

The New Hampshire.

VOL. 2, No. 12.

DURHAM, N. H., DECEMBER 4, 1912

PRICE 5 CENTS

PRACTICE BEGAN MONDAY. Coach Eberle in Charge of Basketball.

The basketball season is on. Practice began last Monday afternoon under the direction of Captain P. C. Jones and Coach "Tod" Eberle. An unusually large number of candidates have reported for the team, and the material seems to be of a promising nature.

Among the old letter men to report are Captain Jones, forward, Sanborn, center, Came and Thompson, guards of last season's five. The freshmen and two year class were well represented in the large squad on the floor Monday night. With such a large squad to pick from, Coach Eberle should turn out New Hampshire's usual winning five.

The coach will have a long period, in which to size up the men and pick the five, since the first game on the schedule does not occur until Jan. 4. The floor in the gymnasium is unusually large and the new men should welcome the long preliminary practice, because it gives them an opportunity to become familiar with the floor. A number are accustomed to playing in much smaller halls.

In the issue of The New Hampshire a few weeks ago, it was stated that the position of forward was apparently the only position vacant on the team. However, this is not to be taken seriously, because the coach states that the best five men on the squad will represent New Hampshire in the coming contests. The old men will take their chances along with the new comers, and the best man will win out. Every position on the team is vacant until the best man has been secured for the place.

BEN GREET PLAYERS COMING.

The next number of the lecture course which is to take place in Thompson Hall, Dec. 11, will be different from anything which has occurred heretofore.

The Ben Greet Company will present Shakespeare's, "Comedy of Errors." This will comprise thirteen characters, and will be presented with complete stage settings.

This company of players is travelling nearly all the year, and most of their performances take place in college-towns. Mr. Greet, the leader of the company, is largely responsible for the revival of interest in Shakespearean plays, and his presence alone should induce everyone, who can possibly do so, to attend.

PLANS MADE FOR SORORITY PLAY.

The Tri Alpha Sorority are planning to present a play sometime in the near future. It will be merely "for art's sake," and not for the financial returns. The play which they will present will probably be the Greek drama, "Elektra," by Sophocles. It will take place in Thompson Hall, and will be conducted entirely by the young ladies of the sorority, assisted by Prof. A. E. Richards.

A COURSE IN PATRIOTISM.

Teaching of This Subject May Be Made Compulsory In Utah.

An amendment to the State constitution, making the teaching of patriotism in the public schools compulsory, was recommended by the Utah Teachers' Association. There was opposition to the resolution presented by D. H. Christensen, superintendent of the Salt Lake City schools, and the resolution was carried by a small majority. Interest in the subject grew out of the expulsion from the Salt Lake City schools of two little girls, who declared themselves Socialists and refused to take part in the flag saluting exercises — Boston Evening Transcript

ANNOUNCEMENT.

Mr. and Mrs. Aaron Carr Barnard announce the marriage of their daughter Marjorie Caldwell, to Mr. John Edward Parker '09 on Wednesday, October the sixteenth, nineteen hundred and twelve, at Dunbarton, New Hampshire.

Mr. and Mrs. Parker are now residing on the Parker ancestral homestead, at Parker Station, Goffstown, N. H.

A BUNCO GAME.

Several families of New Hampshire students, and a number of students themselves have been the object of a "bunco" game, which is being tried by a young man who has been travelling around New England posing as the brother of James B. Yates '13 of Biddeford, Me.

This young man has approached families who have sons in New Hampshire and students of the college in their own towns, stating that he has a brother in New Hampshire, J. B. Yates '13, given plausible reasons why he is "broke," and asks for enough money to reach his home in Biddeford, Me. He has stated that his brother will give the money to the family representative at New Hampshire, in case he approached a student, that his brother would return the money at Durham, when he saw him. In some instances, the game has worked and the stranger has obtained enough money for the necessary carfare. His victims, subsequently, have asked "Jimmie" Yates to make good the loan made to his brother.

The matter has been called to "Jimmie" Yates' attention very strongly during the last two weeks, and he wishes to state that he has no brother who is travelling around New England, and he wishes to warn the families of New Hampshire students, and students themselves, to be on the lookout for the stranger, who is obtaining money under false pretences.

Not since a baby fell out of a New York City elevated car window and landed uninjured in an astonished citizen's arms has a more curious accident happened than one that occurred last week on a Ninth Avenue elevated train. A violent lurch at a curve pitched a trainman from the car to the street below; but he alighted on an upholstered couch that happened to be on the sidewalk. The man's life was saved by the remarkable coincidence. — "The Outlook."

Prominent Alumni. FREDERICK DRIGGS FULLER, '92.

Frederick Driggs Fuller, son of John M. and Martha S. (Driggs) Fuller, was born on a farm in Hanover, N. H., May, 14, 1873. He attended the public schools of his native town, graduating from the Hanover High School in 1888. Being situated so that he could continue his study without interruption, he entered college in the fall of 1888 and graduated from New Hampshire College of Agriculture and Mechanic Arts in 1892. During his college course he specialized in botany and chemistry, receiving first prize in both subjects. For three years following his graduation he served as assistant chemist of the New Hampshire Agricultural Experiment Station. The college year of 1895-96 was spent in post-graduate study in advanced chemistry at Worcester Polytechnic Institute, Worcester, Mass., and October 1, 1896, he received the appointment as assistant chemist of the New York Agricultural Experiment Station, situated in Geneva N. Y.

At the Geneva Station, Mr. Fuller had considerable experience as an investigator in agricultural chemistry. He was especially interested in experiments in animal and plant nutrition, studying the food source of milk fat, the metabolism of sulphur in the animal body and the effect of fertilizers on plant growth.

In November, 1902, Mr. Fuller was placed in charge of the analysis of cattle foods under the Feeding Stuff Law in New York and also of the work in plant nutrition, the latter being an investigation concerning the effect of different fertilizers applied in varying quantities on the growth and composition of cereal crops.

In 1902, Mr. Fuller was associate referee on foods and feeding stuffs for the Association of Official Agricultural Chemists of the United States and was appointed referee on the same subject in 1903. While in Geneva he was co-author of three bulletins entitled "Inspection of Feeding Stuff" in 1902, 1903 and 1904, and one on "The Food Source of Milk Fat; with studies on the Nutrition of Milch Cows."

At the time of the St. Louis Exposition, Mr. Fuller was selected to arrange for the exposition a collection of feeding stuffs, subject to inspection in the several states and suitable for illustration to classes in animal nutrition. The collection formed a portion of the collective exhibit of the Colleges of Agriculture and Mechanic Arts and the experiment Stations of the United States, and, on account of its excellence was awarded a gold medal.

On May 1, 1905, Mr. Fuller resigned his position at Geneva to accept a more responsible one in connection with the Department of Agriculture, Harrisburg, Pa. He then took the position of chemist in charge of the analysis of commercial feeding stuffs. Inasmuch as there was no chemical laboratory connected with the Department of Agriculture at that time, it was necessary to install one; and in a short time through his assistance, the state of

Pennsylvania came into the possession of a well-equipped chemical laboratory, which developed into one of the best laboratories in the country. On August 1, 1907, the work was raised to the dignity of a Bureau and Mr. Fuller was promoted to the position of chief chemist of the Department. As a result of the energetic effort of Mr. Fuller in the detection of adulteration of feeding stuffs and in the enforcement of the Pennsylvania law, the quality of the feeding stuffs on the markets in that state improved. Many inferior articles were driven out of the state, and thousands of dollars were saved to the consumers of feeding stuff in Pennsylvania. The results of his chemical and microscopical investigations were accepted by the courts of Pennsylvania and no defendant took an appeal because of any doubt in the accuracy of his work. In addition to the examination of feeding stuffs, Mr. Fuller and his assistants were responsible for the chemical analysis of linseed oil and Paris green and the detection of adulteration of these articles.

On September 25, 1907, Mr. Fuller had the honor of addressing the Thirtieth Annual Convention of the Pennsylvania State Millers' Association on "The Feeding Stuff Law of Pennsylvania in its relation to Pennsylvania Millers." The address was printed in pamphlet form and distributed to members of the Association. He also prepared a paper which was read by the Secretary of the Association at its annual convention in 1908. By special invitation, Mr. Fuller attended the meetings of the Millers' National Federation and National Feed Dealers' Association held in Detroit, Mich., in 1908, and by request assisted a committee in the preparation of a Uniform Feed Law for the several states. While connected with the Pennsylvania Department of Agriculture, Mr. Fuller prepared four bulletins relating to the inspection of feeding stuffs and one covering the analysis of Paris green were published by the direction of the Secretary of Agriculture.

On April 1, 1909, he resigned his position at Harrisburg to accept a more lucrative one as Chief of the Cattle Food and Grain Investigation Laboratory, Bureau of Chemistry, U. S. Department of Agriculture, Washington, D. C. Having received an attractive offer to enter the field of commercial activity, Mr. Fuller resigned his government position on July 17, 1909, to return to Harrisburg as General Manager and Chemist of the Pennsylvania Primo Feed Company. While connected with the Bureau of Chemistry at Washington, Mr. Fuller addressed conventions in Milwaukee and Chicago on subjects relating to the manufacture and sale of commercial feeding stuffs. In the spring of 1910, he received a call from the Middle West and on June 1, 1910, he was appointed Chief Deputy State Chemist of Indiana on the staff of Purdue University Agricultural Experiment Station, Lafayette, Ind., which position he now holds.

Mr. Fuller is at the present time carrying on an investigation relating to "A Chemical and Microscopical Study of Condimental Stock and Poultry Foods, Conditioners, Tonics, etc., on sale in the State of Indiana" and is a candidate for the degree of Master of Science which he expects to

DURHAM, N. H., DEC. 4, 1912.

A PROGRESSIVE FOOTBALL SEASON.

The contest between the Army and the Navy on Saturday closed the football season of 1912, and taking the season either as a whole or in detail, it has been the most satisfactory one in recent years, if not the most successful in the entire history of this American game, from the point of view of skillful athletics and clean play, and from that of the spectator who has been constantly thrilled by individual work and by consistent exhibitions of marvelous team unity of action. The interest in football, as seen from the grandstand, has been immensely improved by the changes which have been made in the rules during the last few years. It is now free from the features that formerly were wont to be cast athwart the gridiron, even when the play was most brilliant. It is more spectacular. An opportunity for more individuality has been accompanied by a chance for better team work, and the peculiar excellencies of the contestants have been developed. Each eleven has been brought to the top notch in discipline, quality, and deportment.

To the newer and better coaching system belongs the credit for all this. Men of higher standard have been attached to, and encouraged to take part in this work. The morale of the elevens has been advanced accordingly. There is a different, a much higher conception of the game among the players. All seem to be imbued with the idea that intellect is a more important factor even than physical strength in the outcome of a game, and all seem to be moved by an ideal that embraces not only personal and college pride but regard for the effect that the example of university teams will have upon the athletics and the youth of the country.

The composition of the elevens has withstood sharper scrutiny, as the men have borne closer analysis, this year than ever before. There has been represented on the teams a higher standard of scholarship. The players have often been those who have won unusual distinction in the class room. Last, but certainly not least, for the

Have your dollar ready.

most part the official management of the games this year has been highly efficient and commendable. Rules have been enforced, discipline has been maintained, dignity has been given to the contests and the spectators have come away from each of them, even when disappointed with the result, with the feeling that in football the country has one other game deserving of national title and applause.

Basketball season has commenced. The squad at the present time is unusually large, and it will take time for the coach to size up the material. Naturally, the old men, on account of their experience will be given the preference during the first nights of practice in the line-up of the first five. This is to be expected. Now, let the newcomers not become discouraged, and quit, because the coach did not happen to pick them out as stars at the opening practices. Stick it out, and if you are better than the old men, the coach will soon find it out, and it will be your pleasure to play in the first five. Please remember that the coach is under a disadvantage with a large squad and that it takes time to size up the men. Don't let any one quit, because he thinks he is not getting a show.

no rain in October and the wheat is small and does not look like it would stand the winter well.

We finished husking yesterday. From the acre where we tried your theory about bone-meal and clover making the Potash available, we harvested 50 bushels of rather chaffy corn, and from the rest of the field, where we used bone, clover and 50 lbs. Muriate of Potash per acre, we husked out 70 bushels per acre of tip-top corn that is nearly all fit to sell on the ear for seed corn.

I figure that a ton of Muriate of Potash on 40 acres of corn will pay for a year's post graduate study for you and leave you a little spare change to chip in for athletics.

DE LAVAL CREAM SEPARATORS

Are in a Class by Themselves

They cost but a little more than the cheapest, while they save twice as much and last five times as long as other separators.

They save their cost every six months over gravity setting systems and every year over other separators, while they may be bought for cash or on such liberal terms that they will actually pay for themselves.

Every assertion thus briefly made is subject to demonstrative proof to your own satisfaction by the nearest DE LAVAL local agent, or by your writing to the Company direct.

Why then, in the name of simple common sense, should anyone who has use for a Cream Separator go without one, buy other than a DE LAVAL or continue the use of an inferior separator?

receive at Purdue University in June.

Mr. Fuller is a ruling elder in the Presbyterian Church and his political views are those of the Republican party.

He is a member of the Society of the Sigma Xi and the Kappa Sigma fraternity; American Chemical Society; American Association for the Advancement of Science; Association of Official Agricultural Chemists of the United States; Association of Feed Control Officials of the United States; National Geographic Society; Indiana Academy of Science; Eighth International Congress of Applied Chemistry and the Lincoln Club of Lafayette, Ind.

Mr. Fuller was married in 1895 to Abby Florence Chamberlin of Durham, N. H., and they have four children; Irene Mabel; Allan Chamberlin; Whitman Hamilton and Raymond Nelson.

AT THE MANCHESTER CONFERENCE.

New Hampshire College was well represented at the annual Y. M. C. A., Conference, held in Manchester, Nov. 29, Dec. 1. This conference is open to all "prep" school boys and college men. New Hampshire College delegates cooperated with the leaders of the conference in making it one of the grandest successes in the history of the organization. The delegates from the college were P. C. Jones, P. A. Foster, H. V. Bent, C. R. Heath, E. J. Carleton, H. H. Lindquist, W. E. Howard Jr., W. S. Bartlett and Fred Manter.

FACULTY HUNT.

On Thanksgiving day, Professors Taylor, Putnam, Steek, Smith and students, Andrew and Barr comprised a hunting party. They scoured the neighboring woods, and after scouting around all the afternoon, returned home, having secured, through their concerted efforts, the sum total of one blind rabbit with a tapeworm.

Prof. Steek did not have occasion to fire his musket once, and when Taylor discharged his, it nearly "kicked" him over, as both barrels were discharged simultaneously.

"Teaching citizens of the State to speak, read and write German through the correspondence study method is the latest undertaking of the University of Wisconsin extension division. Eighteen courses in German that range all the way from easiest elementary German to teachers' courses are now offered.

A Girton undergraduate, says an exchange, having inadvertently changed umbrellas with a fellow student evolved this note: "Miss—presents her compliments to Miss—, and begs to say that she has an umbrella which isn't mine. So if you have on that isn't hers, no doubt they are the ones." The exchange neglects to say that this epistolary entanglement was probably a "grind" by a Girtons senior on her junior friend.—The Outlook Oct. 26.

The William H. Baldwin prize in government at Harvard will be awarded this year for an essay on the subject: "The Best Sources of City Revenue." The prize is for on hundred dollars and is awarded annually for the best essay on municipal government, and it is open to competition by under-graduates of any American college. For the last few years the prize has been won by Harvard students. —Boston Evening Transcript, (Oct. 14.)

Modern History.

Modern History of the dairy world
reveals these facts.

Sanitation is a constant watch-
word to those who produce the
highest quality products.

Correct dairy sanitation cannot
be produced by soap compounds,
strong caustic or corrosive chemi-
cals, or inefficient cleaning agents.

The height of dairy cleaning
perfection is attained only by Wy-
andotte Dairyman's Cleaner and
Cleanser, the one cleaning agent
now used by eighty per cent of the
Buttermakers, and by thousands of
Dairymen, Milk Dealers, Farmers.

makes modern dairy history really and
truly modern. In composition and in
cleaning results it is as superior to old
fashioned cleaning agents as is modern
machinery to those types found in
ancient history. And like modern
machinery it does more work and bet-
ter cleaning in less time and with less
effort than other dairy cleaning mat-
erials.

Furthermore, it costs you no more to
use Wyandotte Dairyman's Cleaner and
Cleanser than what you now use. It
is decidedly to your profit to phone or
ask your dealer for a sack or to write
your supply man for a keg or barrel.

Why not do it today?
