www.unh.edu/survey-center

DURHAM, NH – New Hampshire Governor Maggie Hassan continues to lead her Republican challengers Walt Havenstein and Andrew Hemingway by double-digits.

These findings are based on the latest **WMUR Granite State Poll**,* conducted by the University of New Hampshire Survey Center. Eight hundred and twenty-seven (827) randomly selected New Hampshire adults were interviewed by landline and cellular telephone between August 7 and August 17, 2014. The margin of sampling error for the survey is +/- 3.4 percent. The sample included 609 likely voters (with a +/- 4.0 percent margin of sampling error).

2014 NH Governor Election

Although the election is less than three months away, very few New Hampshire voters have decided who they will vote for in the 2014 gubernatorial election -- 21% have definitely decided on someone to support, 15% are leaning toward someone and 64% are still trying to decide.

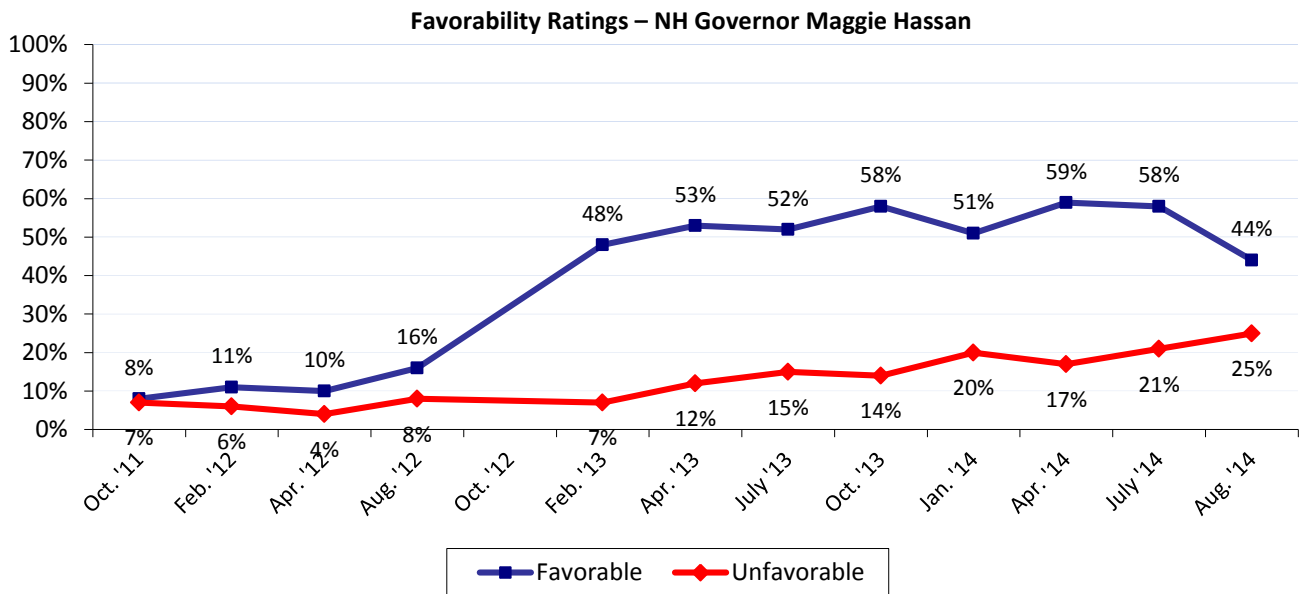

* We ask that this copyrighted information be referred to as *the Granite State Poll*, sponsored by WMUR-TV, and conducted by the University of New Hampshire Survey Center.

Favorability Ratings – Governor Maggie Hassan**

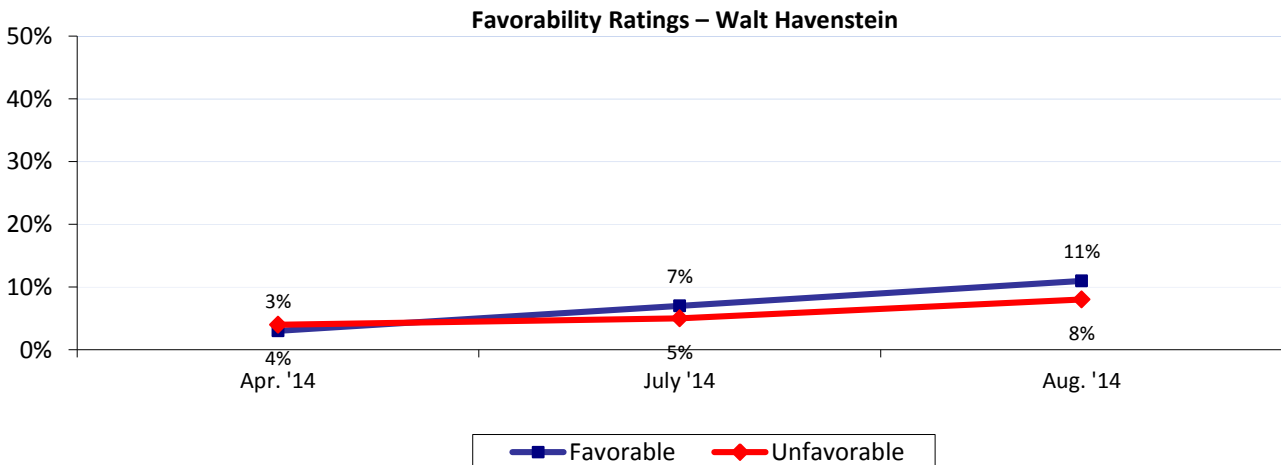

In November, Granite Staters will go to the polls to elect the state’s Governor, who serves only a two-year term. Governor Hassan is seeking election for a second term and is being challenged in the Democratic Primary by Ian Freeman (D-Keene) and Clecia Terrio (D-Manchester). On the Republican side, Walt Havenstein (R-Alton), Andrew Hemingway (R-Bristol), Jonathan Smolin (R-Alton) and Daniel Greene (R-Pittsfield) are vying for the GOP nomination. All challengers are largely unknown to Granite Staters.

Governor Maggie Hassan has seen her favorability drop somewhat in the last month. Currently, 44% of New Hampshire adults say they have a favorable opinion of Hassan, 25% have an unfavorable opinion, 12% are neutral, and 19% say they don’t know enough about her to say. Hassan’s net favorability rating, the percentage having a favorable opinion minus the percentage having an unfavorable opinion, is a +19%, which is down from +37% in July. Hassan remains very popular among Democrats (+64% net favorable) and somewhat popular among Independents (+11%), but unpopular among Republicans (-23%).

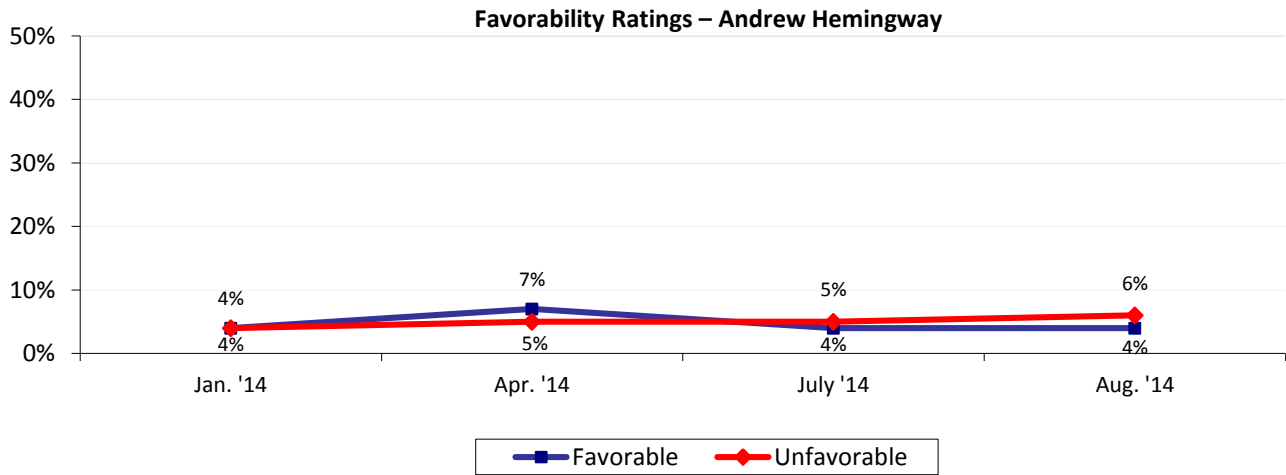

Favorability Ratings – Republican & Democrat Challengers

Currently 11% of New Hampshire adults have a favorable opinion of Havenstein, 8% have an unfavorable opinion, 3% are neutral and 78% don’t know enough to say. His net favorability is +3%, which is up from +2% in July. Havenstein’s net favorability among 2014 likely voters is +4%.

** In this poll, candidate favorability was asked slightly differently than past polls. See methodology for details.

Only 4% of New Hampshire adults have a favorable opinion of Hemingway, 6% have an unfavorable opinion, 3% are neutral and 87% don't know enough to say. His net favorability is -2%, which is down from -1% in July. Hemingway's net favorability among 2014 likely voters is also -2%.

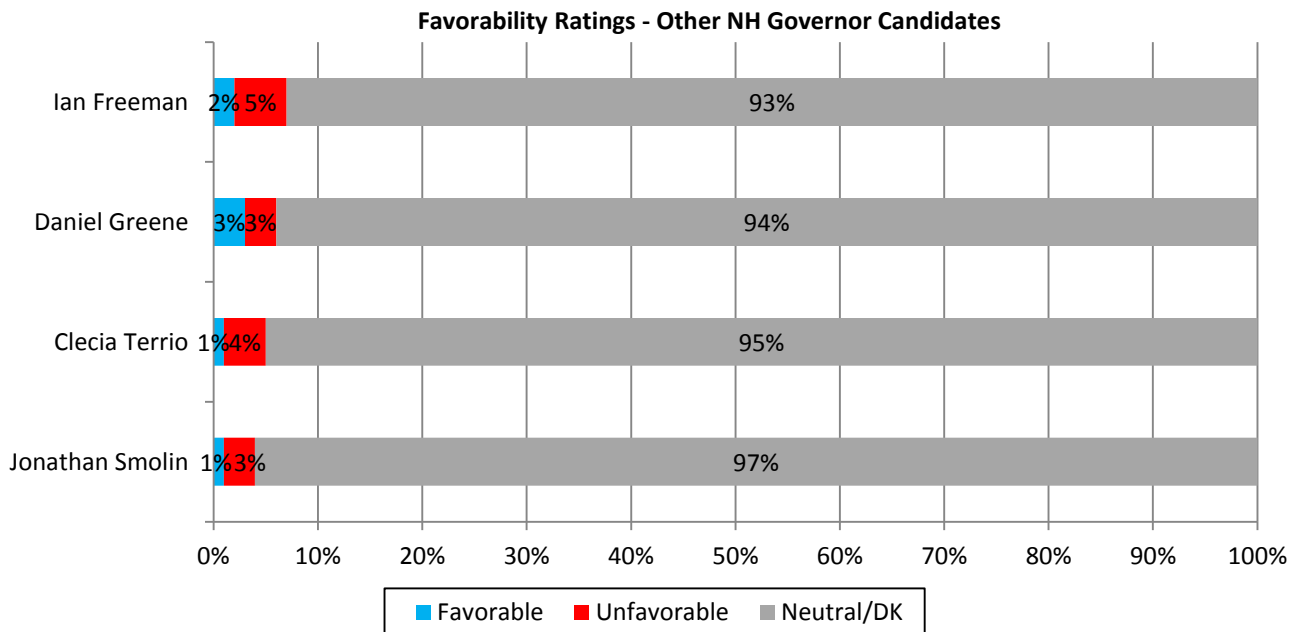

Very few New Hampshire residents know enough about the remaining four gubernatorial candidates to have an opinion on them. Only 2% have a favorable opinion of Freeman, 5% have an unfavorable opinion, 2% are neutral and 91% don't know enough to say. Freeman's net favorability is -3%.

Three percent (3%) have a favorable opinion of Greene, 3% have an unfavorable opinion, 1% are neutral, and 93% don't know enough to say. Greene's net favorability is 0%.

One percent (1%) have a favorable opinion of Terrio, 4% have an unfavorable opinion of her, 1% are neutral and 94% don't know enough about her to say. Terrio's net favorability is -3%.

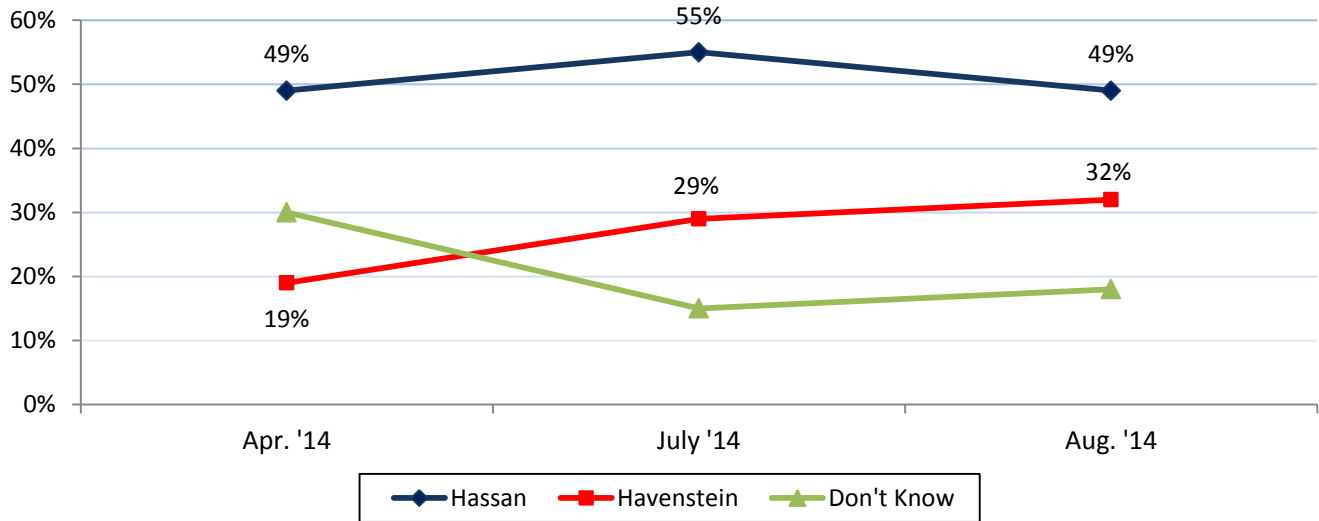

One percent (1%) have a favorable opinion of Smolin, 3% have an unfavorable opinion, 2% are neutral and 95% don't know enough about him to say. Smolin's net favorability is -2%.

Gubernatorial Trial Heats

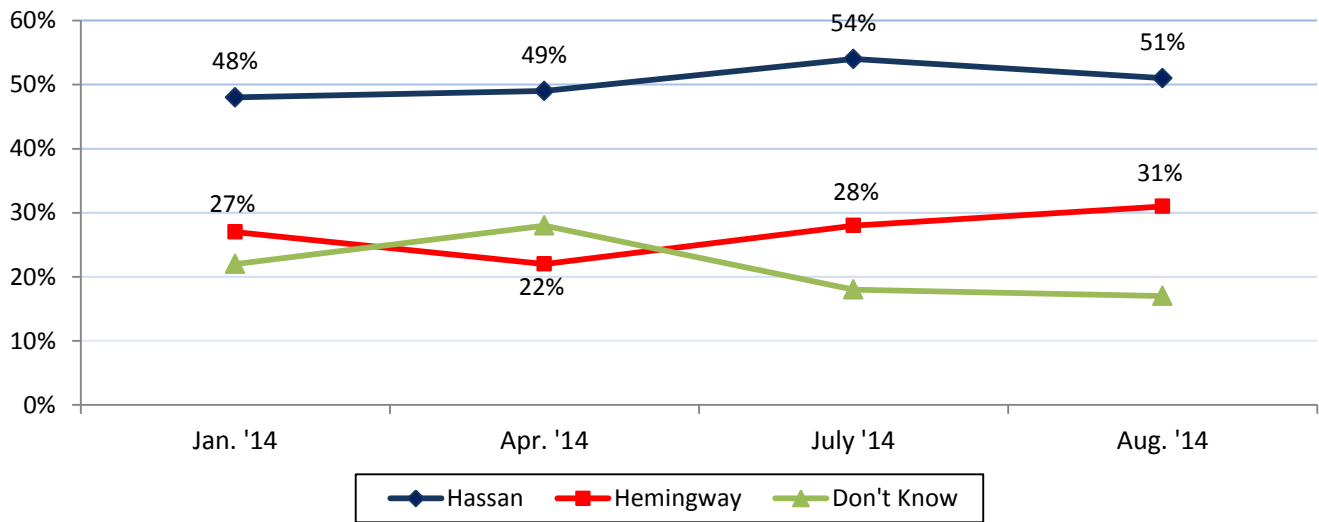

If the 2014 gubernatorial election were held today between Maggie Hassan and Walt Havenstein, 49% of likely voters would vote for Hassan, 32% would vote for Havenstein, 1% would vote for someone else and 18% are undecided.

Governor - Hassan vs. Havenstein - Likely Voters

If Andrew Hemingway were the Republican nominee, 51% of likely voters would vote for Hassan, 31% would vote for Hemingway, 1% would vote for someone else and 17% are undecided.

Governor - Hassan vs. Hemingway - Likely Voters

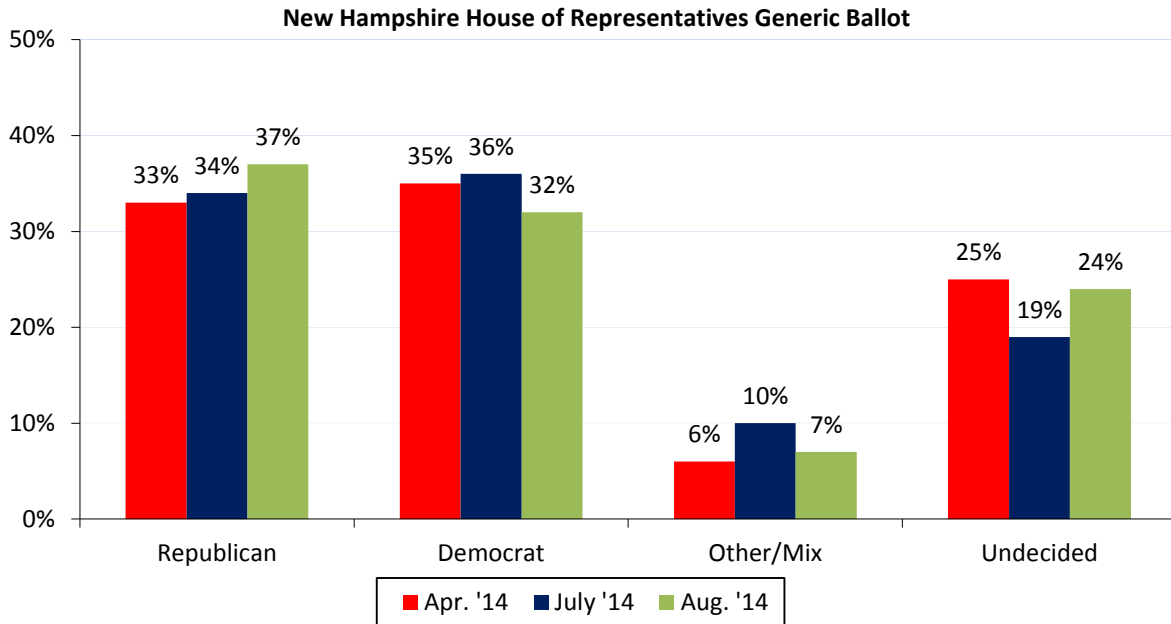

As would be expected in hypothetical matchups this early, Democrats and Republicans largely support their party's candidate and many Independents are undecided. Currently, Hassan leads both Havenstein (35%-22%) and Hemingway (38%-17%) among Independents.

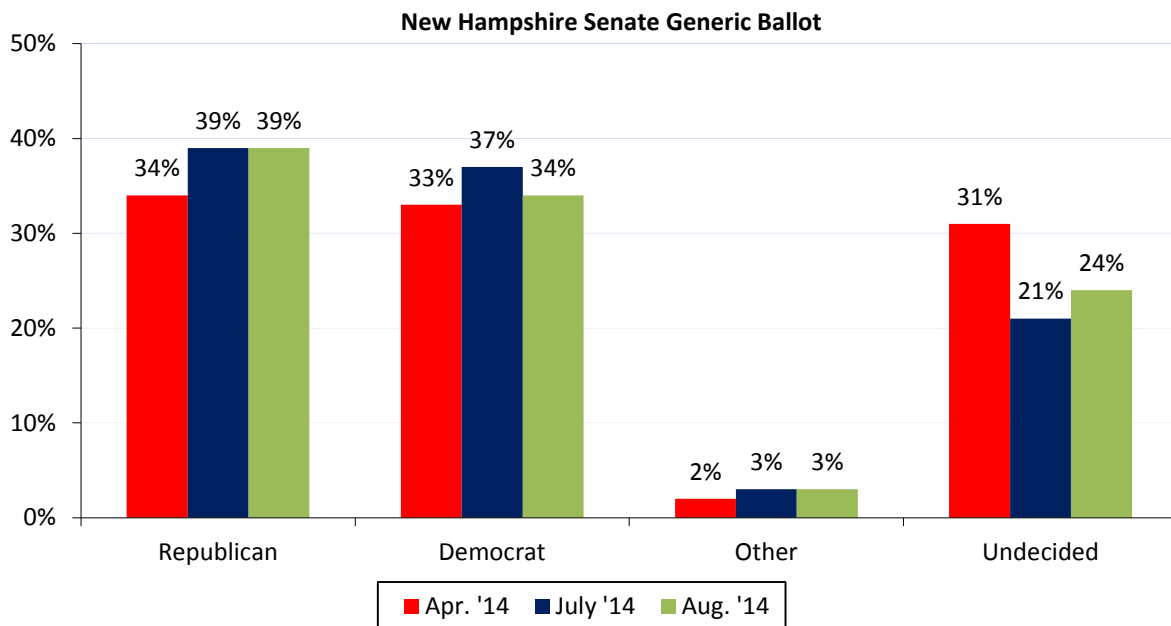

New Hampshire House of Representatives

Likely 2014 New Hampshire voters were asked which party's candidate they planned on supporting in the upcoming election for state representatives. Currently, 37% plan on supporting Republican candidates, 32% plan on supporting Democratic candidates, 7% plan on supporting another party or a mix of Republicans and Democrats, and 24% are undecided.

Based on an evaluation of past "generic ballot" polling in New Hampshire and actual election results, these results would translate into 264 seats for Republicans and 136 seats for Democrats. But this estimate, and the estimate for Senate seats, is highly dependent on actual turnout in November.

Likely 2014 New Hampshire voters were also asked which party's candidate they planned on supporting for State Senate -- 39% support Republican candidates, 34% support Democratic candidates, 3% support another party, and 24% are undecided. Based on an evaluation of past "generic ballot" polling in New Hampshire and actual election results, these results would translate into 16 seats for Republicans and 8 seats for Democrats.

Granite State Poll Methodology

These findings are based on the latest WMUR Granite State Poll, conducted by the University of New Hampshire Survey Center. Eight hundred and twenty-seven (827) randomly selected New Hampshire adults were interviewed by landline and cellular telephone between August 7 and August 17, 2014. The margin of sampling error for the survey is +/- 3.4 percent. The sample included 609 likely voters (with a +/- 4.0 percent margin of sampling error).

The data have been weighted to adjust for numbers of adults and telephone lines within households, respondent sex, age, and region of the state. In addition to potential sampling error, all surveys have other potential sources of non-sampling error including question order effects, question wording effects, and non-response. Due to rounding, percentages may sum to just above or below 100%. Respondent numbers in each demographic may not equal the total respondent number due to respondents choosing not to answer some demographic questions.

Granite State Poll, August 2014 Demographics

Sex	N	%	Region	N	%

Typically in the Granite State Poll, candidate favorability is asked like this: "Next, I'd like to get your overall opinion of some people in the news. As I read each name, please say if you have a favorable or unfavorable opinion of this person - or if you have never heard of him or her. Governor Maggie Hassan?"

In this poll, candidate favorability was asked: "Next, I'm going to read you a list of the candidates who have filed to run for Governor. As I read each name, please say if you have a favorable or unfavorable opinion of this person - or if you don't know enough about them to say. Maggie Hassan?"

(N=)	(369)	(488)	(593)

A historical analysis was done looking at the results of the "generic ballot" question and the actual number of seats won by Republicans in the New Hampshire House and Senate in the 2000 through 2012 elections was presented at the annual meeting of the American Association for Public Opinion Research Annual (AAPOR), and is available from the UNH Survey Center.

The model developed in this paper used for estimating House seats from the generic ballot question is:
 $\text{HOUSE SEATS} = -264.711 + (2\text{-party GOP estimate} * 986.291)$

In this Granite State Poll, the two party estimate of House vote percentage for Republicans, 53.6% (37% GOP / (37% GOP + 32% DEM) = 53.6%) is calculated and inserted into the formula above. This results in an estimate of 264 Republican House seats and 136 Democratic House seats.

The model developed for estimating Senate seats from the generic ballot question is:
 $\text{SENATE SEATS} = -20.355 + (2\text{-party GOP estimate} * 68.817)$

In this Granite State Poll, the two party estimate of Senate vote percentage for Republicans, 53.4% (39% GOP / (39% GOP + 34% DEM) = 53.4%) is calculated and inserted into the formula above. This results in an estimate of 16 Republican Senate seats and 8 Democratic Senate seats.
