DURHAM, NH - Two-thirds of Granite Staters report having received at least one dose of a COVID-19 vaccine. Most who have not been vaccinated and have not scheduled an appointment say they will not get vaccinated. Those who don't plan to get vaccinated most frequently cite a lack of trust that the vaccine will be safe or will be effective or say they believe COVID-19 isn't a serious threat to their health. A majority who have not been vaccinated but plan to would prefer to receive the Pfizer-BioNTech vaccine but most would take whichever vaccine was available.

These findings are based on the latest **Granite State Poll***, conducted by the University of New Hampshire Survey Center. One thousand nine hundred and forty-two (1,942) Granite State Panel members completed the survey online between April 16 and April 20, 2021. The margin of sampling error for the survey is +/- 2.2 percent. Data were weighted by respondent sex, age, education, and region of the state to targets from the most recent American Community Survey (ACS) conducted by the U.S. Census Bureau, as well as party registration levels provided by the NH Secretary of State and 2020 election results in NH. Granite State Panel members are recruited from randomly-selected landline and cell phone numbers across New Hampshire and surveys are sent periodically to panel members.

Likelihood of Getting COVID-19 Vaccine

More than three-quarters (76%) of New Hampshire adults say they have been vaccinated or are on track to be: 66% say they have already received at least one dose of a COVID-19 vaccine, 8% have scheduled an appointment, and 3% say they will almost certainly or probably get vaccinated. Twenty-two percent say they will probably not (4%) or almost certainly not (18%) get vaccinated while 1% are unsure. The percentage of adults who have been at least partially vaccinated (66%) has increased dramatically since March (35%) while the percentage who say they have received the vaccine or plan to get vaccinated (76%) is very slightly higher than in March (72%).

Likelihood of Getting Vaccinated When COVID-19 Vaccine is Offered

* We ask that this copyrighted information be referred to as *the Granite State Panel*, conducted by the University of New Hampshire Survey Center.

Respondents who voted for Donald Trump in 2020, those who identify as non-white, self-described conservatives, Connecticut Valley and Manchester Area residents, self-identified Republicans, and those with a high school education or less are most likely to say they almost certainly or probably will not get vaccinated.

Almost Certainly Not or Probably Not Get Vaccinated When COVID-19 Vaccine is Offered - By Demographics - April 2021

- Democrats (82%) are considerably more likely than Independents (53%) and Republicans (54%) to say they are partially or fully vaccinated against COVID-19. The percentage who are partially or fully vaccinated has increased by 41 percentage points among Democrats since March, by 24 points among Republicans, and by 16 points among Independents.
- Nine in ten (91%) Granite Staters aged 65 and older say they are partially or fully vaccinated against COVID-19, while fewer younger respondents say so. However, the percentage of those younger than 65 who have received at least one dose has risen dramatically since March.
- Eighty-four percent of Granite Staters who have completed postgraduate work say they are partially or fully vaccinated against COVID-19 while only just over half (55%) of those with a high school education or less are partially or fully vaccinated.
- Two-thirds of Granite Staters who identify as Caucasian or White (67%) say they are partially or fully vaccinated against COVID-19 but only 52% of those who identify as non-white say they are partially or fully vaccinated.

Partially or Fully Vaccinated Against COVID-19 - Change from March 2021 to April 2021

Among those who say they will probably not or almost certainly not receive a COVID-19 vaccine (N=427), 80% say they don't plan to do so because they don't believe the vaccine is safe, 56% say they don't plan to because they don't believe the vaccine will be effective at stopping them from getting COVID-19, and 45% don't believe COVID-19 is a serious threat to their health. Fewer residents say they don't plan to get vaccinated because they already had COVID-19 so they don't feel it's necessary (20%), because the vaccine is contrary to their religious beliefs (10%), because they are medically unable to receive vaccines (7%), or for another reason (25%).

Reasons Unlikely to Receive COVID-19 Vaccine (Select all that apply) - April 2021

Among those who say they will probably not or almost certainly not receive a COVID-19 vaccine or don't know if they will (N=458), very few say they would be more likely to get vaccinated if any of the following conditions were true. In fact, these respondents indicate that each of these conditions would have a net negative effect on their likelihood of being vaccinated.

Fifteen percent say they would be more likely to get vaccinated if it were required by their employer, 12% would be more likely if their personal doctor advised them to receive the vaccine as soon as possible, 9% would be more likely to get vaccinated if it were required to travel by air, and 8% would be more likely to get vaccinated if their employer offered money or another incentive. Five percent or less say they would be more likely to be vaccinated if it were required to visit a travel or entertainment destination such as hotels, concerts, or sporting events (5%), if their friends or family received the vaccine and experienced few or no side effects (2%), if it were required to visit a favorite restaurant or store (2%), if friends or family asked them to get vaccinated (1%), or if businesses offered giveaways or raffles only to those who are vaccinated (<1%).

Effect on Likelihood of Getting COVID-19 Vaccine - April 2021

Among those who have received at least one dose of a COVID-19 vaccine (N=1,271), only 5% describe the side effects as serious (5%) or very serious (<1%). Fifteen percent describe the side effects as moderate, more than half (53%) describe them as mild (19%) or very mild (34%), and 27% say they experienced no side effects at all. Women and those under the age of 50 are slightly more likely than men and those aged 50 and older to describe the side effects they experienced as moderate, serious, or very serious.

How Describe Side Effects as a Result of Receiving a COVID-19 Vaccine

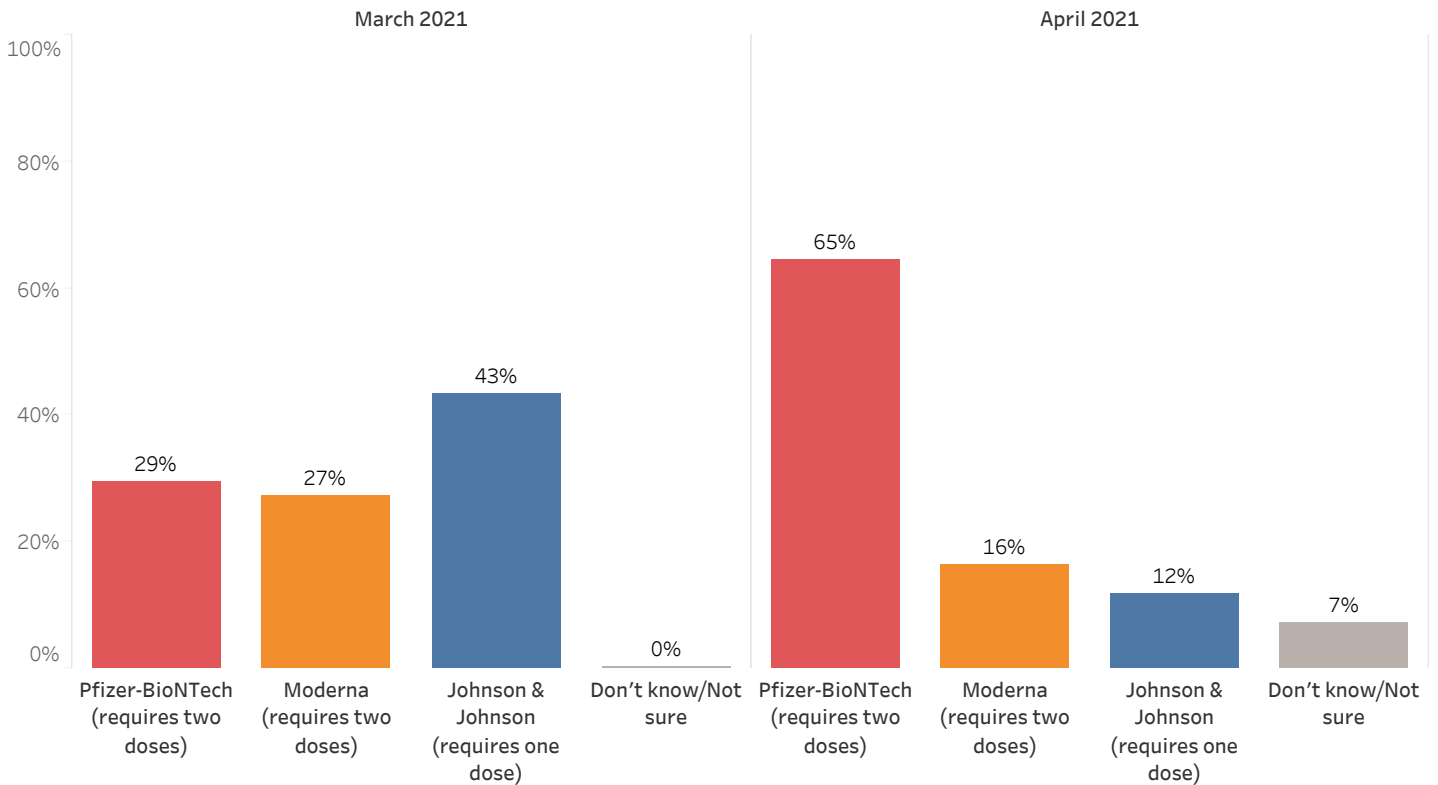

Among those who have not yet received a dose of a COVID-19 vaccine but plan to get vaccinated (N=206), 55% say they have a preference of which vaccine they would like to receive, 38% say they don't have a preference, and 7% are unsure. A slightly larger number of those who are unvaccinated say they have a preference (55%) than said so in March (44%).

Have Preference For Which COVID-19 Vaccine to Receive

Following the "pause" in administering the Johnson & Johnson vaccine to examine a possible linkage with blood clots, Granite Staters are considerably less likely to prefer to receive the Johnson & Johnson vaccine. Among those who have a preference for a vaccine (N=114), two-thirds (65%) say they prefer the Pfizer-BioNTech vaccine (requires two doses), 16% prefer the Moderna vaccine (requires two doses), 12% prefer the Johnson & Johnson vaccine (requires one dose), and 7% are unsure. In March, a plurality (43%) preferred the Johnson & Johnson vaccine and about a quarter each preferred the two-dose vaccines, Pfizer-BioNTech and Moderna.

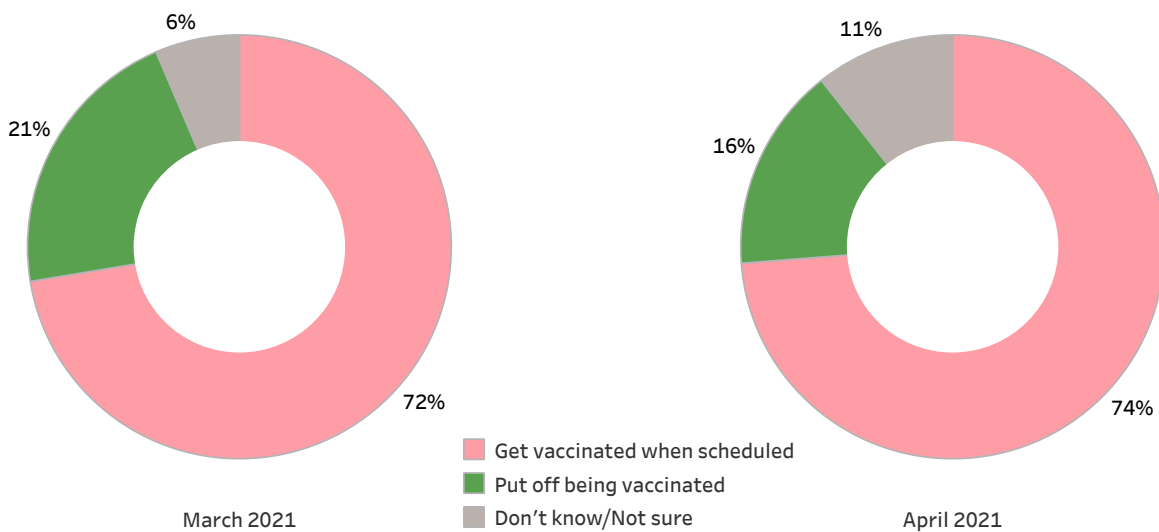

Preferred COVID-19 Vaccine

Among those who have a preference of which vaccine they receive (N=114), three-quarters (74%) say that they would get vaccinated when scheduled even if their preferred vaccine was not available, 16% say they would put off being vaccinated in order to receive the vaccine they prefer, and 11% don't know or are unsure.

Respondents are about equally likely regardless of their preferred vaccine to say they would put off vaccination in order to receive their preferred vaccine.

Plan if Preferred Vaccine is Not Available When Scheduled to Receive Vaccine

Among those who plan to get vaccinated but haven't signed up for an appointment (N=121), nearly half (45%) say they don't have a preference for where they'd like to be vaccinated while 15% are unsure. Twenty-two percent say they would prefer to be vaccinated at their own doctor's office, 7% would prefer to be vaccinated at a mass vaccination event such as at the New Hampshire Speedway in Loudon, 6% would prefer to be vaccinated at a state run vaccine site, 3% would prefer to be vaccinated at a pharmacy, and 2% would prefer to be vaccinated at their workplace.

Where Prefer to Be Vaccinated

Among those who have a preference of where they would like to be vaccinated (N=47), 71% say that they would schedule an appointment at their preferred location, even if it isn't the soonest appointment available, while 29% don't know or are unsure what they would do. None of these respondents say they would schedule an appointment as soon as possible, even if it wasn't at their preferred location.

Plan if Preferred Location is Not Available

Schedule an appointment at your preferred location, even if it isn't the soonest appointment available ■

Don't know/Not sure ■

Concerns About the COVID-19 Vaccine

About seven in ten New Hampshire residents say they are very or somewhat confident that the COVID-19 vaccine will be safe (72%) and will stop them from getting sick with COVID-19 (69%), while two-thirds are confident the vaccine will have few or minimal side effects (67%) and that it has gone through an appropriate approval process (66%). Only about half however are confident that the COVID-19 vaccine will provide long-lasting protection against COVID-19 (52%) and will remain effective against COVID-19 mutations (49%).

Confidence in Aspects of COVID-19 Vaccine - April 2021

New Hampshire residents are slightly more confident that the COVID-19 vaccines will have few or minimal side effects than they were in March. Otherwise, confidence in these aspects of the vaccine is largely unchanged.

Confidence in Aspects of COVID-19 Vaccine

More than four-fifths of Democrats are confident that the vaccine will be safe, will stop them from getting sick with COVID-19, will have few or minimal side effects, and that it has gone through an appropriate approval process but only about half of Independents and Republicans are confident in these aspects of the vaccine.

Confidence in Aspects of COVID-19 Vaccine - By Party ID - April 2021

Granite State Poll Methodology

These findings are based on the latest Granite State Poll, conducted by the University of New Hampshire Survey Center. One thousand nine hundred and forty-two (1,942) Granite State Panel members completed the survey online between April 16 and April 20, 2021. The margin of sampling error for the survey is +/- 2.2 percent. These MSE's have not been adjusted for design effect. The response rate for the April 2021 Granite State Poll is 32%. The design effect for the survey is 2.5%.

Data were weighted by respondent sex, age, education, and region of the state to targets from the most recent American Community Survey (ACS) conducted by the U.S. Census Bureau, as well as party registration levels provided by the NH Secretary of State and to 2020 election results in New Hampshire.

The Granite State Panel is part of an effort by the University of New Hampshire Survey Center to investigate new ways of gathering and understanding the opinion of New Hampshire residents. Approximately 6,000 New Hampshire adults were recruited from randomly selected landline and cell phone numbers to participate in the panel. Panelists are then asked to participate in online surveys sponsored by the UNH Survey Center.

The number of respondents in each demographic below may not equal the number reported in cross-tabulation tables as some respondents choose not to answer some questions. Due to rounding, percentages may not sum to 100%.

For more information about the methodology used in the Granite State Panel, contact Dr. Andrew Smith at (603) 862-2226 or by email at andrew.smith@unh.edu.

April 2021 Granite State Poll Demographics

		%	N
