DURHAM, NH - Most New Hampshire adults are currently vaccinated and two-thirds of these residents have received a booster and nearly all of the rest plan to. Six in ten New Hampshire adults are concerned about the Omicron variant and most expect the COVID-19 situation to get worse over the next month.

These findings are based on the latest **Granite State Poll***, conducted by the University of New Hampshire Survey Center. Eight hundred fifty-three (853) Granite State Panel members completed the survey online between December 16 and December 20, 2021. The margin of sampling error for the survey is +/- 3.4 percent. Data were weighted by respondent sex, age, education, and region of the state to targets from the most recent American Community Survey (ACS) conducted by the U.S. Census Bureau, as well as party registration levels provided by the NH Secretary of State and 2020 election results in NH. Granite State Panel members are recruited from randomly-selected landline and cell phone numbers across New Hampshire and surveys are sent periodically to panel members.

COVID-19 Vaccination Decision

COVID vaccinations in New Hampshire have stalled in recent months - 80% of New Hampshire adults say they have been fully (80%) or partially (<1%) vaccinated and less than 1% plan to get vaccinated. Twenty percent say they will almost certainly not (18%) or probably not (1%) get vaccinated, unchanged since November (18%). Nearly all (>99%) self-identified Democrats in the state say they are fully or partially vaccinated but only 67% of Independents and 63% of Republicans are fully vaccinated. Among those who are unvaccinated, a quarter (25%) say they have tested positive for COVID-19 in the past six months and 7% have tested positive more than six months ago, while among vaccinated people 6% have tested positive in the past six months and 6% longer ago.

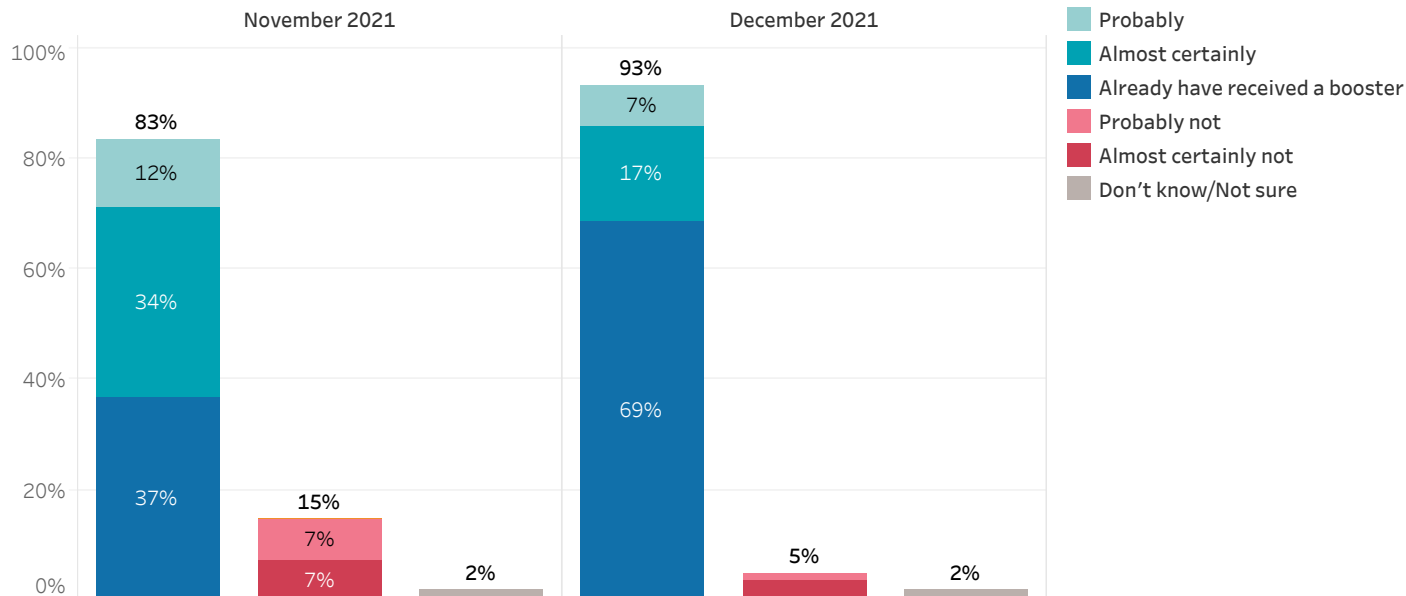

Likelihood of Receiving COVID-19 Vaccine

* We ask that this copyrighted information be referred to as *the Granite State Poll*, conducted by the University of New Hampshire Survey Center.

Most of those are fully or partially vaccinated against COVID-19 (N=672) say they have already received a booster or are almost certainly or probably going to; more than two-thirds (69%) say they have already received a booster shot, 17% say they will almost certainly get one, and 7% say they will probably get one. Only 5% say they will probably not (1%) or almost certainly not (4%) get a booster shot and 2% are unsure. The percentage of vaccinated respondents who say they have received a booster (69%) has increased dramatically since November (37%) as the availability of booster shots has expanded to all adults, while the percentage who say they almost certainly not or will probably not get a booster (5%) has declined since November (15%).

Likelihood of Receiving COVID-19 Vaccine Booster Shot

The most frequent reason that non-vaccinated New Hampshire residents (N=168) say they don't plan to get vaccinated are because they don't believe the vaccine will be effective at stopping them from getting COVID-19 (91%), that they don't trust the pharmaceutical companies that manufactured the vaccines (77%), and that they don't trust the vaccine will be safe (59%). Less than half of unvaccinated adults say they don't plan to get vaccinated because they don't believe COVID-19 is a serious threat to their health (40%), because they have already had COVID-19 so they don't feel its necessary (34%), because they don't believe in vaccines in general (27%), because the vaccine is contrary to their religious beliefs (6%), because they are medically unable to receive vaccines (1%), or for another reason (14%).

The percentage of unvaccinated adults who say they are unlikely to get vaccinated because they don't believe the vaccine will effectively stop them from getting sick continues to rise; currently 91% of unvaccinated Granite Staters feel this way compared to 76% in September and 46% in May.

Reasons Unlikely to Receive COVID-19 Vaccine (Select all that apply)

COVID-19 Vaccination for Children

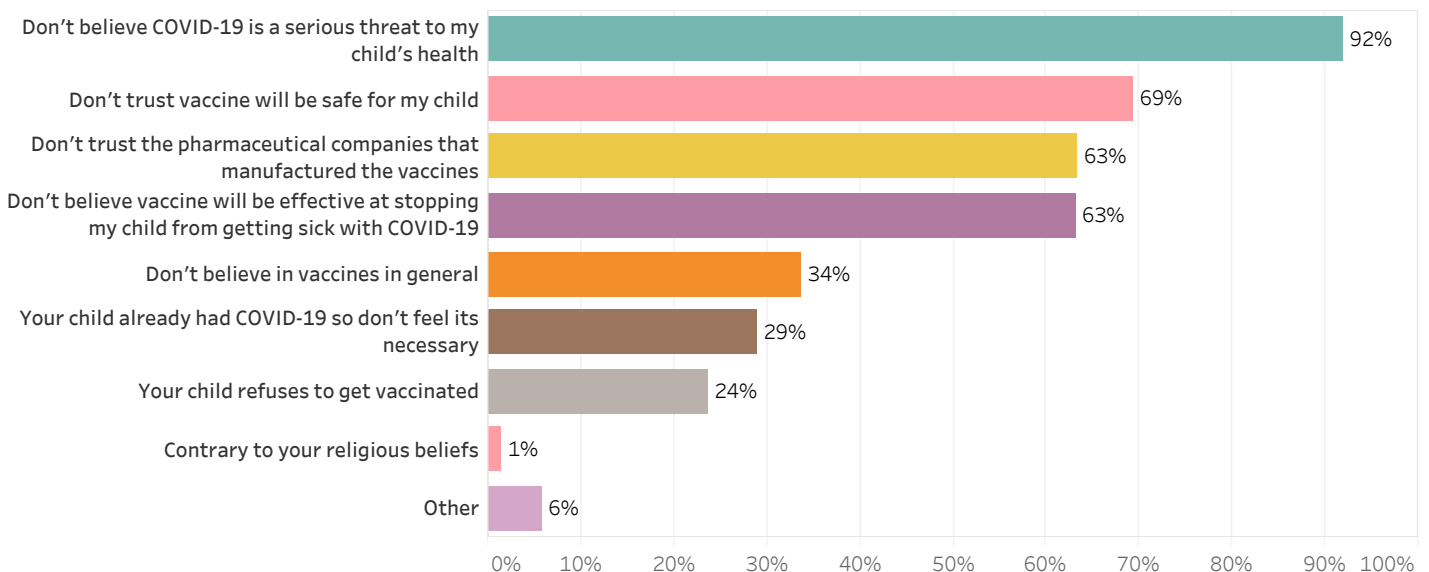

Among New Hampshire parents of children between the ages of 5 and 17 (N=281), 50% say their children have already been vaccinated while 7% will almost certainly (5%) or probably (2%) get vaccinated. Forty-two percent say they will probably not (2%) or almost certainly not (41%) vaccinate their kids. Among parents who are vaccinated themselves, 79% of their children are vaccinated or are likely to be, while among those who are unvaccinated, only 3% indicate that they are likely to vaccinate their children or already have. The percentage of children who are already vaccinated (50%) has increased slightly since November (43%) but the percentage who are unlikely to get vaccinated (42%) has also slightly increased since November (35%).

Likelihood of Child Receiving COVID-19 Vaccine

Among parents who say they are unlikely to vaccinate at least one of their children (N=116), 92% say they don't believe that COVID-19 is a serious threat to their child's health, 69% say they don't trust that the vaccine will be safe, 63% don't trust the pharmaceutical companies that manufactured the vaccines, and 63% don't believe the vaccine will be effective at stopping their child from getting COVID. Other less mentioned reasons to not vaccinate their children are they don't believe in vaccines in general (34%), that their child has already had COVID-19 so they don't feel its necessary (29%), their child refuses to get vaccinated (24%), because it is contrary to their religious beliefs (1%), or for another reason (6%).

Reasons Child Unlikely to Receive COVID-19 Vaccine (Select all that apply) - December 2021

Omicron Variant

Six in ten (59%) New Hampshire residents say that they are very (40%) or somewhat (19%) concerned about the Omicron variant of the COVID-19 virus, while 41% are not very concerned (14%) or not at all concerned (26%). Nearly all (97%) self-identified Democrats and 55% of Independents are very or somewhat concerned about Omicron but only 20% of Republicans feel this way.

Concern about Omicron Variant - by Party ID - December 2021

Despite a majority of Granite Staters being concerned, the Omicron variant appears to have no effect on the likelihood of unvaccinated people to get vaccinated themselves or to have their children get vaccinated. Less than 1% of unvaccinated respondents say that the Omicron variant makes them more likely to get vaccinated while only 2% say that they are more likely to vaccinate their children because of the Omicron variant. Similar to when the Delta variant of COVID-19 was first emerging, very few unvaccinated adults said that it would make them more likely to get vaccinated.

Spread of Omicron Variant Make More Likely to Consider Vaccination - December 2021

Feelings About COVID-19 Pandemic

Granite Staters are quite pessimistic in their short-term assessment of the COVID-19 pandemic: only 7% believe things will be much (1%) or somewhat (6%) better in a month than they are now while 60% believe things will be somewhat (27%) or much (32%) worse. Most New Hampshire residents also do not expect things to improve within three months - only 23% predict things will be better while 37% predict things will be worse. However, more than half of residents (53%) expect things to be better in six months and only 10% expect things to be worse, while 57% expect things to be better in twelve months and only 3% expect things to be worse than they are now.

Believe COVID-19 Pandemic Will Be Better or Worse - December 2021

Granite State Poll Methodology

These findings are based on the latest Granite State Poll, conducted by the University of New Hampshire Survey Center. Eight hundred fifty-three (853) Granite State Panel members completed the survey online between December 16 and December 20, 2021. The margin of sampling error for the survey is +/- 3.4 percent. These MSE's have not been adjusted for design effect. The response rate for the December 2021 Granite State Poll is 30%. The design effect for the survey is 2.8%.

Data were weighted by respondent sex, age, education, and region of the state to targets from the most recent American Community Survey (ACS) conducted by the U.S. Census Bureau, as well as party registration levels provided by the NH Secretary of State and to 2020 election results in New Hampshire.

The Granite State Panel is part of an effort by the University of New Hampshire Survey Center to investigate new ways of gathering and understanding the opinion of New Hampshire residents. Approximately 7,500 New Hampshire adults have been recruited from randomly selected landline and cell phone numbers to participate in the panel. Panelists are then asked to participate in online surveys sponsored by the UNH Survey Center.

The number of respondents in each demographic below may not equal the number reported in cross-tabulation tables as some respondents choose not to answer some questions. Due to rounding, percentages may not sum to 100%.

For more information about the methodology used in the Granite State Panel, contact Dr. Andrew Smith at (603) 862-2226 or by email at andrew.smith@unh.edu.
