DURHAM, NH – New Hampshire residents are much more confident in paper ballots currently used in New Hampshire than computerized touch screen voting systems to accurately count their vote. Confidence in a computerized touch screen voting system has declined over the past decade. More than four in five of New Hampshire residents are confident that their vote in the previous election was accurately counted, significantly higher than those who are confident in the accuracy of Power Ball.

These findings are based on the **WMUR Granite State Poll**,* conducted by the University of New Hampshire Survey Center. Five hundred and thirty-two (532) randomly selected New Hampshire adults were interviewed by landline and cellular telephone between July 9 and July 18, 2016. The margin of sampling error for the survey is +/- 4.2 percent. Included were four hundred and sixty-nine (469) likely 2016 general election voters (MSE = +/- 4.5%).

The security and accuracy of computerized voting systems has recently come into question in the wake of high-profile instances of electronic “hacking” and reports of aging or outdated computerized touch screen voting machines.

In New Hampshire, where only machines that produce a paper ballot are currently used, confidence in the accurate tabulation of the vote remains high: 83% of residents are very or somewhat confident that their vote in the previous election was accurately counted, while 13% are not very confident or not confident at all, and 4% don’t know or are unsure. Confidence that their vote was accurately counted has remained at similar levels since 2003.

“It’s clear that New Hampshire voters are more confident in elections that rely on paper than on touch screens without paper records. Confidence and turnout go hand-in-hand. The higher the confidence, the higher the value of the vote. This inspires more voters to make the extra effort that results in a higher turnout. Our consistently high turnout compared to the rest of the country proves the point,” said Secretary of State Bill Gardner.

* We ask that this copyrighted information be referred to as *the Granite State Poll*, sponsored by WMUR-TV, and conducted by the University of New Hampshire Survey Center.

New Hampshire residents are less confident in computerized touch screen voting machines than they were in the past: Currently, 52% say they are very or somewhat confident a touch screen computerized voting system would accurately count their vote, 46% are not very or not confident at all, and 2% don't know or are not sure, representing a 13% drop in confidence compared to responses in 2003.

New Hampshire residents by a wide margin prefer to use paper ballots rather than computerized touch screen voting systems to ensure an accurate tabulation of election results -- 69% of Granite State adults prefer paper ballots, only 23% prefer touch screen computerized systems, and 8% don't know or are unsure. The percentage of New Hampshire adults who prefer paper ballots has increased significantly since 2003 when 53% favored paper ballots, 38% favored a touch screen computerized system, and 10% didn't know or were unsure.

New Hampshire residents were asked about their level of confidence in the Powerball Lottery and are more confident that their vote was accurately counted than they are confident in the accuracy of Power Ball: 53% are very or somewhat confident in the accuracy of Power Ball, 22% are not very or not at all confident, and 24% don't know or are unsure.

Granite State Poll Methodology

These findings are based on the latest WMUR Granite State Poll, conducted by the University of New Hampshire Survey Center and funded by WMUR-TV, Manchester, NH. Five hundred and thirty-two (532) randomly selected New Hampshire adults were interviewed in English by landline and cellular telephone between July 9 and July 18, 2016. If a household included more than one adult, the adult who had the most recent birthday was selected to be interviewed.

The margin of sampling error is +/- 4.2 percent for the entire sample. Included were four hundred sixty-nine (469) likely 2016 general election voters (MSE +/- 4.5%). These MSE's have not been adjusted for design effect. The design effect for the survey is 1.1%.

The random sample used in the WMUR Granite State Poll was purchased from Marketing Systems Group (MSG), Horsham, PA. MSG screens each selected telephone number to eliminate non-working numbers, disconnected numbers, and business numbers to improve the efficiency of the sample, reducing the amount of time interviewers spend calling non-usable numbers.

The data have been weighted to adjust for numbers of adults and telephone lines within households. Additionally, data were weighted by respondent sex, age, and region of the state to targets from the most recent American Community Survey (ACS) conducted by the U.S. Census Bureau. In addition to potential sampling error, all surveys have other potential sources of non-sampling error including question order effects, question wording effects, and non-response. Due to rounding, percentages may not sum to 100%. The number of respondents in each demographic below may not equal the number reported in cross-tabulation tables as some respondents choose not to answer some questions.

For more information about the methodology used in the WMUR Granite State Poll, contact Dr. Andrew Smith at (603) 862-2226 or by email at andrew.smith@unh.edu.

Granite State Poll, July 2016 Demographics

Sex	N	%	Region	N	%
Male	260	49%	North Country	44	8%
Female	272	51%	Central/Lakes	100	19%
			Connecticut Valley	85	16%
			Mass Border	140	26%
			Seacoast	85	16%
			Manchester Area	78	15%
Age	N	%	Party Registration	N	%
18 to 34	132	27%	Democrat	139	26%
35 to 49	127	26%	Undeclared/Not Reg.	252	48%
50 to 64	148	30%	Republican	139	26%

College Graduate	159	31%	Republican	195	38%
Post-Graduate	131	26%			

Confidence Vote in Last Election Accurately Counted

"How confident are you that your vote in the last election was accurately counted? Would you say very confident...somewhat confident...not very confident...or not at all confident?"

	<u>Very Confident</u>	<u>Somewhat Confident</u>	<u>Not Very Confident</u>	<u>Not Confident At All</u>	<u>DK/ Unsure</u>	<u>(N)</u>
2016	57%	26%	7%	6%	4%	521
2003	57%	28%	4%	3%	9%	497

Confidence in Touch Screen Computerized Voting System

"Please assume for a moment that you will use a touch screen computerized voting system, similar to an ATM, to cast and count your ballot in the next election. The model you will use does not allow you to inspect a paper receipt of the ballot that is cast for you. How confident would you be that your vote was accurately counted ... very confident ... somewhat confident ... not very confident ... or not confident at all?"

	<u>Very Confident</u>	<u>Somewhat Confident</u>	<u>Not Very Confident</u>	<u>Not Confident At All</u>	<u>DK/ Unsure</u>	<u>(N)</u>
2016	19%	33%	23%	23%	2%	531
2003	31%	34%	17%	14%	4%	497

Greater Confidence in Paper Ballot or Touch Screen Computerized Voting System

"If you had a choice, would you have greater confidence in election results if you voted using a paper ballot or on a touch screen, ATM-like, computerized system?"

	<u>Paper Ballot</u>	<u>Touch Screen</u>	<u>DK/ Unsure</u>	<u>(N)</u>
2016	69%	23%	8%	527
2003	53%	38%	10%	493

Confidence in Accuracy of Power Ball

"Now on another subject, how confident are you in the accuracy of Power Ball? Would you say you are very confident ... somewhat confident ... not very confident ... or not at all confident?"

	<u>Very Confident</u>	<u>Somewhat Confident</u>	<u>Not Very Confident</u>	<u>Not Confident At All</u>	<u>DK/ Unsure</u>	<u>(N)</u>
2016	25%	28%	10%	12%	24%	506
2003	20%	31%	10%	13%	26%	484

Confidence in Accuracy of Power Ball
