DURHAM, NH – New Hampshire residents' concern about contracting COVID-19 has increased slightly since June. Trust in science agencies, like the CDC, as a source of information on the virus continues to erode. Granite Staters still express high levels of confidence in the state government's ability to respond to the pandemic but are dubious of the federal government's ability to do the same. Residents are slightly more comfortable participating in public activities than in July. Stark partisan differences endure over concerns about contracting COVID-19, trust in science agencies, and comfort with engaging in public activities.

These findings are based on the latest **Granite State Poll***, conducted by the University of New Hampshire Survey Center. One thousand and nine hundred forty-nine (1,949) Granite State Panel members completed the survey online between August 28 and September 1, 2020. The margin of sampling error for the survey is +/- 2.2 percent. Data were weighted by respondent sex, age, education, and region of the state to targets from the most recent American Community Survey (ACS) conducted by the U.S. Census Bureau, as well as party registration levels provided by the New Hampshire Secretary of State. Granite State Panel members are recruited from randomly-selected landline and cell phone numbers across New Hampshire and surveys are sent periodically to panel members.

Personal Experience with COVID-19

Nearly half of New Hampshire residents (48%) say that they know someone who has contracted COVID-19 while 52% do not know anyone who has. The percentage who know someone who has contracted COVID-19 is largely unchanged since July (47%).

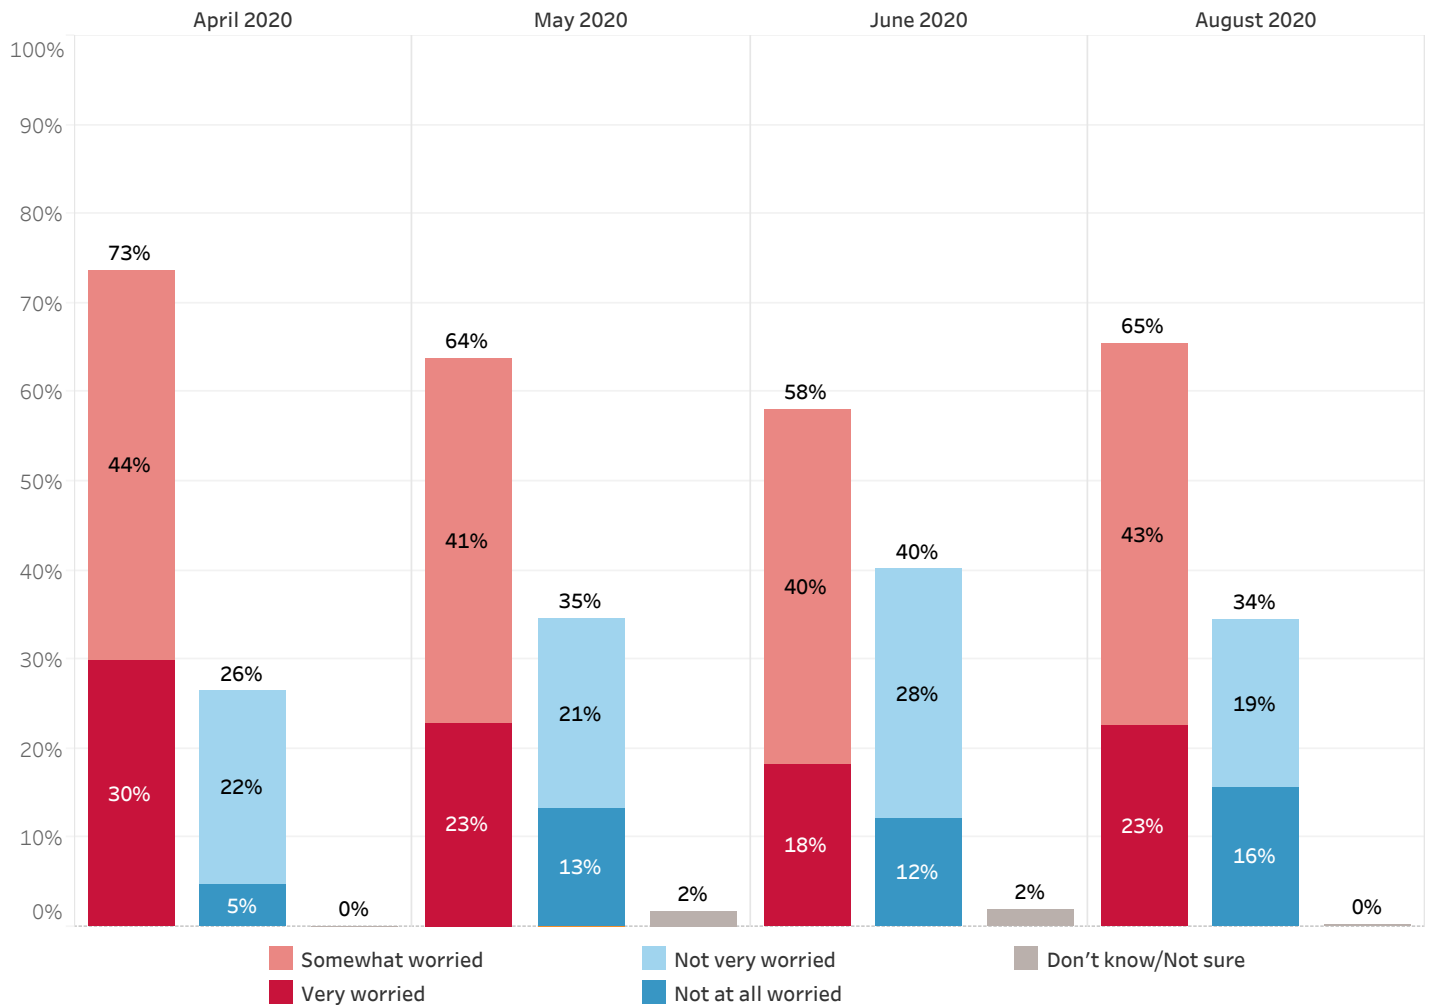

Know Anyone Who Has Contracted COVID-19

* We ask that this copyrighted information be referred to as *the Granite State Poll*, conducted by the University of New Hampshire Survey Center.

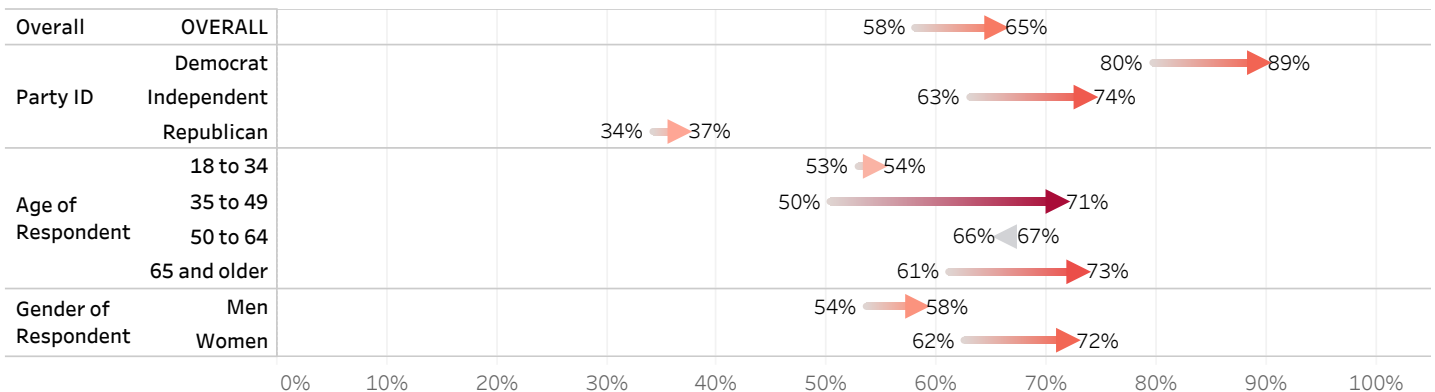

Concern among New Hampshire residents about themselves or an immediate family member contracting COVID-19 has ticked slightly upward since June: 65% of Granite Staters say they are very (23%) or somewhat (43%) worried about this, 34% are not very (19%) or not at all (16%) worried about it, and less than 1% don't know or are unsure.

Worry Self or Someone in Immediate Family Might Contract COVID-19

- Concern about contracting COVID-19 has increased slightly since June among Democrats (+9 percentage points) and Independents (+11) but is largely unchanged and remains far lower among Republicans.
- Respondents aged 35 to 49 (+21) and those aged 65 and older (+12) are more likely than in June to say they are very or somewhat worried about contracting COVID-19.
- Concern about contracting COVID-19 has increased by 10 percentage points among women since June while concern among men has increased by 4 points.

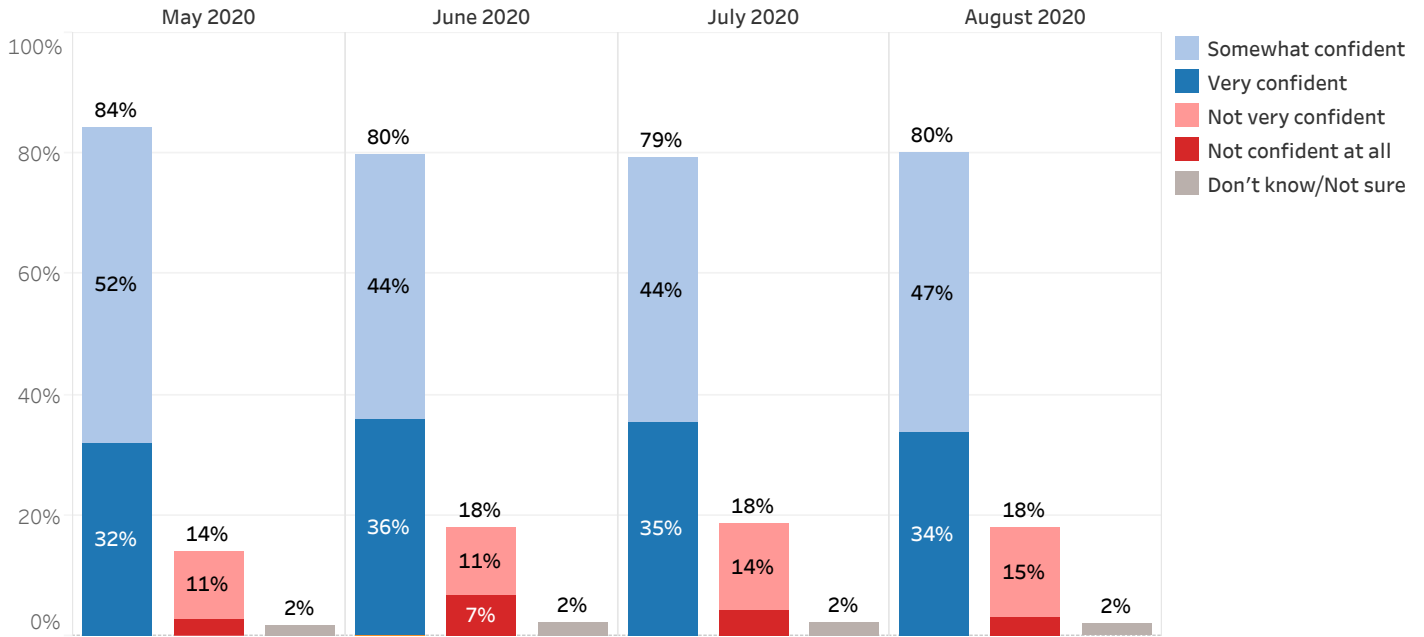

Very or Somewhat Worried Self or Someone in Immediate Family Might Contract COVID-19 - Change from June to August

Trust in Government Handling of COVID-19

A large majority of residents have confidence in the state government's ability to respond effectively to COVID-19 in New Hampshire: 80% are very (34%) or somewhat (47%) confident, 18% are not very (15%) or not at all (3%) confident, and 2% don't know or are unsure. Confidence in the state government's ability to respond to COVID-19 is largely unchanged since May.

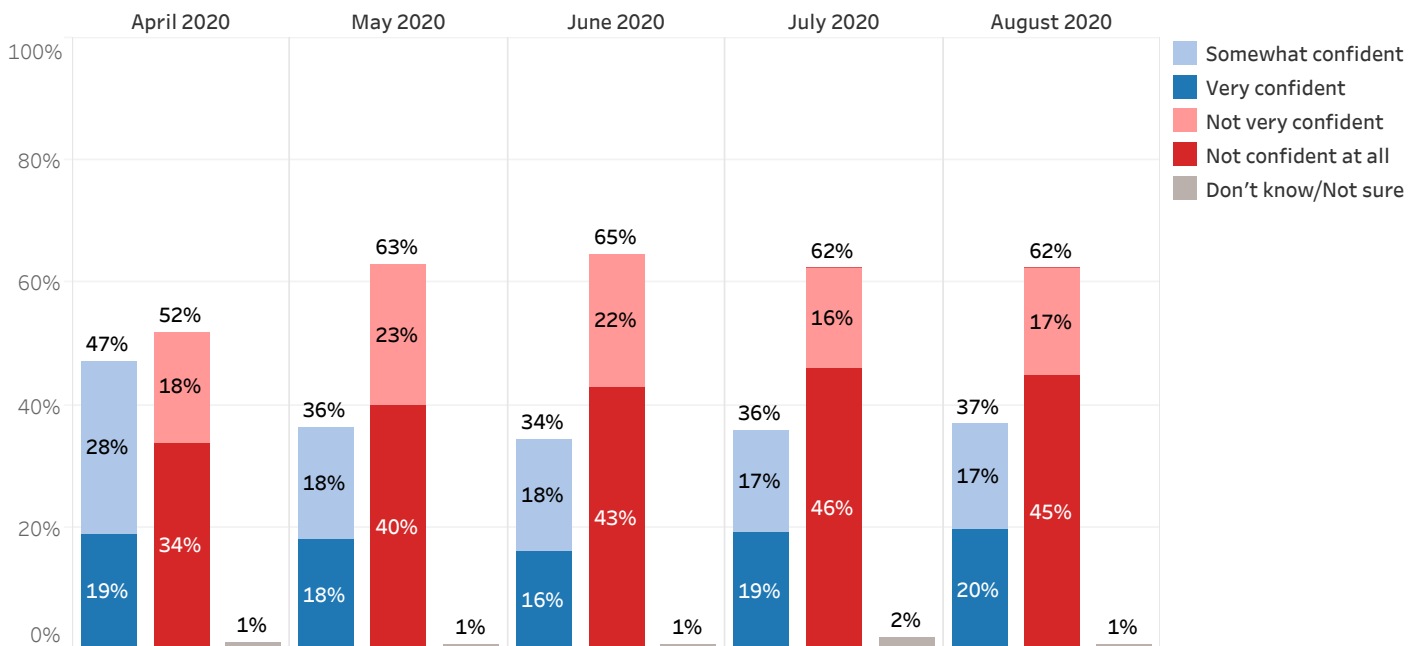

Confidence in State Government's Ability to Respond Effectively to Current Outbreak of Coronavirus in New Hampshire

Granite Staters are far less confident about the federal government's ability to respond to COVID-19: only 37% say they are very (20%) or somewhat (17%) confident in the federal government's ability to respond effectively, 62% are not very (17%) or not confident at all (45%), and 1% don't know or are unsure. Confidence in the federal government's ability to respond to COVID-19 is largely unchanged since May.

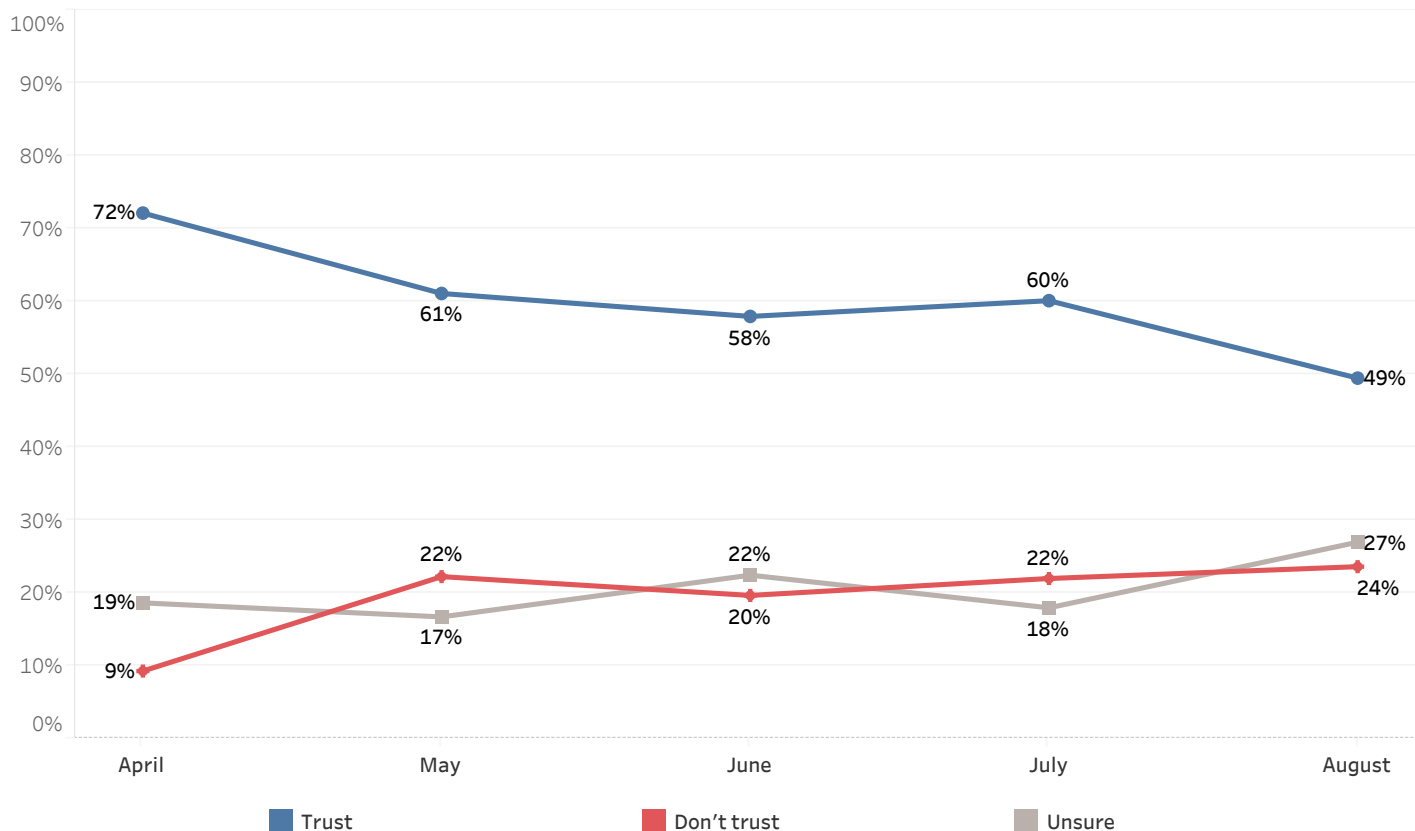

Overall, nearly half (46%) of Granite Staters are confident in the state's ability to respond effectively but are not confident in the federal government's ability to do so. Seventy percent of Democrats feel this way while 70% of Republicans are confident in both the state and federal government.

Confidence in Federal Government's Ability to Respond Effectively to Current Outbreak of Coronavirus in United States

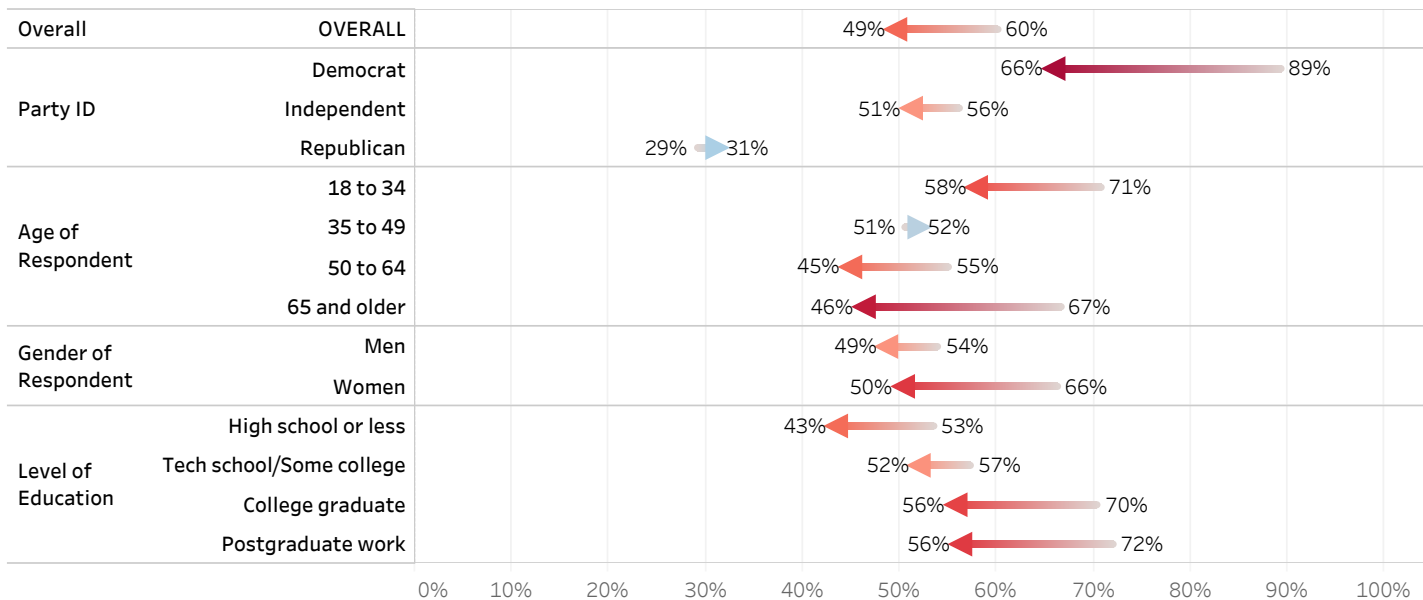

Trust in science agencies such as the Centers for Disease Control (CDC) as a source of information about the coronavirus continues to erode. Just under half (49%) of New Hampshire residents say they trust such agencies as a source of information, 24% do not trust them, and 27% don't know or are unsure.

Trust in Science Agencies as Source of Information on Coronavirus

- Trust in these science agencies as a source of information has fallen considerably among Democrats (-23 percentage points) since July but Democrats (66%) remain more than twice as likely as Republicans (31%) to say they trust these agencies.
- Trust in these agencies has fallen since July among nearly all age groups, most notably among those aged 65 and older (-23).
- Trust in these agencies has fallen since June among all education groups, most notably among college graduates (-14) and among those who have completed postgraduate work (-16).

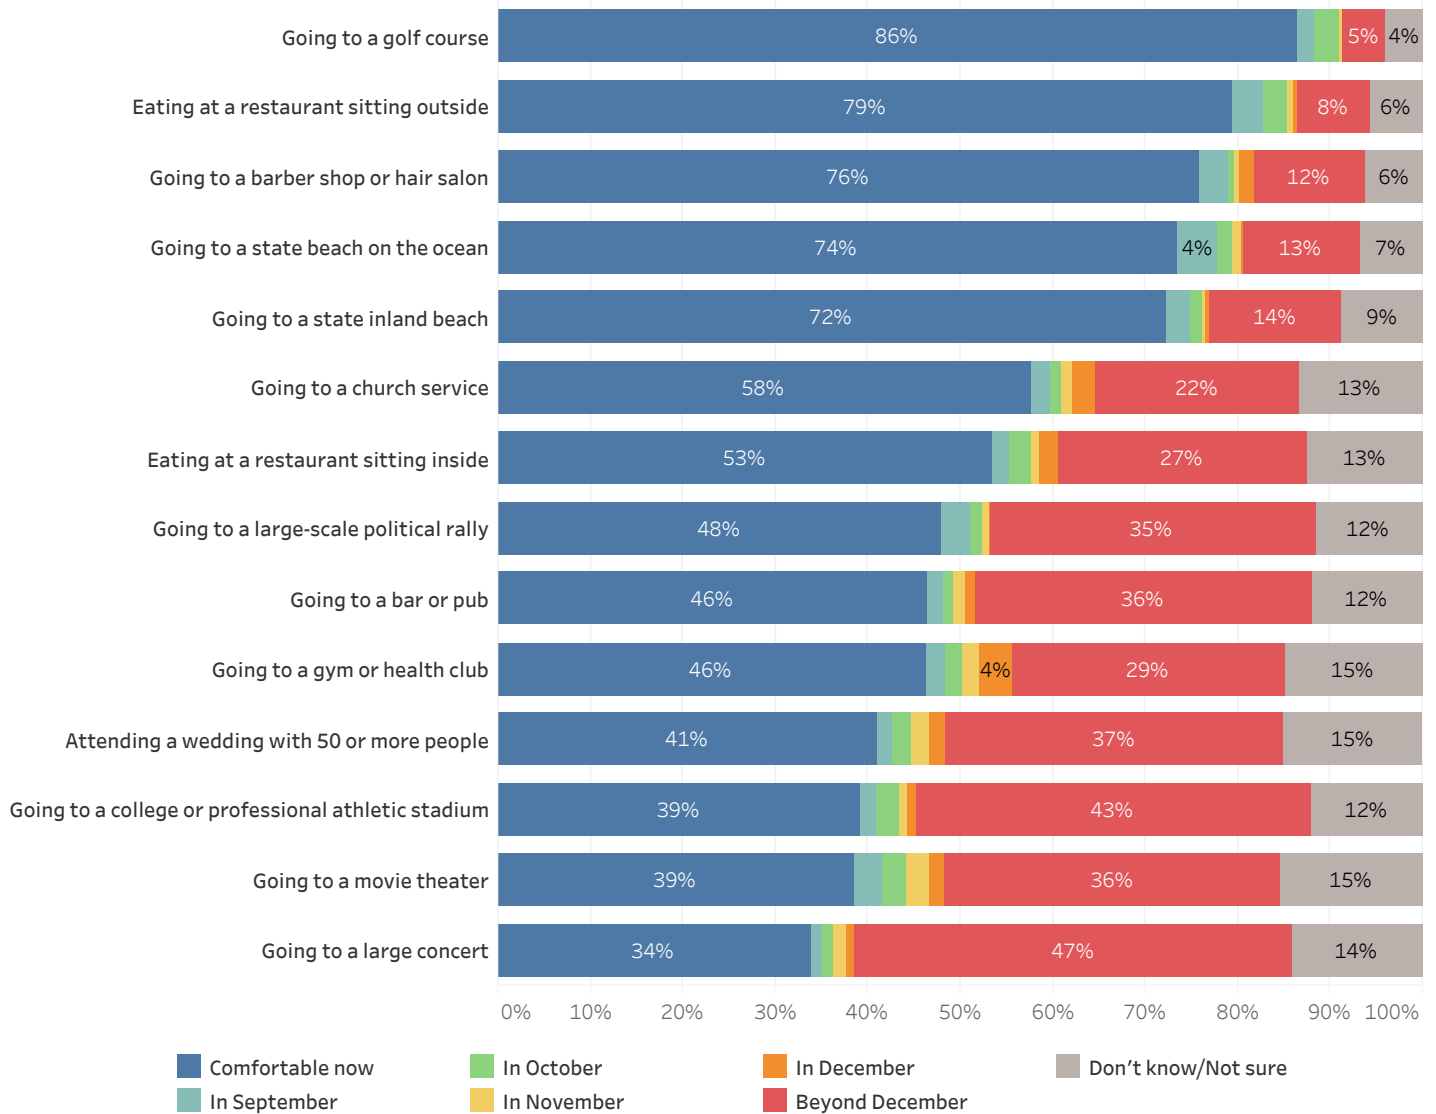

Trust Science Agencies Such as CDC as Source of Information About Coronavirus - Change from July to August

Respondents were also asked when they would be comfortable engaging in several activities outside of their homes that have been curtailed during the COVID-19 outbreak. More than two-thirds of Granite Staters who plan to do these things at some point say they are currently comfortable going to golf course (86%), eating outside at a restaurant (79%), going to a barber shop or hair salon (76%), going to a state beach on the ocean (74%), and going to a state inland beach (72%). Smaller majorities are currently comfortable going to a church service (58%) and eating indoors at a restaurant (53%).

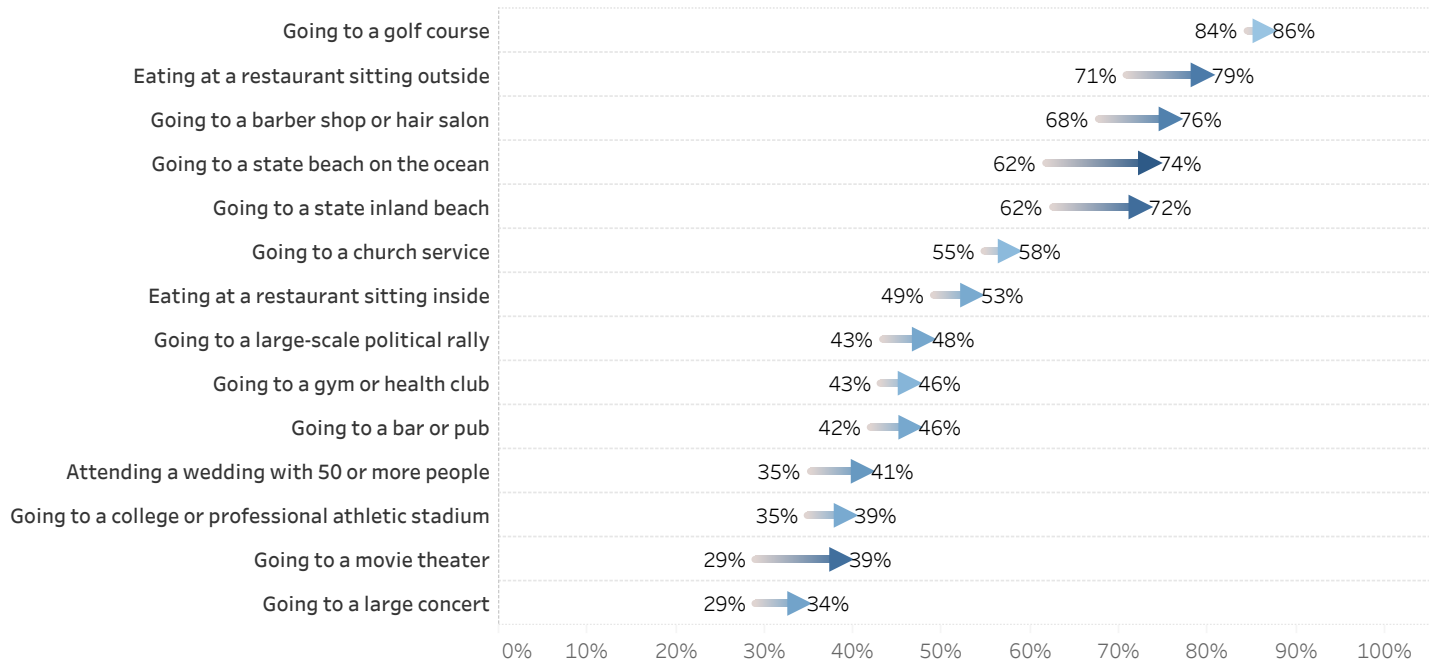

However, less than half of New Hampshire residents are currently comfortable going to a large-scale political rally (48%), going to a bar or pub (46%), going to a gym or health club (46%), attending a wedding with 50 or more people (41%), going to a college or professional athletic stadium (39%), going to a movie theater (39%), or going to a large concert (34%). In general, very few people anticipate becoming comfortable with these activities in the coming months. Indeed, most of those not currently comfortable with participating in these activities indicate that they will not be comfortable doing so until the beginning of next year at the earliest.

When Expect to Feel Comfortable Going to or Doing Following Things

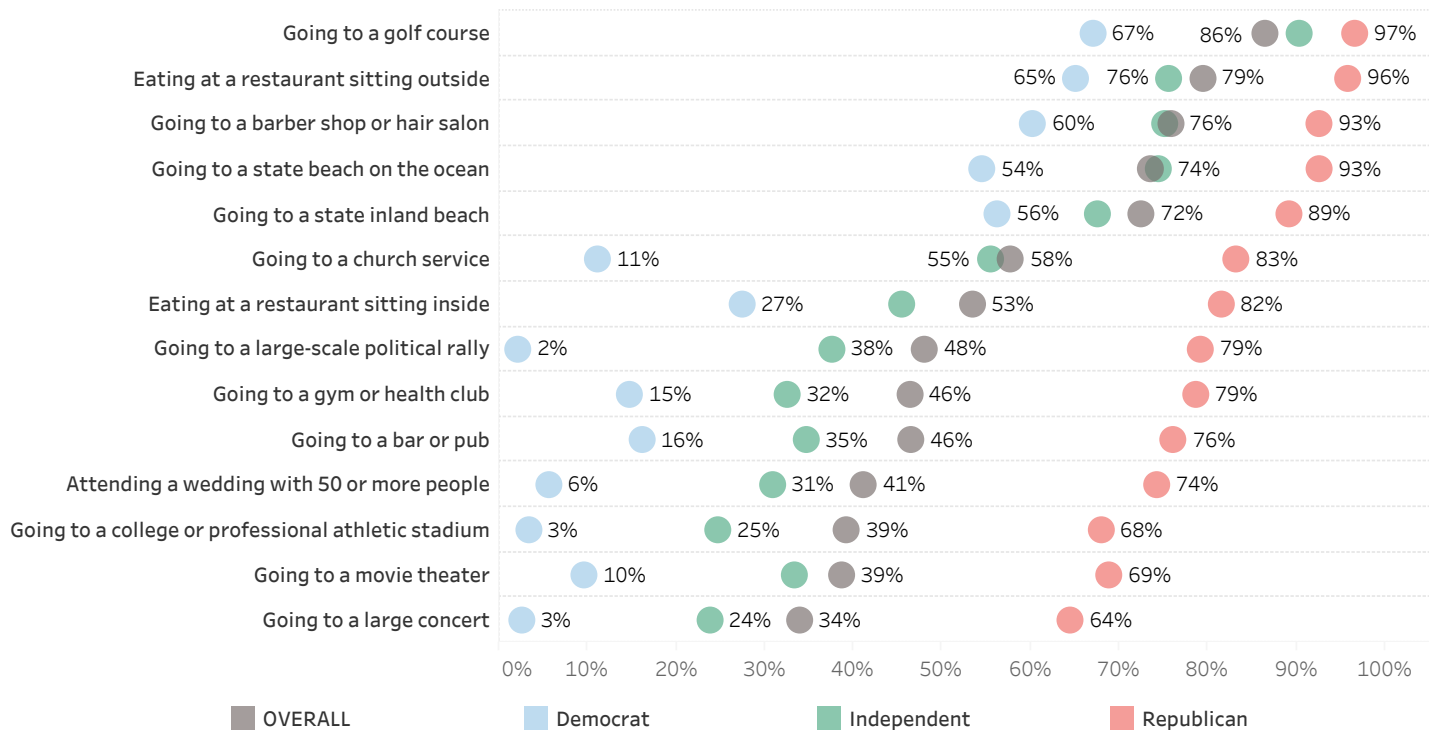

Overall, Granite Staters are slightly more comfortable participating in these activities than they were in July. The percentage who say they are currently comfortable going to a state beach on the ocean (+12 percentage points), going to an inland state beach (+10), going to a movie theater (+10), and eating outside at a restaurant (+8 percentage points) have increased the most since July.

Currently Comfortable Going to or Doing Following Things - Change from July to August

As in earlier months, Democrats and Republicans have very different levels of comfort about participating in these activities. Majorities of Democratic, Independent, and Republican Granite Staters are comfortable going to a golf course, eating outside at a restaurant, going to a barber shop or hair salon, or going to a state beach on the ocean or inland. However, in other areas stark partisan differences persist. Some activities, such as going to a large-scale political rally, attending a wedding with 50 or more people, going to an athletic stadium, or going to a concert are things that few Democrats are currently comfortable doing, but more than six in ten Republicans are comfortable participating in.

Currently Comfortable Going to or Doing Following Things - August 2020 - By Party Identification

Granite State Poll Methodology

These findings are based on the latest Granite State Poll, conducted by the University of New Hampshire Survey Center. One thousand and nine hundred forty-nine (1,949) Granite State Panel members completed the survey online between August 28 and September 1, 2020. The margin of sampling error for the survey is +/- 2.2 percent. These MSE's have not been adjusted for design effect. The response rate for the August 2020 Granite State Poll is 36%. The design effect for the survey is 2.3%.

Data were weighted by respondent sex, age, education, and region of the state to targets from the most recent American Community Survey (ACS) conducted by the U.S. Census Bureau, as well as party registration levels provided by the New Hampshire Secretary of State.

The Granite State Panel is part of an effort by the University of New Hampshire Survey Center to investigate new ways of gathering and understanding the opinion of New Hampshire residents. Approximately 5,500 New Hampshire adults were recruited from randomly selected landline and cell phone numbers to participate in the panel. Panelists are then asked to participate in online surveys sponsored by the UNH Survey Center.

The number of respondents in each demographic below may not equal the number reported in cross-tabulation tables as some respondents choose not to answer some questions. Due to rounding, percentages may not sum to 100%.

For more information about the methodology used in the Granite State Panel, contact Dr. Andrew Smith at (603) 862-2226 or by email at andrew.smith@unh.edu.
