ONE-QUARTER OF NH RESIDENTS & NEARLY HALF OF TRUMP VOTERS STILL UNLIKELY TO RECEIVE COVID-19 VACCINE

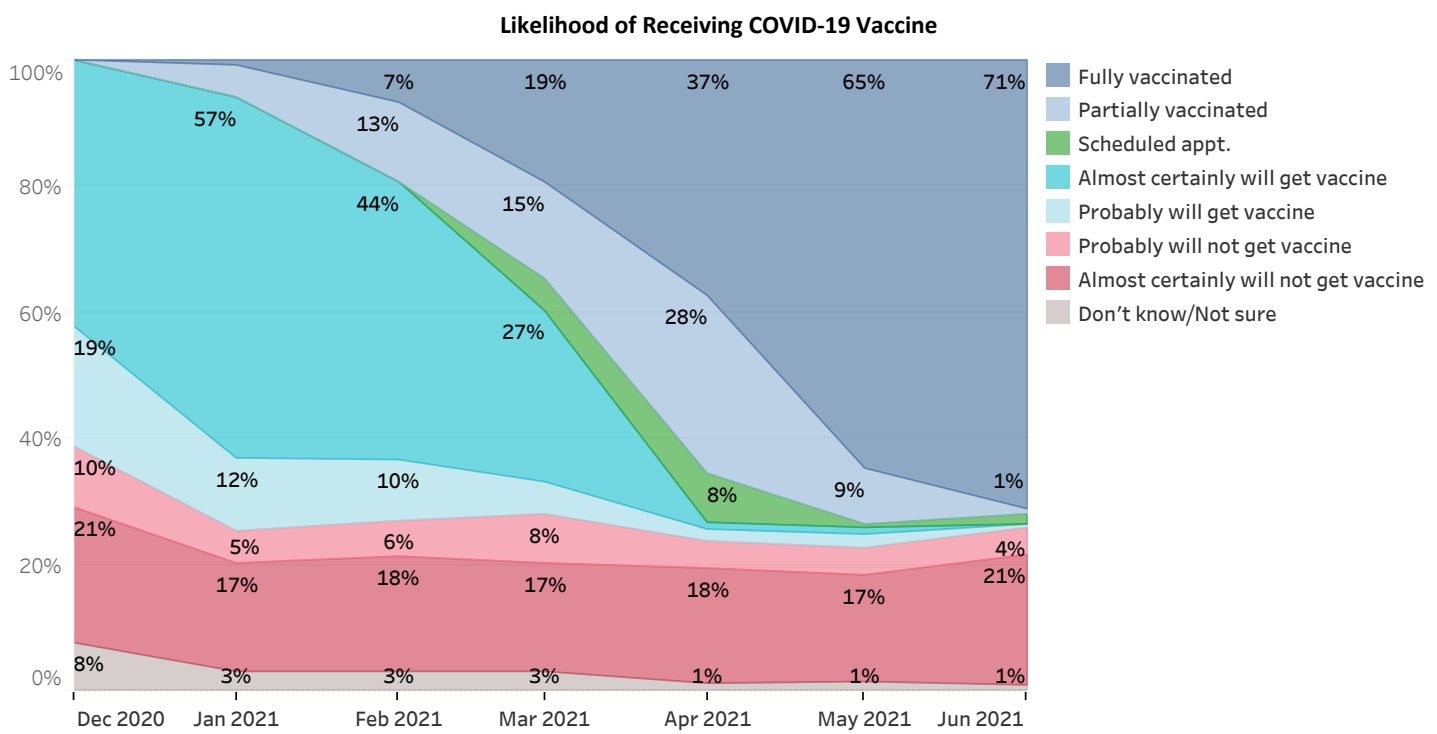

By: Sean P. McKinley, M.A. Tracy Keirns, Ph.D. andrew.smith@unh.edu
 Zachary S. Azem, M.A. Judy Rees, B.M., B.Ch, M.P.H., Ph.D. 603-862-2226
 Andrew E. Smith, Ph.D. cola.unh.edu/unh-survey-center

DURHAM, NH - Seven in ten New Hampshire residents report having been vaccinated against COVID-19, a very small percentage still plan to get vaccinated, but a quarter don't plan to get vaccinated. Those who voted for Donald Trump are more than five times as likely as Biden voters to say they don't plan to get vaccinated. Among those who are not vaccinated, very few would change their mind even if advised to by their doctor or family or if the vaccine were required by their employer.

These findings are based on the latest **Granite State Poll***, conducted by the University of New Hampshire Survey Center. One thousand six hundred and two (1,602) Granite State Panel members completed the survey online between June 17 and June 21, 2021. The margin of sampling error for the survey is +/- 2.4 percent. Data were weighted by respondent sex, age, education, and region of the state to targets from the most recent American Community Survey (ACS) conducted by the U.S. Census Bureau, as well as party registration levels provided by the NH Secretary of State and 2020 election results in NH. Granite State Panel members are recruited from randomly-selected landline and cell phone numbers across New Hampshire and surveys are sent periodically to panel members.

Decision to Receive COVID-19 Vaccine

Nearly three-quarters of New Hampshire adults (74%) say they have been fully or partially vaccinated or plan to be: 72% say they have already received at least one dose of a COVID-19 vaccine, 2% have scheduled an appointment, and less than 1% say they will almost certainly or probably get vaccinated. However, 25% of New Hampshire residents say they will probably not (4%) or almost certainly not (21%) get vaccinated and 1% are unsure. The percentage of adults who say they will almost certainly not get vaccinated (21%) has increased slightly since May (17%). Those who voted for Donald Trump in 2020 (45%) remain far more likely than those who voted for Joe Biden (8%) to say they will not get vaccinated. Trump voters are slightly (+8 percentage points) more likely than they were in May to say they will not get vaccinated.

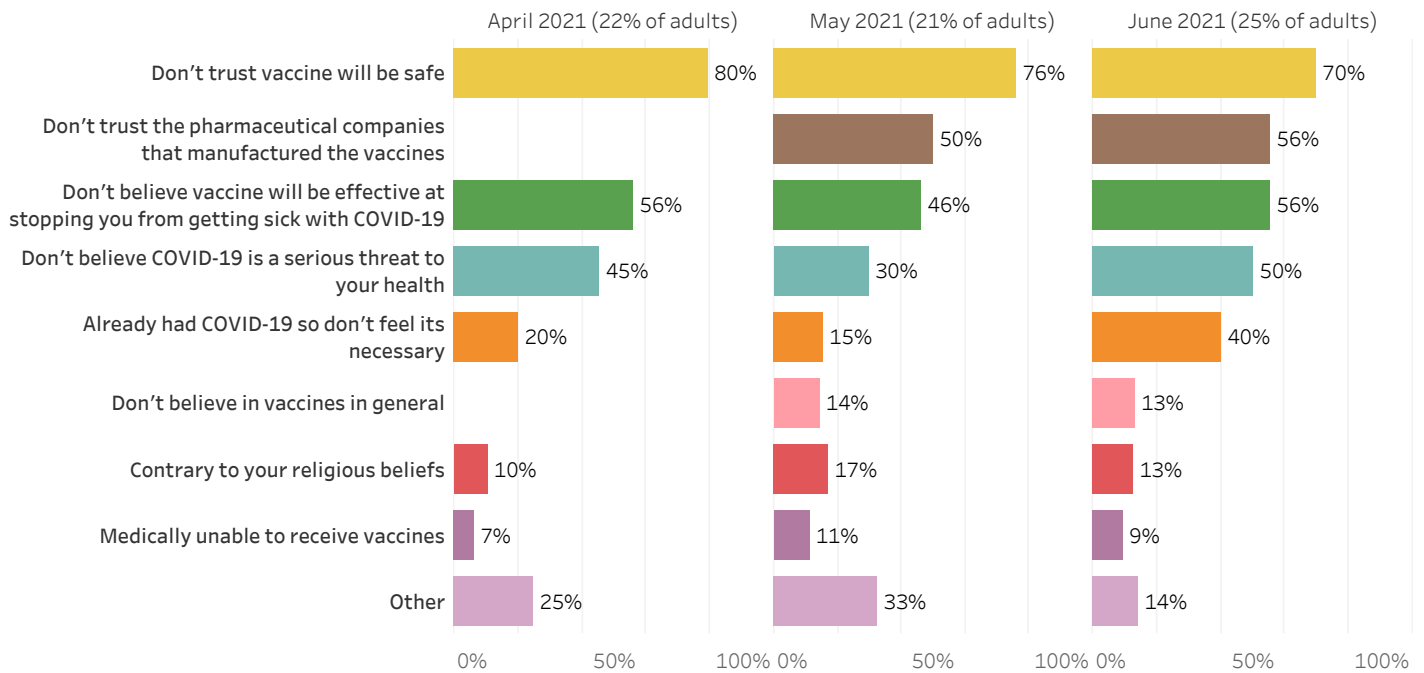

* We ask that this copyrighted information be referred to as *the Granite State Panel*, conducted by the University of New Hampshire Survey Center.

Vaccine Hesitancy

Among those who say they will probably not or almost certainly not receive a COVID-19 vaccine (N=398), most give more than one reason for their decision. Seven in ten (70%) say they don't plan to do so because they don't believe the vaccine is safe, 56% don't trust the pharmaceutical companies that manufactured the vaccines, and 56% don't believe the vaccine will be effective at stopping them from getting COVID-19. Half (50%) don't plan to get vaccinated because they don't believe COVID-19 is a serious threat to their health and 40% say they've already had COVID-19 so they don't feel getting vaccinated is necessary. Smaller percentages of unvaccinated people say they don't plan to get vaccinated because they don't believe in vaccines in general (13%), because it is contrary to their religious beliefs (13%), or because they are medically unable to receive vaccines (9%). Fourteen percent cite another reason that they are unlikely to receive the vaccine.

Reasons Unlikely to Receive COVID-19 Vaccine (Multiple responses possible, percentages sum to more than 100%)

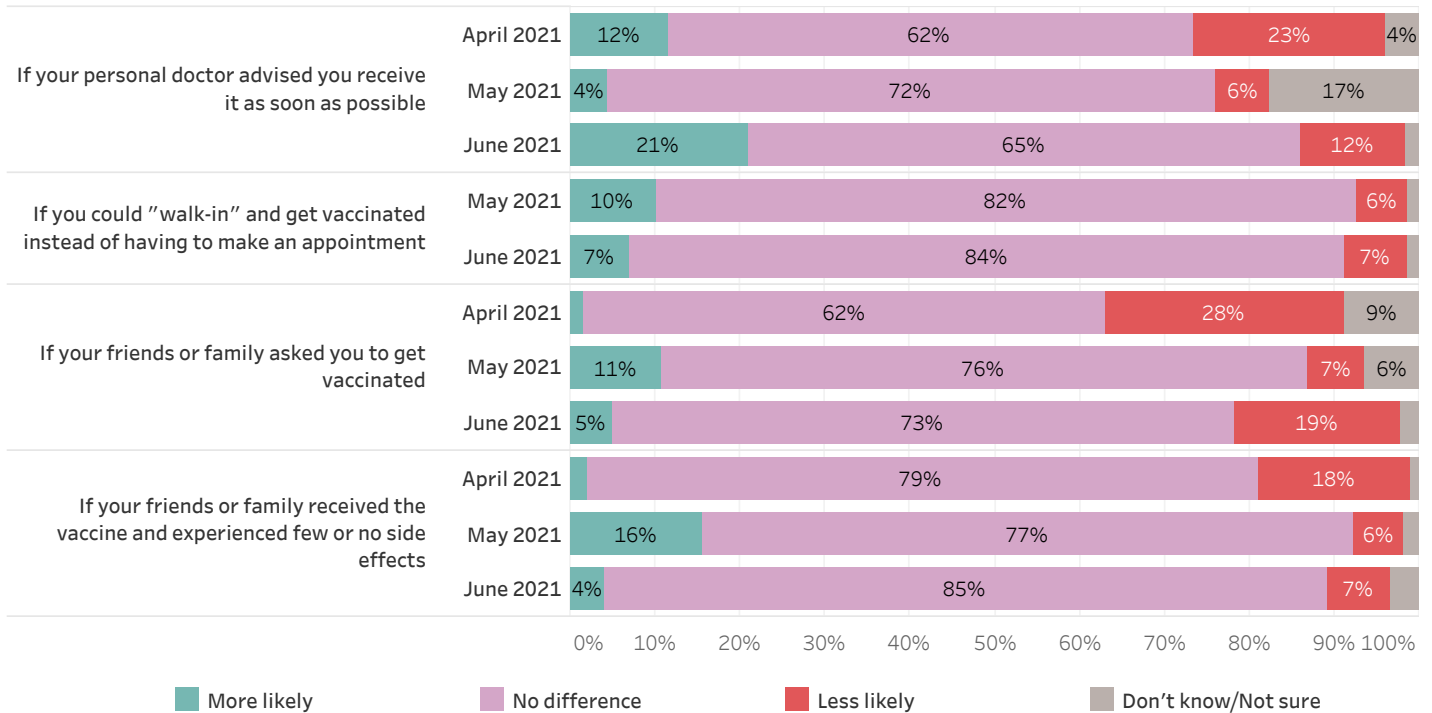

Those who are unlikely to get vaccinated are more likely than they were in May to say they don't plan to get vaccinated because they've already had COVID-19 and don't feel its necessary (+35 percentage points) or because they don't believe COVID-19 is a serious threat to their health (+20), while they are somewhat more likely than in May to cite a lack of belief that the vaccine will be effective at stopping them from getting sick with COVID-19 (+10).

Reasons Unlikely to Receive COVID-19 Vaccine (Select all that apply) - Change from May to June 2021

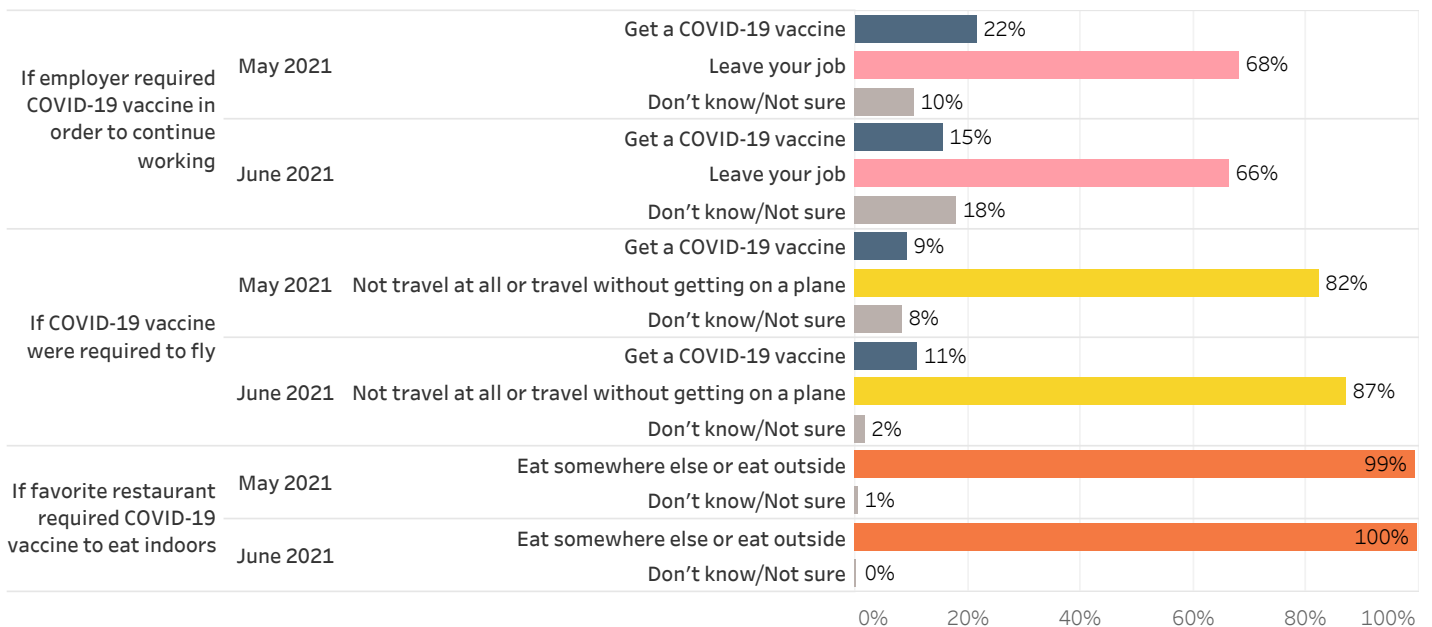

It will be difficult to convince most non-vaccinated people to get vaccinated. Among those who say they will probably not or almost certainly not get the COVID-19 vaccine or don't know if they will (N=403), only 21% say they would be more likely to get vaccinated if their personal doctor advised them to get it as soon as possible, 7% say they would be more likely to get vaccinated if they could "walk-in" and get vaccinated instead of having to make an appointment, 5% would if their friends or family asked them to, and 4% would if their friends or family received the vaccine and experienced few or no side effects.

Effect on Likelihood of Getting COVID-19 Vaccine

Even being faced with significant economic or lifestyle consequences, few unvaccinated adults say they would get vaccinated. Among those who say they will probably not or almost certainly not receive a COVID-19 vaccine, two-thirds (66%) say they would leave their job if their employer required COVID-19 vaccination in order to continue working there, only 15% say they would get a COVID-19 vaccine, and 18% are unsure. If it were required to receive a COVID-19 vaccine in order to fly, 87% say they would not travel at all or travel without getting on a plane, only 11% say they would get a COVID-19 vaccine, and 2% are unsure. If it were required by their favorite restaurant to get a COVID-19 vaccine to eat indoors, 100% say they would eat somewhere else or eat outside.

Most Likely Decision in the Following Situations

Concerns About the COVID-19 Vaccine

Most New Hampshire residents say they are very or somewhat confident that the COVID-19 vaccine will stop them from getting sick with COVID-19 (70%), that it will be safe (69%), and that it will have gone through an appropriate approval process (66%). Sixty-four percent are confident that it will have few or minimal side effects, 57% are confident that the COVID-19 vaccine will remain effective against COVID-19 mutations, and 55% believe it will provide long-lasting protection against COVID-19.

Confidence in Aspects of COVID-19 Vaccine - June 2021

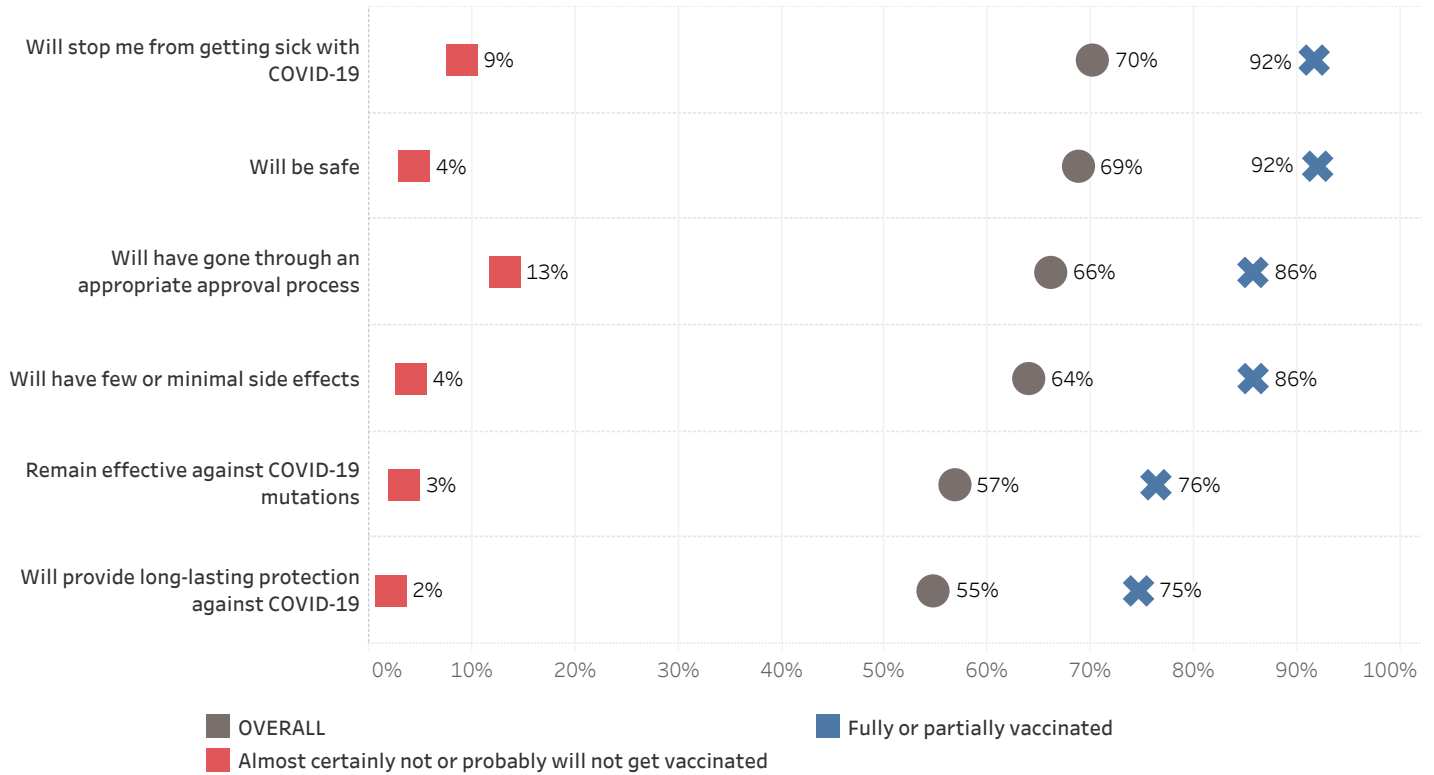

There has been little change in Granite Staters confidence in these aspects of the COVID-19 vaccine.

Confidence in Aspects of COVID-19 Vaccine

There is a stark difference in how vaccinated residents and those who do not plan to get vaccinated view the aspects of the vaccine. Three-quarters or more of New Hampshire adults who are fully or partially vaccinated are confident in all of the aspects of the vaccine which they were asked about. However, very few of those who say it is unlikely that they will get vaccinated are confident in any of these aspects.

Confidence in Aspects of COVID-19 Vaccine - June 2021 - by Vaccination Status

Granite State Poll Methodology

These findings are based on the latest Granite State Poll, conducted by the University of New Hampshire Survey Center. One thousand six hundred and two (1,602) Granite State Panel members completed the survey online between June 17 and June 21, 2021. The margin of sampling error for the survey is +/- 2.4 percent. These MSE's have not been adjusted for design effect. The response rate for the June 2021 Granite State Poll is 27%. The design effect for the survey is 2.7%.

Data were weighted by respondent sex, age, education, and region of the state to targets from the most recent American Community Survey (ACS) conducted by the U.S. Census Bureau, as well as party registration levels provided by the NH Secretary of State and to 2020 election results in New Hampshire.

The Granite State Panel is part of an effort by the University of New Hampshire Survey Center to investigate new ways of gathering and understanding the opinion of New Hampshire residents. Approximately 6,000 New Hampshire adults were recruited from randomly selected landline and cell phone numbers to participate in the panel. Panelists are then asked to participate in online surveys sponsored by the UNH Survey Center.

The number of respondents in each demographic below may not equal the number reported in cross-tabulation tables as some respondents choose not to answer some questions. Due to rounding, percentages may not sum to 100%.

For more information about the methodology used in the Granite State Panel, contact Dr. Andrew Smith at (603) 862-2226 or by email at andrew.smith@unh.edu.
