NUMBER 4

COMMENT

DAUBERT'S SIGNIFICANCE 283

The author's review and note the limited reach of *Daubert v. Merrell Dow Pharmaceuticals*. They also address its implications for concerned non-lawyers.

Thomas G. Field, Jr. & Colleen M. Keegan

ARTICLES

AUTHORIAL VOICE, IMPLIED AUDIENCES AND THE DRAFTING OF THE 1988 AIDS NATIONAL MAILING 287

Mary Harris Veeder

Dr. Veeder analyzes changes throughout many drafts of the 1988 ANM and finds that the process of negotiated drafting contributed to its success. She also concludes that risk communicators should focus attention on audience needs rather than competing truth claims.

SCHOOLS RESPOND TO RISK MANAGEMENT PROGRAMS FOR ASBESTOS, LEAD IN DRINKING WATER AND RADON 309

*Ann Fisher, Lauraine G. Chestnut, Ruth H. Chapman
& Robert D. Rowe*

Based on a study of the three EPA-initiated, public school risk management programs noted in the title, the authors find that state agency involvement is an important factor in the success of such programs. They also find, e.g., that school districts are justifiably reluctant to comply with tentative programs.

INDIVIDUAL CONTROL OF RISK: SEAT BELT USE, SUBJECTIVE NORMS AND THE THEORY OF REASONED ACTION 329

*Juanita V. Field, Kenneth D. Boehm, Kevin M. Vincent
Jessica L. Sullivan & Brady G. Serafin*

The authors attempted to validate aspects of the TRA by the use of scenarios. Factor analysis of their data supports the theory that intention is a major determinate of behavior but fails to establish the influence of scenarios on subjects' intention to wear seat belts.

REGULATE POLLUTION OR LAND USE? MANAGING TOXIC AIR CONTAMINANTS IN SOUTHERN CALIFORNIA	343
--	-----

Marc Dohan

A California air quality management district recently proposed to limit the location of potential receivers, in contrast with sources, of air toxics. The author argues that, although this particular proposal was later abandoned, it amounted to land use regulation. He also argues that such action usurps local control and is unwarranted.
