DURHAM, NH - New Hampshire residents are less depressed than they were in December while feelings of anxiety are unchanged. However, those who have not yet been vaccinated are more than twice as likely as those who have been vaccinated to report feelings of anxiety and depression.

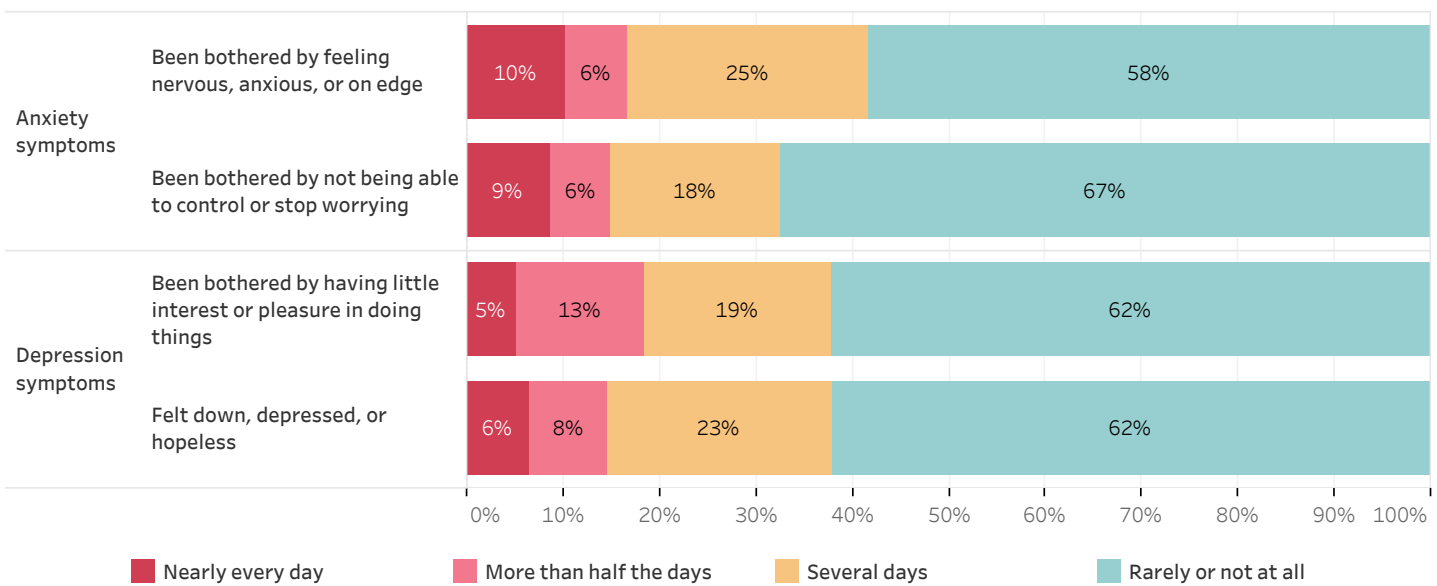

These findings are based on the latest **Granite State Poll\***, conducted by the University of New Hampshire Survey Center. One thousand seven hundred and forty-four (1,744) Granite State Panel members completed the survey online between March 18 and March 22, 2021. The margin of sampling error for the survey is +/- 2.3 percent. Data were weighted by respondent sex, age, education, and region of the state to targets from the most recent American Community Survey (ACS) conducted by the U.S. Census Bureau, as well as party registration levels provided by the NH Secretary of State and 2020 election results in NH. Granite State Panel members are recruited from randomly-selected landline and cell phone numbers across New Hampshire and surveys are sent periodically to panel members.

### Mental Health

Respondents to the Granite State Poll were asked how frequently they have experienced several mental health symptoms over the past two weeks. Seventeen percent say they have been bothered by feeling nervous, anxious, or on edge nearly every day (10%) or more than half the days (6%) in the past two weeks, 25% have felt this way for several days, and 58% have experienced this rarely or not at all. Fifteen percent of Granite Staters say they have been bothered by not being able to control or stop worrying nearly every day (9%) or more than half the days (6%) in the past two weeks, 18% have felt this way for several days, and 67% have experienced this rarely or not at all.

Eighteen percent of New Hampshire residents say they have been bothered by having little interest or pleasure in doing things nearly every day (5%) or more than half the days (13%) in the past two weeks, 19% have felt this way for several days, and 62% have experienced this rarely or not at all. Finally, 15% say they have felt down, depressed, or hopeless nearly every day (6%) or more than half the days (8%) in the past two weeks, 23% have felt this way for several days, and 62% have experienced this rarely or not at all.

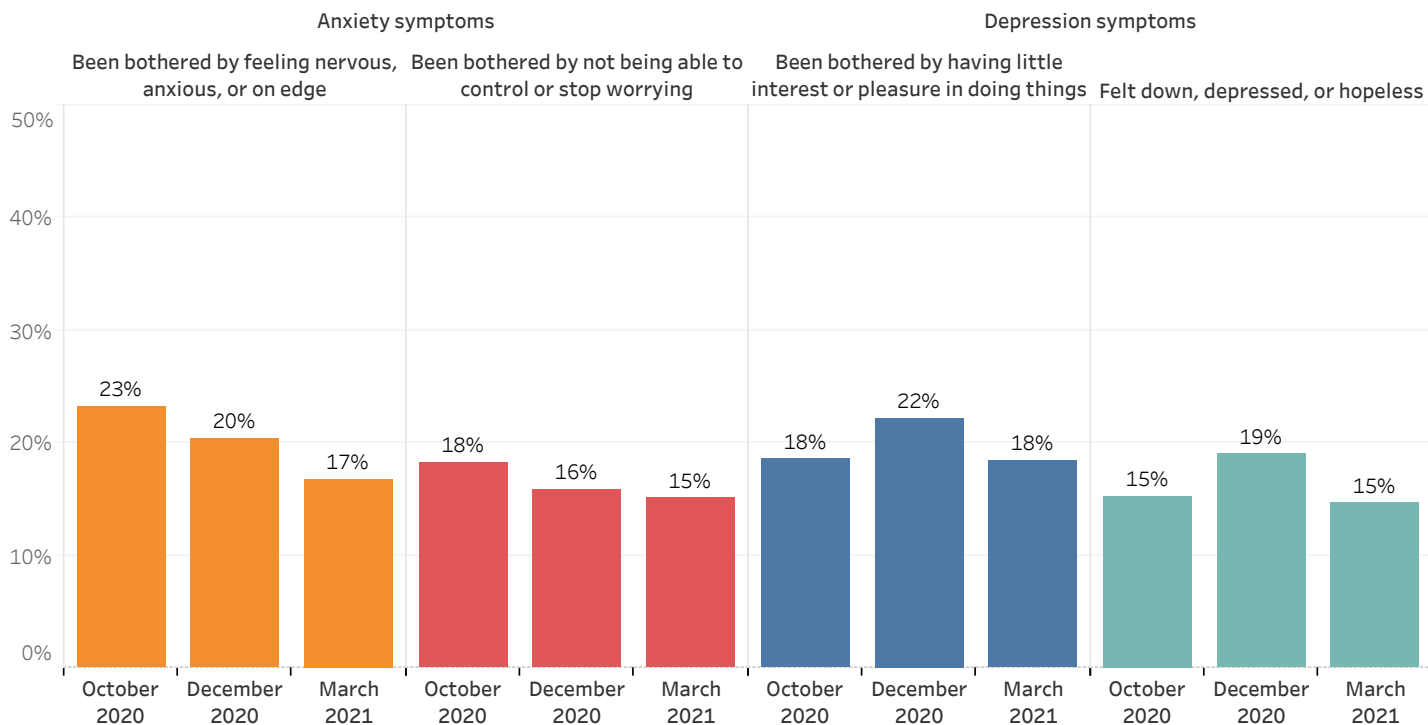

Frequency Feeling the Following Over Last 2 Weeks - March 2021

\* We ask that this copyrighted information be referred to as *the Granite State Panel*, conducted by the University of New Hampshire Survey Center.

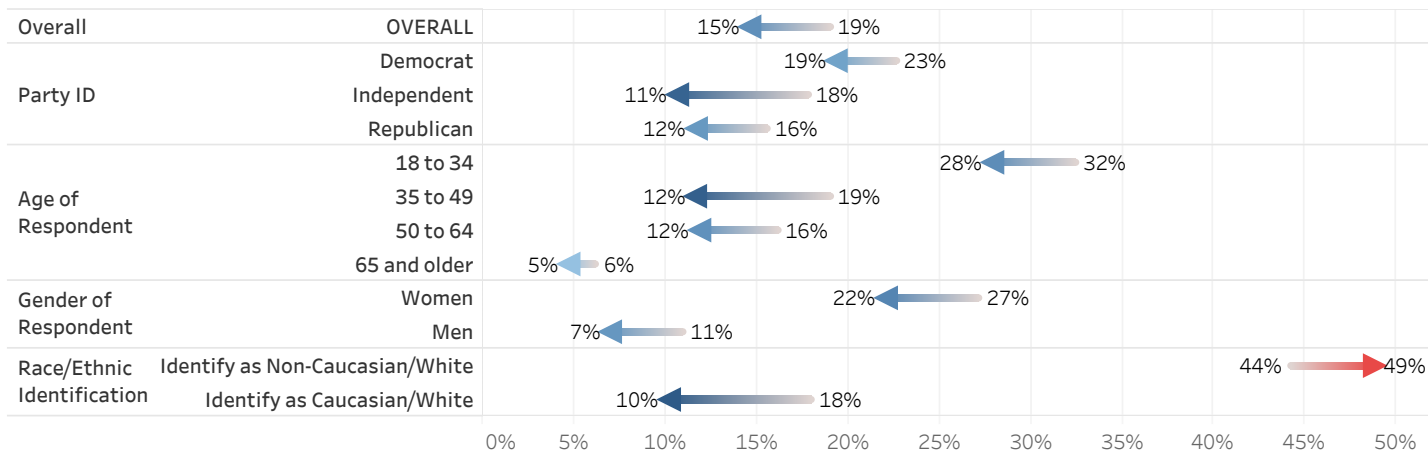

Overall, Granite Staters are less likely than in December to say that for at least half of the days in the past two weeks they have been bothered by having little interest or pleasure in doing things (-4 percentage points), have felt down, depressed, or hopeless (-4), or been bothered by feeling nervous, anxious, or on edge (-3). About the same percentage as in December report feeling bothered by not being able to control or stop worrying (-1) this frequently.

### Felt the Following At Least Half the Days Over Last 2 Weeks

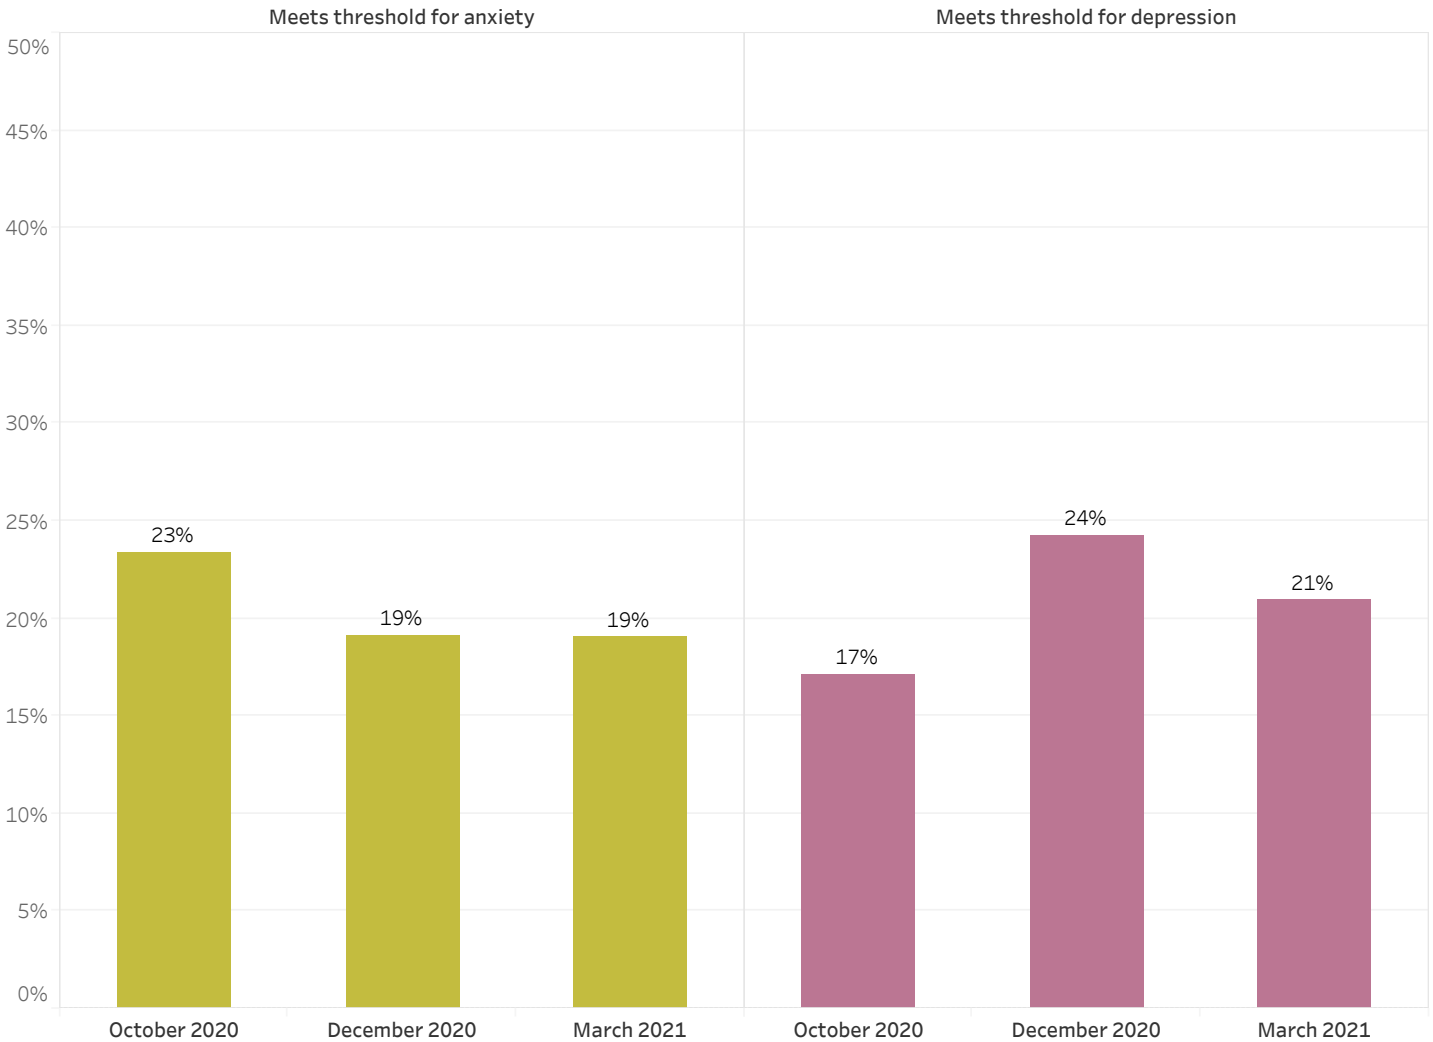

- Independents (-7 percentage points), Democrats (-4), and Republicans (-4) are all slightly less likely than in December 2020 to say they felt down, depressed, or hopeless at least half of the days in the last two weeks. Democrats are slightly more likely than Independents and Republicans to report feeling this way.
- Granite Staters aged 35 to 49 (-7 percentage points) report the largest drop since December 2020 in the percentage who say they felt down, depressed, or hopeless at least half of the days in the last two weeks. Those aged 18 to 34 are a good deal more likely than older people to report feeling this way.
- Men (-4 percentage points) and women (-5) are both very slightly less likely than in December 2020 to say they felt down, depressed, or hopeless at least half of the days in the last two weeks. Women remain a good deal more likely than men to report feeling this way.
- Granite Staters who identify as Caucasian or White are less likely than in December 2020 (-8 percentage points) to say they felt down, depressed, or hopeless at least half of the days in the last two weeks. Those who identify as Non-Caucasian/White are far more likely to report feeling this way.

### Felt Down, Depressed, or Hopeless At Least Half the Days Over Last 2 Weeks - Change from December 2020 to March 2021

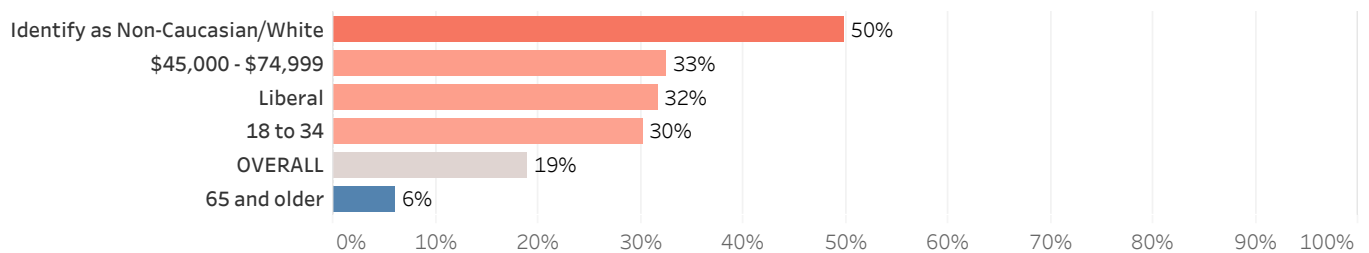

Applying a standard formula based on these responses to screen for generalized anxiety and depressed mood,\* 19% of New Hampshire residents meet the threshold for identifying possible cases of generalized anxiety disorder, unchanged since December (19%), and 21% meet the threshold for depression, down from 24% in December. For comparison, past-year estimates for the prevalence of generalized anxiety and depression at the national level are 3% and 7% respectively.\*\*

### Meet Threshold for Anxiety & Depression

New Hampshire residents who identify as Non-Caucasian/White, those with a household income between \$45,000 and \$74,999, self-described liberals, and those aged 18 to 34 are more likely than others to report feelings that meet the threshold for identifying possible cases of generalized anxiety disorder. Those aged 65 and older are less likely to report feelings meeting the threshold for anxiety.

### Meet Threshold for Anxiety - By Demographics - March 2021

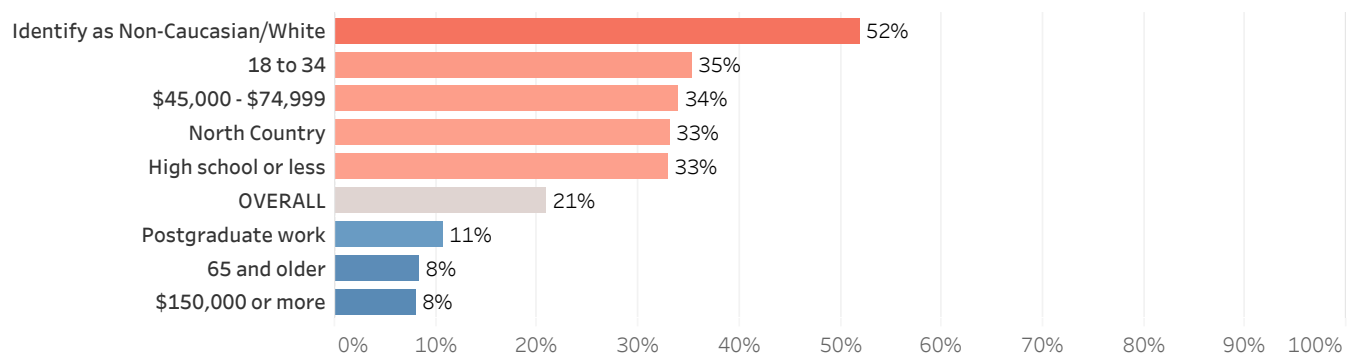

\*Kroenke K, Spitzer RL, Williams JB. The Patient Health Questionnaire-2: Validity of a Two-Item Depression Screener. Medical Care. 2003;41:1284-92.

\*\*<https://www.nimh.nih.gov/health/statistics/index.shtml>

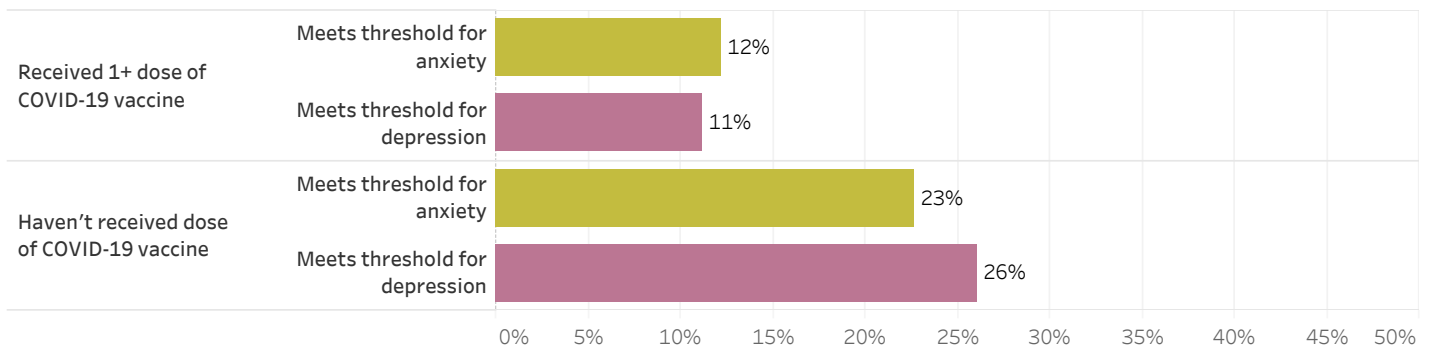

New Hampshire residents who identify as Non-Caucasian/White, those aged 18 to 34, those with a household income between \$45,000 and \$74,999, North Country residents, and those with a high school education or less are more likely than others to report feelings that meet the threshold for identifying possible cases of depression. Those with a household income of \$150,000 or more, those aged 65 and older, and those who have completed postgraduate work are less likely to report feelings meeting the threshold for depression.

**Meet Threshold for Depression - By Demographics - March 2021**

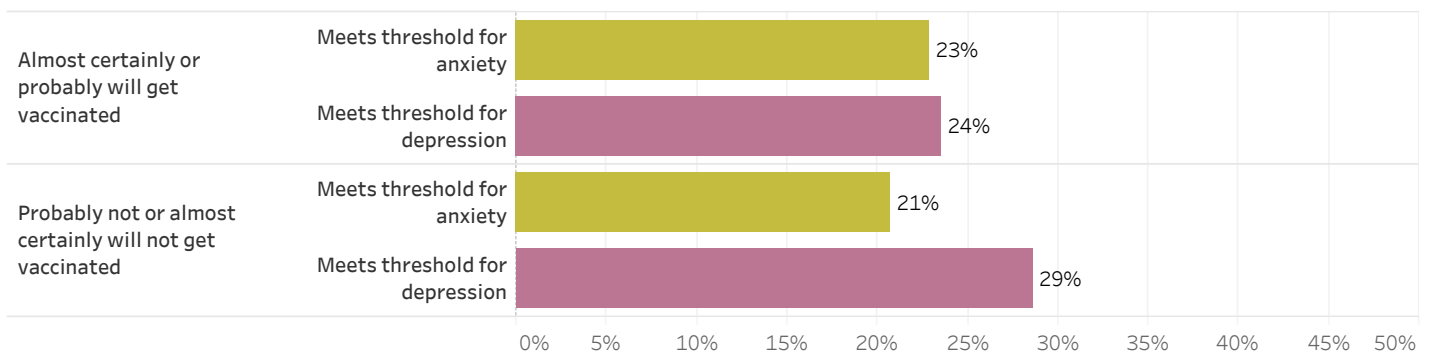

Among those who have not received at least one dose of a COVID-19 vaccine, 26% report feelings that meet the threshold for identifying possible cases of depression and 23% report feelings that meet the threshold for identifying possible cases of generalized anxiety disorder. Those who have received at least one dose of a COVID-19 vaccine are a good deal less likely to report feelings that meet the threshold for depression (11%) or anxiety (12%).

**Meet Threshold for Anxiety & Depression - By Vaccination Status - March 2021**

Among those who say they almost certainly or probably will get vaccinated against COVID-19 when a vaccine is available to them, 23% report feelings that meet the threshold for identifying possible cases of generalized anxiety disorder and 24% meet the threshold for identifying depression. Among those who say they will probably not or almost certainly not get vaccinated, 21% report feelings that meet the threshold for anxiety and 29% report feelings that meet the threshold for depression.

**Meet Threshold for Anxiety & Depression - By Likelihood of Getting Vaccinated When COVID-19 Vaccine is Offered - March 2021**

## Granite State Poll Methodology

These findings are based on the latest Granite State Poll, conducted by the University of New Hampshire Survey Center. One thousand seven hundred and forty-four (1,744) Granite State Panel members completed the survey online between March 18 and March 22, 2021. The margin of sampling error for the survey is +/- 2.3 percent. These MSE's have not been adjusted for design effect. The response rate for the March 2021 Granite State Poll is 30%. The design effect for the survey is 2.7%.

Data were weighted by respondent sex, age, education, and region of the state to targets from the most recent American Community Survey (ACS) conducted by the U.S. Census Bureau, as well as party registration levels provided by the NH Secretary of State and to 2020 election results in New Hampshire.

The Granite State Panel is part of an effort by the University of New Hampshire Survey Center to investigate new ways of gathering and understanding the opinion of New Hampshire residents. Approximately 5,750 New Hampshire adults were recruited from randomly selected landline and cell phone numbers to participate in the panel. Panelists are then asked to participate in online surveys sponsored by the UNH Survey Center.

The number of respondents in each demographic below may not equal the number reported in cross-tabulation tables as some respondents choose not to answer some questions. Due to rounding, percentages may not sum to 100%.

For more information about the methodology used in the Granite State Panel, contact Dr. Andrew Smith at (603) 862-2226 or by email at [andrew.smith@unh.edu](mailto:andrew.smith@unh.edu).
