CONSUMER CONFIDENCE IN NH AT NEW LOWS

By: Andrew E. Smith, Ph.D.
 UNH Survey Center
 603/862-2226
www.unh.edu/survey-center

DURHAM, NH – Consumer confidence in New Hampshire has dropped dramatically in recent months and residents are increasingly worried about their household finances. New Hampshire consumers are pessimistic about the direction of the U.S. and New Hampshire economy and believe both will be worse off in the coming year.

These findings are based on the latest **Granite State Poll**,* conducted by the University of New Hampshire Survey Center. Five hundred (500) randomly selected New Hampshire adults were interviewed by telephone between April 25 and April 30, 2008. The margin of sampling error for the survey is +/-4.4 percent.

U.S. Business Conditions

Increasing gas and food prices, coupled with a weak housing market has led New Hampshire residents to be very pessimistic about U.S. economic prospects for the next year. Only 12 percent of New Hampshire adults believe the U.S. will experience good economic times in the next 12 months, 70 percent think we will have bad times, and 19 percent think things will be mixed. The percentage that believe the U.S. will see good economic times is at its lowest since the Granite State began measuring consumer confidence.

U.S. Business Conditions in Next 12 Months

Granite Staters are also very pessimistic about the long-term outlook for the U.S. economy. Only 23 percent of New Hampshire residents believe that the U.S. economy will experience continuous good times over the next 5 years, 41 percent expect periods of widespread unemployment and depression, and 36 percent see a mix of good and bad conditions.

* We ask that this copyrighted information be referred to as *the Granite State Poll*, conducted by the University of New Hampshire Survey Center.

U.S. 5 Year Economic Outlook

N.H. Business Conditions

Turning to economic conditions in New Hampshire, only 15 percent of adults think New Hampshire will have good times economically in the next twelve months, 62 percent feel there will be bad times, and 23 percent foresee mixed conditions. Negative perceptions for the New Hampshire economy are at their highest level since this indicator has been measured by the Granite State Poll and have continued to decline in recent months.

Business Conditions in NH – Next 12 Months

Personal Financial Conditions

When asked about their personal financial situation, only 20 percent of Granite Staters say they are better off now than they were a year ago, 53 percent say they are worse off, and 27 percent say things are about the same.

Household Financial Condition – Compared to 1 Year Ago

Asked about how their family finances will be next year, most people in New Hampshire think they will be in about the same financial shape as they are today. However, only 20 percent of New Hampshire residents believe they will be better off financially a year from now, 31 percent think they will be worse off and 49 percent think they will be about the same. This is the first time that more New Hampshire residents have been pessimistic about their family's financial outlook than have been optimistic.

Household Financial Condition – 12 Months from Now

When asked about making major household purchases, only 28 percent of New Hampshire adults feel that it is a good time to buy things such as furniture and appliances, 56 percent think it is a bad time, and 16 percent think it depends. This measure of consumer optimism is also at its lowest level since the Granite State Poll began in 2001 and continues to worsen, a bad sign for retailers in coming months.

Good Time to Buy Major Household Item?

Subgroup Analysis

There are few demographic differences in the economic expectations of New Hampshire residents as most demographic groups are quite pessimistic. Younger adults are more likely to say they expect to be better off a year from now than are older adults, many of whom have recently retired or expect to retire soon.

In recent years, Republicans and conservatives were consistently more optimistic about current and future economic conditions in New Hampshire and the U.S. than were Democrats and liberals. This has changed in the most recent poll as both Republicans and conservatives are now pessimistic about their personal finances as well larger economy.

Granite State Poll Methodology

These findings are based on the latest **Granite State Poll** conducted by the University of New Hampshire Survey Center. Five hundred (500) randomly selected New Hampshire adults were interviewed by telephone between April 25 and April 30, 2008. The margin of sampling error for the survey is +/-4.4 percent.

The data have been weighted to adjust for numbers of adults and telephone lines within households, respondent sex, and region of the state. In addition to potential sampling error, all surveys have other potential sources of non-sampling error including question order effects, question wording effects, and non-response.
