FOR RELEASE
March 3, 2004

DURHAM, NH – Consumer confidence is inching up as the New Hampshire economy continues to improve. Confidence in the New Hampshire economy is at its highest level in almost two years. These findings are based on the latest Granite State Poll, conducted by the University of New Hampshire Survey Center. The Granite State Poll is sponsored by the University of New Hampshire. Five hundred eleven (511) randomly selected adults were interviewed by telephone between February 4 and February 12, 2004. The margin of sampling error for the survey is +/-4.3 percent. (For more detailed results, visit the Survey Center web site at www.unh.edu/survey-center and click on Press Releases.)

U.S. Business Conditions

The U.S. and New Hampshire economies continue to expand, factory production is up, and unemployment is declining and people in New Hampshire are becoming increasingly optimistic about their economic future. In the most recent Granite State Poll, over half of New Hampshire residents (53%) say they expect businesses in the U.S. will experience good times in the next 12 months, 31 percent anticipate bad times for U.S. businesses, and 16 percent think conditions will be mixed. The percentage of NH residents who think the U.S. economy will experience good times is at its highest level since the start of the 2001 recession.

However, Granite Staters are somewhat less expectant concerning the long-term prospects for the U.S. economy. Only 39 percent of New Hampshire residents believe that the U.S. economy will experience continuous good times over the next 5 years, 39 percent expect periods of widespread unemployment and depression, and 22 percent see a mix of good and bad conditions.

“Improving consumer confidence typically is good news for incumbents. Both Governor Benson and President Bush should benefit by perceptions of economic growth,” said Andrew Smith, Director of the UNH Survey Center.

N.H. Business Conditions

Turning to business conditions in New Hampshire, New Hampshire residents are also becoming more optimistic. When asked their expectations about business conditions in New Hampshire over the next 12 months, 54 percent of adults think New Hampshire will have good times economically, 29 percent feel there will be bad times, and 17 percent foresee mixed conditions. Optimism about business conditions in New Hampshire has risen steadily over the past year.

Personal Financial Conditions

When asked about their personal financial situations, 34 percent of Granite Staters say they are better off now than they were a year ago, 28 percent say they are worse off, and 38 percent say things are about the same. The percentage of Granite Staters who say they are worse off than they were a year ago has steadily declined over the past year.
When asked to assess their family’s finances a year from now, most people in New Hampshire think their finances will be better or at least the same. Thirty-seven percent of New Hampshire residents believe they will be better off financially a year from now, only 10 percent think they will be worse off and 52 percent think they will be about the same. These figures are largely unchanged over the past year.

When asked about making major household purchases, 58 percent of New Hampshire adults feel that it is a good time to buy things such as furniture and appliances, 28 percent think it is a bad time, and 15 percent think it depends.

**Subgroup Analysis**

There are few demographic differences in the economic expectations of New Hampshire residents, but there are meaningful political differences. Republicans and conservatives are consistently more optimistic about current and future economic conditions than are Democrats and liberals. Younger adults are more likely to say they are better off financially than they were a year ago and that they expect to be better off a year from now than are older adults, many of whom have recently retired or expect to retire soon.

**Granite State Poll Methodology**

These findings are based on the most recent Granite State Poll conducted by the University of New Hampshire Survey Center from February 4 to February 12, 2004. A random sample of 511 New Hampshire adults was interviewed by telephone. In 95 of 100 cases, the statewide estimates will be accurate to plus or minus 4.3 percent. Results reported for other subgroups have potential for somewhat larger variation than those for the entire population. The data have been weighted to adjust for numbers of adults and telephone lines within households, respondent sex, and region of the state. In addition to potential sampling error, all surveys have other potential sources of non-sampling error including question order effects, question wording effects, and non-response.
Business Conditions in U.S. in 12 Months

"Turning to business conditions in the country as a whole – do you think that during the next twelve months we'll have good times financially, or bad times, or what?"
