CONTENTS

ARTICLES

RISK PERCEPTION AND DRUG SAFETY EVALUATION 281

Ilan B. Vertinsky and Donald A. Wehrung

The authors present a risk communication framework based on a survey of empirical research concerning public risk perceptions. They also apply it to the area of pharmaceutical regulation to suggest more effective regulatory strategies.

THE COGNITIVE STATUS OF RISK: A RESPONSE TO THOMPSON 313

L. James Valverde A., Jr.

Discussing the role that probability theory should play in risk analysis and management, Dr. Valverde argues that Thompson's approach puts too much emphasis on the distinction between risk subjectivism and risk objectivism in addressing the question, "When are risks real?"

CAN AN ECONOMIC APPROACH SOLVE THE HIGH-LEVEL NUCLEAR WASTE PROBLEM? 341

Herbert Inhaber

Building on the work of Professors O'Hare and Kunreuther, Dr. Inhaber proposes and argues for a non-coercive siting strategy that he calls a "reverse Dutch auction."

DOCTORS AT RISK: A PROBLEM AS VIEWED BY DECISION ANALYSIS 357

*Leonard P. Caccamo, Kimbroe J. Carter, Barbara A. Erickson,
William R. Johnson and Edward Kessler*

The authors closely analyze a case in which a Peer Review Organization cited a physician for treatment with potential for significant adverse effect. They also critique the regulatory scheme under which peer review occurs and conclude that such regulation interferes with physicians' primary obligations, fails to encourage cost-effective behavior and may decrease the quality of medical care.
