Arts degree in sociology will have completed a thesis written in one of the following fields: criminology, cultural anthropology, mass communications, minority group relations, population, rural sociology, social movements, social stratification, social theory, and urban sociology. It is expected that competence in both method and theory will be demonstrated in the thesis. No more than nine semester hours' credit in other departments will be accepted. No general oral or written examination is required.

**701. Statistics**

Use of elementary statistical techniques in analysis of prepared data. Topics include probability, discrete and continuous probability distributions, distributions of sample statistics, small sample theory, elementary analysis of variance, regression, correlation, and the chi square. 3 cr.

**702. Quantitative Methods of Social Research**

Analysis of research problems; designing field studies and experiments; demonstration and practice in sampling, schedule construction, and inter-
viewing techniques. Students not majoring in Sociology nor enrolled in Social Service Curriculum may be admitted by permission of instructor. **Prereq.: Soc. 701. 3 cr.**

703, (703). **Criminology**

The scientific study and control of crime. The following are considered: indexes, rates and theories of crime and delinquency, police, courts, probation, prison and parole. 3 cr.

711, 712. **Development of Sociological Theory**

Social thought from Plato to the present. First Semester: the works of selected individuals from Plato to Comte. Second Semester: the 19th Century European social philosophers; the ideas of U. S. social scientists, especially their contributions to present day sociological thought. Students not majoring in Sociology may be admitted by permission of the instructor. 3 cr.

740. **Culture Change**

The study of various types of society leading to the development of a theory of culture change. Descriptive studies of institutional as well as theoretic materials selected from the writing of Comte, Marx, Spencer, Durkheim, Spengler, Sorokin, Redfield, and others. **Prereq.: Soc. 400 or consent of instructor. 3 cr.**

743. **Social Movements**

The factors related to the origin and development of reforms, revolutionary, religious, and other social movements. Generalizations concerning the organizations, structure, tactics, and leadership of social movements. The purposes and consequences of selected movements, as well as the relationships between social movements and social change. **Prereq.: Soc. 400. 3 cr. (Not offered in 1965-1966.)**

745. **Social Stratification**

Nature, functions, patterns, and effects of social stratification. Social mobility. The social class system in the United States. **Prereq.: Soc. 400. 3 cr.**

755. **Ethnography of Southeast Asia**

A study of the geographical, racial, cultural, and historical factors in the development of the area, together with detailed examinations of selected peoples and aspects of their cultures. **Prereq.: Soc. 411 or permission of instructor. 3 cr.**

770. **Culture, Personality, and Society**

Emergence of personality from the matrix of genetic, situational, and socio-cultural determinants viewed in cross-cultural perspective; dynamic interplay of the sociocultural and psychological behavioral systems. **Prereq.: Permission of instructor. 3 cr.**

815. **Criminology Internship**

A four-month, three-quarter time, paid internship in a correctional institution. Consists of various types of routine correctional work and of the execution of small research projects as requested by the director of the prison or reformatory. Opportunity for thesis research in this setting is available. Required for Master of Arts in sociology with specialization in criminology. No credit.
895, 896. Reading and Research in Sociology and Anthropology

897, 898. Special Topics Seminar

Under the direction of members of the Department on the basis of rotation and interest, seminars are offered in those fields listed under Soc. 895, 896. Prereq.: Consent of instructor. 3 cr.

899. Master's Thesis

Usually 6 cr., but up to 10 cr. when the problem warrants.

Soil and Water Science (23)

Allan B. Prince, Chairman

Before students are admitted to graduate study in Soil and Water Science they must have had an adequate preparation in the biological and physical sciences. A candidate for the Master's degree shall pass an oral or written examination covering his graduate courses and thesis.

701. Methods of Soil Analysis

Principles and practice of the more important physical and chemical methods of soil analysis, including sampling technique, particle size distribution, moisture retention, rheological properties, particle density, volume weight, cation exchange capacity, mineral element analysis. Opportunity for experience in the application of flame photometry, spectrophotometry, and isotopic tracer techniques to soil analytical problems. Mr. Prince. Prereq.: Biochem. 501 or Chem. 517 or their equivalent. 1 lec.; 2 lab.; 3 cr. (Alternate years; not offered in 1965-1966.)

702. Physics and Chemistry of Soil

Physical and chemical properties of soils; their measurement and relation to structure, water movement, temperature; and liberation absorption, and fixation of elements in soils. Mr. Prince. Prereq.: Chem. 401-402 or Chem. 403-404 or their equivalent. 3 lec.; 3 cr. (Alternate years; not offered in 1965-1966.)

703. Soil and Water Engineering

The hydrologic, soil, vegetal, and stream flow factors involved in the design and operation of erosion control structures, drainage systems, and irrigation systems. Mr. Byers. 2 lec.; 1 lab.; 3 cr.

704. Soil Classification and Mapping

The genesis, morphology, classification, and mapping of soils. Mr. Peterson. Prereq.: S. and W. 501 and Geol. 401 or 407 or permission of instructor. 2 lec.; 1 lab.; 3 cr. (Alternate years; offered in 1965-1966.)
710. **Ground-Water Hydrology**

Basic principles with emphasis on physical properties of water-bearing materials, Darcy’s law and the coefficient of permeability, selected steady and non-steady state solutions of the basic flow equation for ground-water motion, well hydraulics, and chemical quality of water. Mr. Hall. **Prereq.**: S. and W. 703 or permission of instructor. 3 lec.; 1 lab.; 4 cr.

795-796. **Investigations**

Offered in the following: a. Physics and Chemistry of Soils, Mr. Prince; b. Soil-Plant Relationships, Mr. Peterson. Elective only after consultation with the instructor in charge. Hours to be arranged. 1-4 credits.

797-798. **Soil and Water Science Seminar**

Library and reference work on special phases of soil and water problems. Practice in consulting literature and in preparation and presentation of reports and abstracts. Required each semester of seniors and graduate students majoring in soil and water science; elective for other qualified students. Staff. 1 cr.

802. **Advanced Soil Chemistry**

Lectures, discussions, and problem work in laboratory. Physical chemistry of soils and soil colloidal phenomena. Anion and cation exchange mechanism in soils. Theories of swelling. Crystallographic properties of the clay colloids and their relation to cation and anion exchange. The nature of soil acidity. Oxidation-reduction phenomena in soils. Mr. Prince. **Prereq.**: S. and W. 702 and Chem. 517 or permission of instructor. (At least one semester of physical chemistry recommended.) 3 cr.

803. **Advanced Ground-Water Hydrology**

Advanced treatment including velocity potential differential form of Darcy’s law, differential equation of ground-water motion, elastic properties of aquifers, leaky aquifer theory, and selected problems in well hydraulics. Mr. Hall. **Prereq.**: S. and W. 710 or permission of instructor. 3 cr.

895-896. **Research Techniques**

Offered in: a. Soil-Plant Relationships, Mr. Peterson. Elective only after consultation with the instructor in charge. Hours to be arranged. 1-4 cr.

899, (899). **Thesis**

A thesis study of some phase of Soil and Water Science is required of all candidates for an advanced degree. 6-10 cr.

**Zoology (70)**

Paul A. Wright, *Chairman*

To be admitted to graduate study in Zoology, a student must have completed basic undergraduate preparation in some field of the biological sciences, with at least two years’ work in Zoology. Suitable training in botany, chemistry, mathematics, and physics is also necessary. Students lacking these requirements may be admitted but will be required to complete certain courses which do not give graduate credit.
Candidates for the Master's degree in Zoology will be required to pass a written examination covering their general preparation in the field and their graduate and undergraduate courses in the biological sciences. With the permission of the Department Chairman and the prospective Supervisor of the Thesis, a student may elect to submit a thesis in partial fulfillment of the requirements of the Master's degree.

Students who apply for advancement to candidacy for the Ph.D. degree must demonstrate to the satisfaction of the Guidance Committee proficiency in reading zoological literature of two foreign languages, usually French and German, and demonstrate to the Doctoral Committee a broad basic knowledge of the field of Zoology and cognate sciences by means of an oral qualifying examination.

701, (701). Principles of Ecology
The interrelationships of plants and animals with both their living and non-living environments. Energy relationships, limiting factors, community organization, succession, and biogeography. Staff. Prereq.: Zool. 412 or equivalent. 3 cr.

704. Comparative Endocrinology
The various endocrine organs, vertebrate and invertebrate, with particular emphasis on endocrines which relate to physiology of reproduction. Mr. Wright. Prereq.: Permission. 3 cr.

(706), 706. Genetics
The physical basis of inheritance, expression, and interaction of the hereditary units, linkage, and variation. The application of Mendelian principles to plant and animal breeding. Mrs. Richardson. Prereq.: Zool. 412 or equivalent. 3 lec.; 1 lab.; 4 cr.

711, 712. Natural History and Taxonomy of the Vertebrates
The various classes of vertebrates; their habits, habitats, and life histories, with special reference to those occurring in eastern North America. Zool. 711 will include the fishes, amphibia, and reptiles. Zool. 712 will cover the mammals and birds. Mr. Sawyer. Prereq.: General Zoology and Zool. 508. 2 rec.; 2 labs.; 4 cr.

715. Natural History of Marine Invertebrates
A field and laboratory course aimed at acquainting the student with the inshore marine invertebrate metazoan animals of northern New England. Emphasis will be on identification, classification, habitat preferences, and behavior of these animals. Field work (collections and observation) will constitute a major part of the course. Mr. Moore. Prereq.: General Zoology. 1 lec.; 3 labs.; 4 cr. (Offered in Summer Session, but omitted during academic year, 1965-1966.)

721. Parasitology
An introductory course on some of the more important parasites causing diseases of man and animals. Living materials will be used as far as possible. Mr. Bullock. Prereq.: One year of zoology. 2 lec.; 2 lab.; 4 cr.
725. **General Physiology**

The fundamental physiological properties of excitability, contractility, conductivity, metabolism, growth, and reproduction. Mr. Hoornbeek. *Prereq.*: One year of zoology and organic chemistry. 3 lec.; 1 lab.; 4 cr.

729. **Vertebrate Morphogenesis**

A comparative study of the organ systems of the vertebrate body and their embryonic development. Mr. Staugaard. *Prereq.*: Zool. 507-508 or equivalent or permission. 3 lec.; 2 lab.; 5 cr.

730. **Elements of Histology**

The microscopic anatomy of principal tissues and organs of vertebrates. Mr. Bullock. *Prereq.*: Zool. 508 or equivalent or permission. 2 lec.; 2 lab.; 4 cr.

736. **Advanced Genetics**

Genetic recombinations and mutations, gene action in terms of physiological effects at the developmental and adult stages. Mr. Hoornbeek. *Prereq.*: Zool. 706 or equivalent. 3 lec.; 3 cr.

738. **Advanced Genetics Laboratory**

Problems and projects with small mammals and Drosophila, stressing physiological genetics. Student background and interest to determine content. Mr. Hoornbeek. *Prereq.*: Zool. 736 or equivalent, concurrently. 2 lab.; 2 cr.

795, 796. **Special Problems in Zoology**

801. **Freshwater Ecology**

An introduction to some of the chemical, physical, and biological facets of the special relationships between freshwater organisms and their environment. Laboratories will include limnological techniques and others necessary for analyzing the variations in freshwater habitat. Mr. Sawyer. *Prereq.*: Zool. 701; courses in physics, chemistry, invertebrate and vertebrate zoology, geology, algology, and aquatic entomology are desirable. 2 lec.; 2 lab.; 4 cr. (Offered fall, 1965; alternates with Zool. 803.)

803. **Marine Ecology**

The marine environment and its biota, based on application of general ecological principles. Field work will be largely confined to the shore. Students should be prepared to work in 2 to 3 feet of cold water. Field trips may be scheduled for early morning, late afternoon, or on weekends. Travel will be at students' expense and should not exceed $30 for the course. Mr. Swan and Staff. *Prereq.*: Zool. 701 or equivalent. 2 lec.; 2 lab.; 4 cr. (Omitted, 1965-1966; alternates with Zool. 801.)
818. Histochemistry

The principles and techniques for localization of inorganic and organic substances in tissue sections. Mr. Bullock. Prereq.: Zool. 730 and a knowledge of microtechnical procedures. 2 lec.; 2 lab.; 4 cr.

(820), (821). Invertebrate Zoology

(822). Protozoology

The general biology of free-living and parasitic Protozoa with particular emphasis on morphology, natural history, and economic importance. Prereq.: Zool. 722 or 820 or permission. Mr. Borror and Mr. Bullock. 2 lec.; 2 lab.; 4 cr. (Offered alternate years; offered in 1965-1966.)

824. Helminthology

The basic principles of parasitism as exhibited by various groups of parasitic worms. Emphasis on life cycles, physiology, and host-parasite relationships. Mr. Bullock. Prereq.: Zool. 721. 2 lec.; 1 lab.; 4 cr. (Not offered in academic year, 1965-1966; offered in Summer, 1965.)

826. Comparative Physiology

The means whereby animals, both vertebrate and invertebrate, have met the problems of irritability, nutrition, maintenance of a constant internal environment, and reproduction. Mr. Milne. Prereq.: Zool. 725. 3 lec.; 1 lab.; 4 cr.

830. Invertebrate Embryology

The developmental patterns as exhibited by the major invertebrate groups. This will be essentially a descriptive study based upon lectures, library, and laboratory work with living material. Mr. Staugaard. Prereq.: Zool. 820, 821. 2 rec.; 2 lab.; 4 cr. (Not offered in academic year, 1965-1966; offered in Summer, 1965.)

895, 896. Advanced Studies in Zoology

899. Master's Thesis

Open to students who wish to do independent original research. Prereq.: Permission of the Department Chairman and Prospective Supervisor. 1-6 cr.

999. Doctoral Research

Open to students who have declared their intention of proceeding to candidacy for the Ph.D. degree.
