ARTICLES

RECOGNIZING RISKS AND PAYING FOR RISK REDUCTION 189
Gary W. Johnson

Inspired by a recent report of EPA's Science Advisory Board, Mr. Johnson argues that it is imperative that we set regulatory priorities lest we invest available resources in reducing risks that are lower than others that might instead be addressed.

PUBLIC PARTICIPATION IN HAZARD MANAGEMENT: THE USE OF CITIZEN PANELS
IN THE U.S. 197
Ortwin Renn, Thomas Webler and Branden B. Johnson

After discussing the need for citizen participation in risk management and a method of facilitating such participation as developed in Germany, the authors discuss and analyze its subsequent modification and use in a sewage sludge management project in New Jersey.

RISK ASSESSMENT FOR DEVELOPMENTAL TOXICITY: AIRBORNE OCCUPATIONAL
EXPOSURE TO ETHANOL AND IODINE 227
Donald R. Mattison

Dean Mattison explains hazard identification, hazard characterization and exposure characterization as furnishing a foundation for risk assessment generally. He then illustrates their application in assessing the fetal risk posed by two common substances. Ultimately, he argues that only after risks have been so examined can women of child bearing age (or anyone) decide what if any measures are appropriate to avoid them.

FERTILE WOMEN MAY NOW APPLY: FETAL PROTECTION POLICIES AFTER
JOHNSON CONTROLS 261

Barbara Ruhe Grumet

In its recent interpretation of Title VII of the Civil Rights Act, the U.S. Supreme Court leaves little room for permissible occupational sex discrimination. However, its decision has wider implications. Here, Professor Grumet takes a look at some of them from both a legal and a social perspective, including matters such as employees' reproductive freedom and employers' potential liability for a variety of possible injuries to employees' offspring.
