

THE GRANITE STATE POLL

THE UNIVERSITY OF NEW HAMPSHIRE

LYNCH JOB APPROVAL NEARS 80% – MAINTAINS WIDE LEAD IN GOV. RACE

August 3, 2006

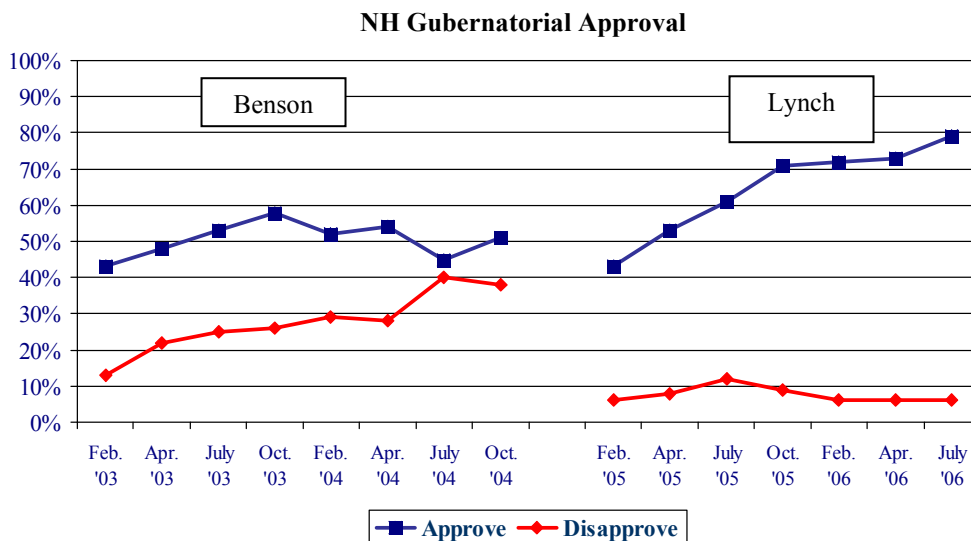

By: Andrew E. Smith, Ph.D.
 UNH Survey Center
www.unh.edu/survey-center
 603/862-2226

DURHAM, NH – New Hampshire Governor John Lynch’s job approval rating has soared to 79 percent. Lynch continues to hold a commanding lead over his Republican opponent, Jim Coburn, in the race for New Hampshire Governor.

These findings are based on the latest **Granite State Poll**,* conducted by the University of New Hampshire Survey Center. The Granite State Poll is sponsored by the University of New Hampshire. Five hundred ten (510) randomly selected New Hampshire adults were interviewed by telephone between July 21 and July 31, 2006. The margin of sampling error for the survey is +/-4.3 percent.

Gubernatorial Approval

John Lynch’s approval rating as New Hampshire Governor has reached unprecedented levels in the run up to the November reelection. In the most recent Granite State Poll, 79 percent of New Hampshire adults say they approve of the job Lynch has done as governor, only 6 percent disapprove, and 15 percent are neutral. “Lynch’s approval ratings are in the stratosphere. Only President George W. Bush, in the aftermath of September 11th, has reached these levels of job approval in New Hampshire” said Andrew Smith, Director of the UNH Survey Center.

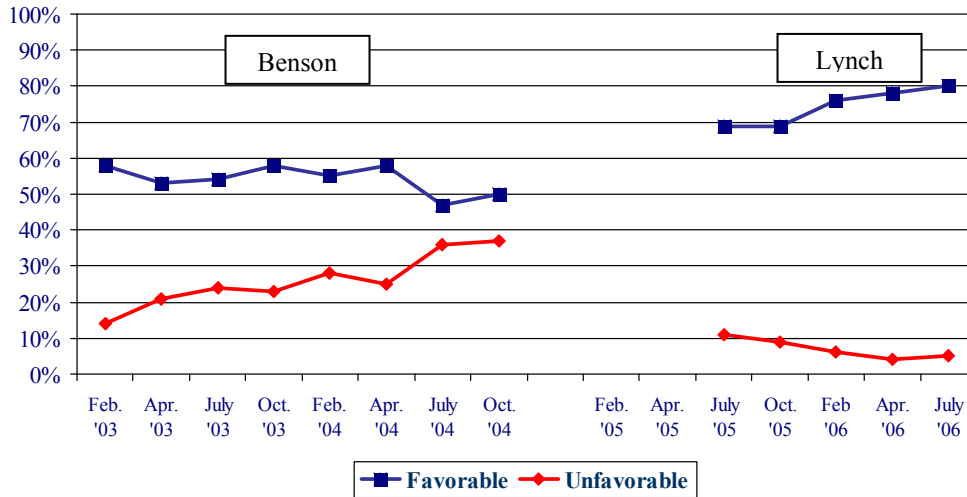

Lynch gets very high job approval ratings from all political groups – 87 percent of Democrats approve of the job Lynch is doing as governor, 75 percent of Republicans, approve, and 74 percent of Independents. Among self-identified Liberals, 94 percent approve of the job Lynch is doing as governor, 81 percent of moderates approve, and even 74 percent of Conservatives approve.

* We ask that this copyrighted information be referred to as *the Granite State Poll*, sponsored by the University of New Hampshire.

Favorability Ratings

Lynch's personal favorability rating is also very high. In the latest Granite State Poll, 80 percent of New Hampshire residents say they have a favorable opinion of Lynch, only 5 percent have an unfavorable opinion, 8 percent are neutral, and 7 percent say they don't know enough about him to say. Lynch's net favorability rating, the percentage having a favorable opinion minus the percentage having an unfavorable opinion, is an incredibly high +75 percent.

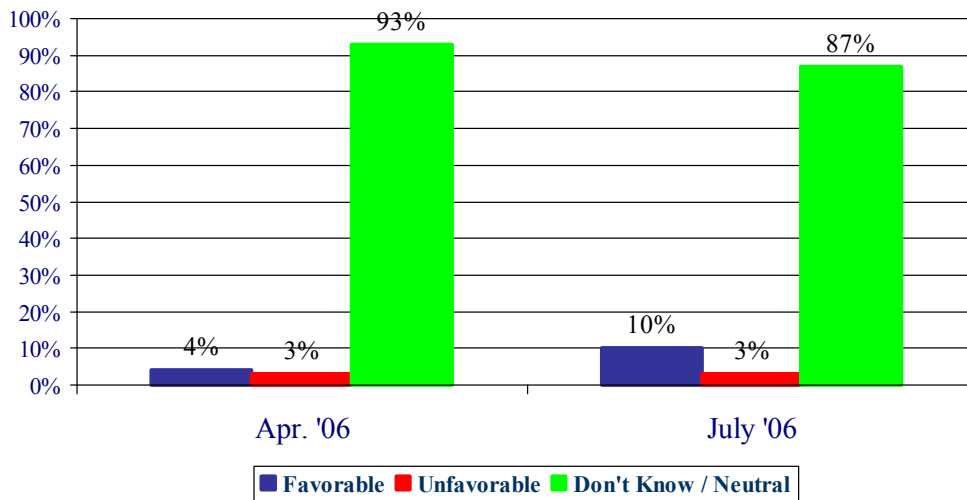

Favorability Ratings – NH Governor

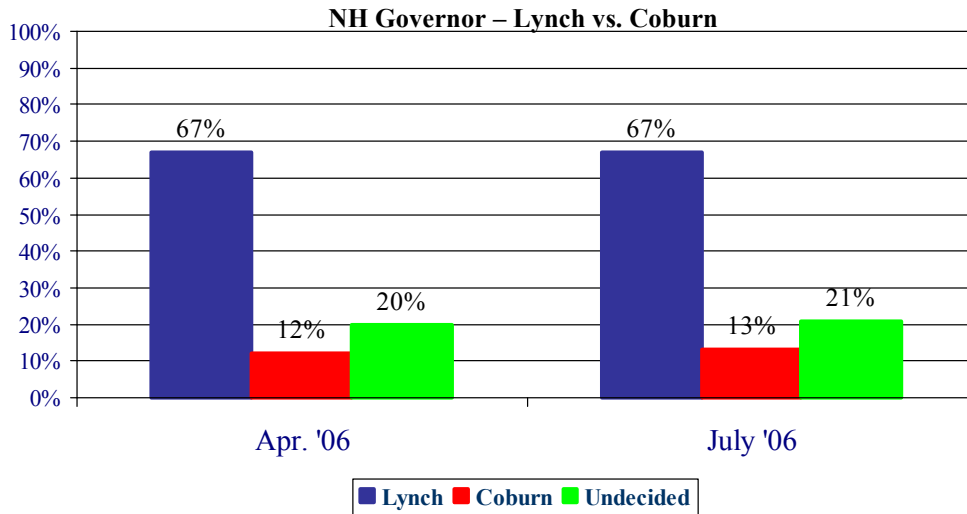

November Gubernatorial Election

Lynch's Republican opponent in November, State Representative Jim Coburn, remains unknown to most people in New Hampshire – only 10 percent of Granite Staters have a favorable opinion of Coburn, 3 percent have an unfavorable opinion of him, 8 percent are neutral, and 79 percent don't know enough about Coburn to say.

Favorability Ratings – Jim Coburn

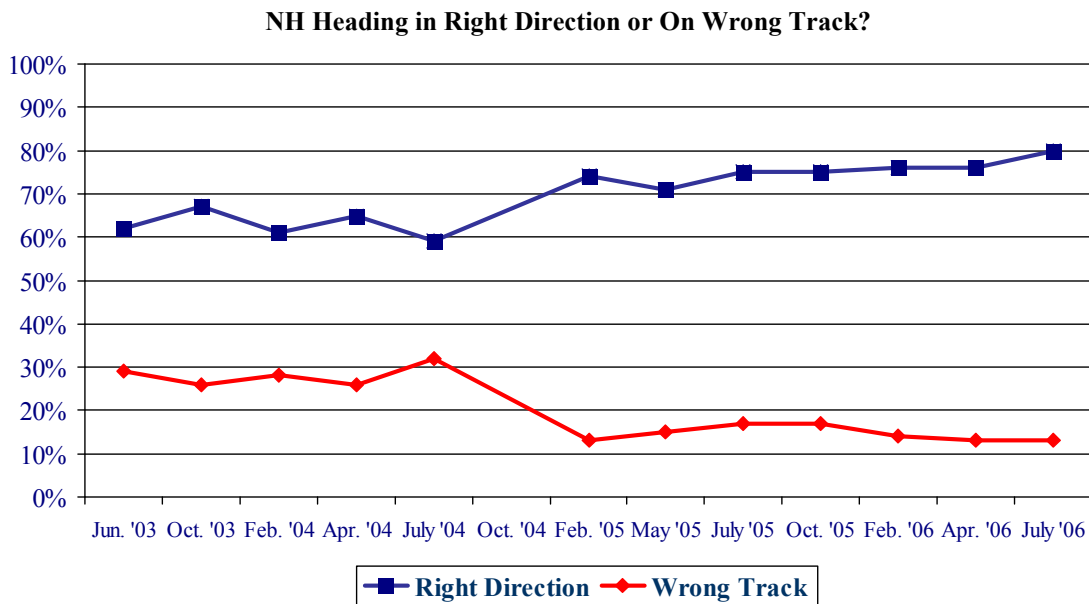

Lynch's high popularity and job approval, combined with Coburn's lack of name recognition, produce a wide lead for Lynch. Currently, 67 percent of likely voters say they will vote for Lynch, 13 percent say they will vote for Coburn, and 20 percent are undecided. Coburn has already put political ads on television, but these have had little impact as Lynch's lead over Coburn has remained unchanged since April.

Right Direction or Wrong Track?

Granite Staters remain extremely optimistic about the future of New Hampshire. Eighty percent think things in New Hampshire are generally going in the right direction, only 13 percent think things are seriously off on the wrong track, and 8 percent say they don't know. This indicator of optimism about the state has remained at high levels over the past year.

Granite State Poll Methodology

These findings are based on the most recent Granite State Poll conducted by the University of New Hampshire Survey Center from July 21 and July 31, 2006. A random sample of 510 New Hampshire adults was interviewed by telephone. In 95 of 100 cases, the statewide estimates will be accurate to plus or minus 4.3 percent. Results reported for other subgroups have potential for somewhat larger variation than those for the entire population.

The data have been weighted to adjust for numbers of adults and telephone lines within households, respondent sex, and region of the state. In addition to potential sampling error, all surveys have other potential sources of non-sampling error including question order effects, question wording effects, and non-response.
