Dec 2, 2009

DURHAM, N.H. – In response to industry demands, the University of New Hampshire department of computer science is launching a new software systems engineering certificate program. The program begins Feb. 1, 2010; registration is open now.

This certificate program is for talented engineers who would like to transition into higher-value software systems engineering positions such as software system engineer, software architect, chief engineer, technical director, and lead system engineer.

“Engineers who are successful at this ‘big picture’ work are rare, yet the demand for these skills is high,” says Phil Hatcher, professor and chair of the computer science department at UNH. “Graduates of this certificate program will be attractive candidates for senior technical positions in the software industry in New Hampshire and beyond.”

The certificate requires four courses for completion; courses can be transferred to an Master of Science program. To register, or for more information, go to http://www.cs.unh.edu/certificate.htm.

The University of New Hampshire, founded in 1866, is a world-class public research university with the feel of a New England liberal arts college. A land, sea, and space-grant university, UNH is the state's flagship public institution, enrolling 12,200 undergraduate and 2,200 graduate students.
