Poorer Working Families With Young Children Are Unlikely to Afford Child Care

Robert Paul Hartley, Marybeth J. Mattingly, and Christopher Wimer

Low-income families with working parents face significant burdens paying for child care, which can function as a barrier to work and often means parents must rely on child care arrangements that are less formal and less stable. Amid national concerns about the high cost of child care, it is important to keep this issue at the forefront. Given the especially high costs of care for very young children, this snapshot highlights the child care costs faced by families with a child under age 3. Figure 1 shows the share of families paying for child care (bottom sections) by their income level. As a family’s income-to-poverty ratio rises, they are more likely to pay for child care. Poorer families who do pay for child care are much more often paying over 7 percent of their income on child care, the current benchmark of affordability from the U.S. Department of Health and Human Services.

FIGURE 1. CHILD CARE COSTS PAID BY WORKING FAMILIES WITH CHILDREN UNDER AGE 3

Poorer working families with children under age 3 pay, on average, over \( \frac{1}{4} \) of their total income on child care.
