

THE GRANITE STATE POLL

THE UNIVERSITY OF NEW HAMPSHIRE SURVEY CENTER

CONSUMER CONFIDENCE AT AN ALL-TIME LOW IN NEW HAMPSHIRE

February 19, 2009

By: Andrew E. Smith, Ph.D.
 UNH Survey Center
www.unh.edu/survey-center
 603/862-2226

DURHAM, NH – Consumer confidence in New Hampshire is at record lows and residents have become increasingly pessimistic about both the state’s and the country’s economic outlook.

These findings are based on the latest **Granite State Poll**,* conducted by the University of New Hampshire Survey Center. Six hundred nineteen (619) randomly selected New Hampshire adults were interviewed by telephone between February 5 and February 9, 2009. The margin of sampling error for the survey is +/-3.9 percent.

U.S. Business Conditions

Economists have long known that consumer confidence in the future of the economy is a leading indicator of the direction of the country’s economy. In New Hampshire, concerns about the future of the US economy jumped in April, six months before the banking crisis and the subsequent drop in the stock market. Currently, only 9% of New Hampshire adults think that the country as a whole is in for good times financially in the next twelve months, 81% think the country will have bad times, and 9% think conditions will be mixed. The percentage thinking the US in in for bad economic times is at a record high as measured in the Granite State Poll.

U.S. Business Conditions in Next 12 Months

Granite Staters are also as pessimistic as they ever have been about the long-term direction of the U.S. economy. Only 22% of New Hampshire residents believe that the U.S. economy will enjoy continuous good times over the next 5 years, 53% expect periods of widespread unemployment and depression, and 26% see a mix of good and bad conditions. This marks the first time a majority have viewed the long term economic outlook for the country as negative.

* We ask that this copyrighted information be referred to as *the Granite State Poll*, conducted by the University of New Hampshire Survey Center.

U.S. 5 Year Economic Outlook

N.H. Business Conditions
 Granite stater are also more pessimistic about the state economy than they ever have been. Looking at economic conditions in New Hampshire, only 13% think New Hampshire will enjoy good economic times over the next twelve months, 71% think the New Hampshire economy is in for bad times, and 15% foresee mixed conditions.

Business Conditions in NH – Next 12 Months

Personal Financial Conditions

Thinking about their personal financial situation, only 12% of New Hampshire residents say they are better off now than they were a year ago, 58% say they are worse off, and 30% say things are about the same. The percentage of New Hampshire adults who say they are better off has steadily declined over the past year.

Household Financial Condition – Compared to 1 Year Ago

When asked how they expect their household finances will be next year, most people in New Hampshire continue to think they will be in about the same financial shape as they are today. However, the percentage with a positive view of their finances one year from now has slowly been increasing since July of 2008, an indication that many in New Hampshire believe that the economy has turned the corner. Currently, 24% think their families will be better off financially a year from now, 19% think they will be worse off and 56% think they will be about the same.

Household Financial Condition – 12 Months from Now

Retailers, desperately seeking to attract business, have been cutting prices on many consumer goods. This has led many in the state to think that now is a good time to purchase major household items like furniture and appliances. Currently, 40% of Granite states think it is a good time to buy major household items, 37% think it is a bad time, and 23% think it depends on a person's finances. This indicator of consumer spending has improved significantly since September.

Good Time to Buy Major Household Item?

Subgroup Analysis

There are few demographic differences in the economic expectations of New Hampshire residents as most demographic groups continue to be quite pessimistic. In recent years, Republicans and conservatives were consistently more optimistic about current and future economic conditions in New Hampshire and the U.S. than were Democrats and liberals. However, the pessimism regarding economic outlooks has been universal across ideological lines since summer of 2008.

Granite State Poll Methodology

These findings are based on the latest **Granite State Poll** conducted by the University of New Hampshire Survey Center. Six hundred nineteen (619) randomly selected New Hampshire adults were interviewed by telephone between February 5 and February 9, 2009. The margin of sampling error for the survey is +/-3.9 percent.

The data have been weighted to adjust for numbers of adults and telephone lines within households, respondent sex, and region of the state. In addition to potential sampling error, all surveys have other potential sources of non-sampling error including question order effects, question wording effects, and non-response.
