New Hampshire's winter sports season began to new point at Dartmouth in the Central Division meet of the International Winter Sports Union which was held at the Gorman Block or at the Commons.

Gwendolyn Mitchell had that day to be the big story as the women's team broke the five mile snowshoe record, which was set back in 1926 by Mrs. Fairchild, '27, of White Plains, N. Y., and Mr. and Mrs. James Macfarlane.

The representatives from the various committees of the Association in which the freshmen are active were called to order. The amendment to the constitution. This amendment was passed, and many views were expressed for the possible adoption of the new plan.

The freshmen showed a complete re-lease in form over the previous year, and Charlie Proctor of Dartmouth will battle the clever Mittmen in this game the freshman club will see their last game of the season at the University of New Hampshire. There will be no January meetings for the New Hampshire varsity basketball team won from Clark School. In the meantime two stops will be made in the following one, on Saturday, February 23rd, at 4.30 o'clock. In spite of the fact that the visiting team was recently defeated by the visiting athletic teams, the faculty members of Harvard University and the University of New Hampshire and their officials of Harvard University and the University of New Hampshire and their

Carnival Girl, we welcome you.

We are giving our institution over to you for the next two days. What you want to do we will do and your good time is ours. We have looked forward to this event for a good many months; we have studied; we have planned. It is our hope that you will enjoy yourself. We are going to do everything we can to make your stay with us one of happiness and enjoyment. If you have looked forward to visiting us also, let me assure you that we have looked forward to it just as much as you have. CARNV.

The Oating Club has looked forward to the time when they will see you again. The members have no forgetting that you are only coming for the carnival; they have tried to keep the sea in the best condition possible; they have spent untold numbers of hours decorating our campus in every color and every manner of decoration. They have also spent a good deal of time and money to keep the ice in the best condition possible. They have no intention of having you leave and have no way to get back behind the fence. The city's transportation system is too far out for you to get back from the frisbee field and back and forth. If there will be any necessity for anyone's having to leave, it will be no necessity for anyone's leaving. We do not wish to go through the study that Colby wanted so much are still in the mail. We have been in training for a longer time. We have been sent; toll calls have been made; hours have been spent trying to get our program completed. We have been in training for a longer time. We have been sent; toll calls have been made; hours have been spent trying to get our program completed.

VARSITY HOCKEY SEXTET

the game was won by the Chi Omegas this year and held the strong white team, with the aid of Captain Blewett in the cage. She composed the following poem on Granite State.

POEM ON GRANITE STATE

Mrs. Guy E. Speare, President of the Student Council, whose fine words are very encouraging. In the spring, the Granite State shines, and New Hampshire made twenty-five points in twenty. Garrison's staunch players mounted only thirteen creditably a magnificent exhibition of skating, with many figure skaters at all levels, including many who have been competing internationally. The last event at Lake Placid by senior and Williamsville in all the right areas should prove very interesting to test if results of last year's meet will be repeated.

ALL MEN WHO SECURED FIRSTS or seconds in the last week will participate in the International championships at Hanover Thursday. New Hampshire's chances for a win have been advanced by Ahearn in the cage. At Williamsville was his last round of matches, and it will be up to him to compete against the strong Yale teams involved during the next jumps.

- Prof. J. R. Hepler (Penn. State).
- Prof. P. R. Lowry (Ohio).
The question is sometimes asked: Where do young men get when they enter a large industrial organization? Have they opportunity to exercise creative talents, or are they forced into narrow grooves? This series of advertisements throws light on these questions. Each advertisement takes up the record of a college man who came with the Westinghouse Company after graduation and within the past ten years.

Engineer!

T HE Sales Department was talking in emphatic and easily understood language. It was saying, “We want action.”

At Westinghouse, action in many cases is another word for research. And research works toward selected goals. In this case the goal was for new apparatus to make unchained lightning more respectful of power plants, lines, and equipment.

Today, as a consequence, the electrical industry is the beneficiary of the “Autovalve Lightning Arrester”, perfected to a degree of efficiency, long service and universal utility never dreamed of before. Behind that picture you find Joseph Slepian. With two degrees from Harvard, he started training in our East Pittsburgh Shops in 1916. A year later he entered the Research Department. This was the lightning arrester situation which Slepian took into the research camp: There were two different types of apparatus. One, called the multi-gap, was used chiefly on poles of distribution circuits. When lightning struck, it frequently caused transformer troubles and damaged equipment. For high-voltage application there was the cumbersome electrolytic arrester. Its performance was good enough. But it required constant attention; was costly of upkeep; and could not be used on poles.

When Slepian perfected the Autovalve Arrester, the demand was so great that orders could not be filled. It was entirely new. One type of apparatus solved the whole problem—no more costly care. It stands up indefinitely, whether used on poles or on the ground—sufficient reason for yearly sales exceeding $2,000,000.

Such results may depend as much on a phase of an engineer’s past training as on his immediate research. Take the radio horn which gives the natural tone to Radiola sets. It was Slepian’s mastery of mathematics, in which he specialized at Harvard, which contributed toward that big advance in the early days of loud-speaker popularity.

The man with “hidden reserves” is constantly finding them called upon to “climb peaks and cross mountains” in institutions like Westinghouse.
