

# THE WMUR GRANITE STATE POLL

## THE UNIVERSITY OF NEW HAMPSHIRE SURVEY CENTER

### CONSUMER CONFIDENCE IN NEW HAMPSHIRE STILL BLEAK

February 10, 2010

By: Andrew E. Smith, Ph.D.  
 UNH Survey Center

 603/862-2226

DURHAM, NH – Consumer confidence in New Hampshire remains low, but pessimism about the New Hampshire and national economy is abating somewhat.

These findings are based on the latest **WMUR Granite State Poll**,\* conducted by the University of New Hampshire Survey Center. Five hundred (500) randomly selected New Hampshire adults were interviewed by telephone between January 27 and February 3, 2010. The margin of sampling error for the survey is +/- 4.4 percent.

#### N.H. Business Conditions

While New Hampshire has not suffered as severely as most of the country, and as the economy appears to be pulling out of the recession, Granite Staters are becoming less pessimistic about business conditions in the state. When asked how they think New Hampshire businesses will do over the next year, 33% think they will have good times financially, 40% think they will experience bad times, and 26% foresee mixed conditions. This measure is unchanged since October, but significantly better than one year ago.

**Business Conditions in NH – Next 12 Months**

\* We ask that this copyrighted information be referred to as *the Granite State Poll*, sponsored by WMUR-TV, and conducted by the University of New Hampshire Survey Center.

## U.S. Business Conditions

New Hampshire consumers are also somewhat less pessimistic about the economic outlook for the country as a whole than they have been for the past two years, although they remain largely pessimistic. Currently, only 27% of adults in New Hampshire think the country as a whole is in for good times financially over the next 12 months, 44% think the country will have bad times, and 29% think the conditions will be mixed.

However, Granite Staters are somewhat more pessimistic about the long-term prospects for the U.S. economy than they have been in recent months. Only 27% of New Hampshire residents believe that the U.S. economy will enjoy continuous good times over the next 5 years, 50% expect periods of widespread unemployment and depression, and 22% see a mix of good and bad conditions.

## U.S. 5 Year Economic Outlook

## Personal Financial Conditions

When asked about their personal financial situation, only 15% of New Hampshire residents say they are better off now than they were a year ago, 49% say they are worse off, and 36% say things are about the same. This measure has been relatively unchanged for the past year.

### Household Financial Condition – Compared to 1 Year Ago

Turning to their future household finances, most people in New Hampshire think they will be in about the same financial shape next year as they are today. Currently, 24% think their family will be better off financially a year from now, 20% think they will be worse off and 57% think they will be about the same.

### Household Financial Condition – 12 Months from Now

The one piece of good news in this survey is that New Hampshire adults increasingly think that this is a good time to purchase major household items. Currently, 45% of Granite stater think now is a good time to buy major household items, 35% think it is a bad time, and 20% think it depends on a person's finances.

### Good Time to Buy Major Household Item?

### Subgroup Analysis

There are few demographic differences in the economic expectations of New Hampshire residents as most demographic groups continue to be quite pessimistic. In recent years, Republicans and conservatives were consistently more optimistic about current and future economic conditions in New Hampshire and the U.S. than were Democrats and liberals. However, Democrats are now somewhat more optimistic about the economy than are Republicans.

### Granite State Poll Methodology

These findings are based on the latest WMUR Granite State Poll, conducted by the University of New Hampshire Survey Center. Five hundred (500) randomly selected New Hampshire adults were interviewed by telephone between January 27 and February 3, 2010. The margin of sampling error for the survey is +/- 4.4 percent.

The data have been weighted to adjust for numbers of adults and telephone lines within households, respondent sex, and region of the state. In addition to potential sampling error, all surveys have other potential sources of non-sampling error including question order effects, question wording effects, and non-response.

### Business Conditions in New Hampshire in 12 Months

"Turning to business conditions in the New Hampshire as a whole – do you think that during the next twelve months we'll have good times financially, or bad times, or what?"
