Analysis of Feeding Stuffs

MADE FOR THE

STATE DEPARTMENT OF AGRICULTURE

BY B. E. CURRY AND T. O. SMITH

New Hampshire College

of

Agriculture and the Mechanic Arts

Durham, N. H.

Feeding-Stuffs Inspection and Analyses, 1917.

The samples of the various brands of feeding-stuffs for the 1917 inspection were collected by Mr. A. G. Weeks, under the direction of Mr. A. L. Felker, Commissioner of Agriculture. Aside from duplicates, 302 samples were received and analyzed at the New Hampshire Experiment Station. Samples representing duplicates are not reported in this bulletin.

In this report a percentage valuation is given for the carbohydrates. The percentage of ash and moisture has been determined this year in addition to the determination of protein, fat and crude fiber which has been reported heretofore. The carbohydrate value includes the crude fiber as well as starches, sugar, etc. The crude fiber has a low digestibility and this should be kept in mind in making comparative or other valuations of a given sample of feed-stuff.

The percentage of carbohydrates is obtained by subtracting the sum of the percentage of protein, fat, ash, and moisture from 100 per cent.

A statement of the ingredients of the compounded feedstuffs as certified by the manufacturers, will be found on pages 12 to 16.

Messrs. A. J. Grant, E. N. Sanders, F. A. Barker, H. C. Fogg, and P. B. Place have assisted in the preparation of the following data.

Copies of this report will be sent free upon request to the Director of the New Hampshire Experiment Station, Durham, N. H., or the Commissioner of Agriculture, Concord, N. H.
