DURHAM, NH - Reported COVID-19 cases among Granite Staters have fallen abruptly since January. Currently, one-quarter say they have tested positive for COVID since the pandemic began. Six in ten adults say they are vaccinated and boosted, another 17% are vaccinated but not boosted, and 22% are not vaccinated at all. Overall, seven in eight Granite Staters likely have some protection against COVID-19 through vaccination or recent infection. Virtually no unvaccinated adults plan to get vaccinated, most frequently citing a lack of belief in the vaccine's effectiveness. Only four in ten children in the state aged 5-17 are vaccinated against COVID-19 and almost no parents are planning to vaccinate the children who remain unvaccinated.

COVID-19 Positive Tests

Almost two years into the pandemic, 27% of New Hampshire residents say that they have tested positive for COVID-19 at least once - 3% have tested positive in the past month, 18% tested positive in the past three months, 2% tested positive in the past six months, 2% tested positive in the past year, and 3% tested positive more than a year ago. In January, 13% reported testing positive for COVID-19 in the previous month compared to only 3% who say they have tested positive in the past month.

Those aged 18 to 34, women, those with children in their household, and Massachusetts Border residents are more likely than others to say they have tested positive for COVID-19 at some point.

Ever Tested Positive for COVID-19 - February 2022

We ask that this copyrighted information be referred to as *the Granite State Poll*, conducted by the University of New Hampshire Survey Center.

COVID-19 Vaccination

Six in ten (61%) New Hampshire adults say they are fully vaccinated against COVID-19 and have received a booster, 17% are fully vaccinated but have not received a booster, less than 1% have received one dose of a COVID-19 vaccine but still need a second, and 22% have received no doses. The percentage of New Hampshire adults who say they have received at least one COVID-19 vaccination shot has remained largely unchanged since December. More than nine in ten (91%) Granite Staters aged 65 and older are fully vaccinated and have received a booster, but only 60% of those aged 35 to 64 and 42% of those aged 18 to 34 are fully vaccinated and boosted.

Overall, 88% of New Hampshire adults are likely to have some level of protection against COVID-19 by virtue of either being fully vaccinated or having been diagnosed with COVID-19 in the past six months. Nearly all self-identified Democrats and those aged 65 and older have some level of protection but at least one-fifth of self-identified Republicans, those aged 18 to 34, and those with a high school education or less are likely to have no protection against COVID-19.

Vaccination Status - February 2022

Among those who are fully vaccinated but have not received a booster (N=180), 29% say they will almost certainly or probably get one while more than two-thirds (68%) say they will probably not (14%) or almost certainly not (55%) get one.

Likelihood to Receive COVID-19 Booster - Feb 2022

Among New Hampshire adults who have not received a dose of a COVID-19 vaccine (N=233), less than 1% say they will probably get vaccinated in the future, 32% say they will probably not do so, nearly two-thirds (66%) say they definitely will not, and 2% are unsure.

Likelihood of Receiving COVID-19 Vaccine - February 2022

When New Hampshire adults who do not plan to get vaccinated (N=216) are asked why they do not plan to do so, three-quarters (76%) say it is because they don't believe the vaccine will be effective at stopping them from getting COVID-19, while just under half say they don't trust the pharmaceutical companies that manufactured the vaccines (47%) or that they don't trust the vaccine will be safe (42%). Three in ten (30%) don't plan to get vaccinated because they have already had COVID-19 so they don't feel it's necessary and 19% don't believe COVID-19 is a serious threat to their health, while fewer say the vaccine is contrary to their religious beliefs (9%), they don't believe in vaccines in general (8%), they are medically unable to receive vaccines (3%), or for another reason (12%).

Reasons Unlikely to Receive COVID-19 Vaccine (Select all that apply) - February 2022

COVID-19 Vaccination for Children

Most New Hampshire parents of children under 18 are unlikely to have their children vaccinated. According to parents in the state, 39% of their children between the ages of 5 and 17 have already been vaccinated while an additional 1% will probably or almost certainly get vaccinated. Six in ten (60%) children aged 5 to 17 in the state will probably not (9%) or almost certainly not (51%) be vaccinated according to their parents.

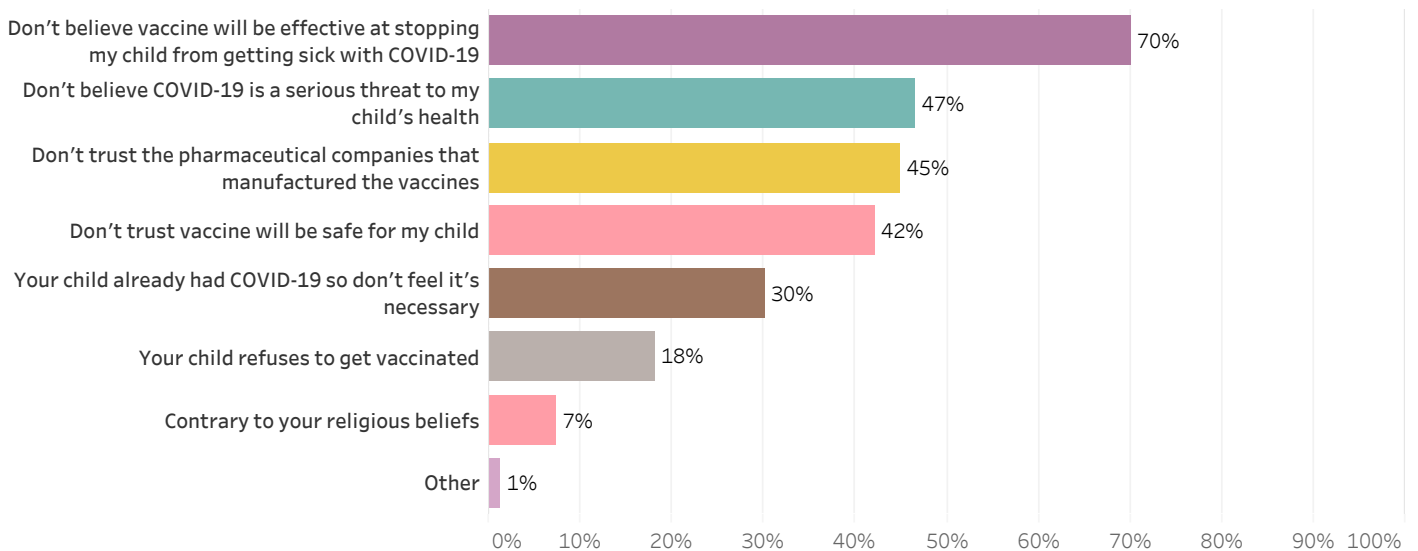

Among parents who are vaccinated and boosted themselves, 94% of their children are vaccinated or are likely to be, but among those who are fully vaccinated but not boosted only 32% of their children are vaccinated or are likely to be, while only 1% of children whose parents are unvaccinated are vaccinated or are likely to be.

Likelihood of Child Receiving COVID-19 Vaccine - February 2022

When New Hampshire parents who are unlikely to vaccinate at least one of their children (N=150) are asked why they do not plan to do so, 70% say they don't believe that COVID-19 will be effective at stopping their child from getting sick with COVID-19 while just under half say they don't believe COVID-19 is a serious threat to their child's health (47%), they don't trust the pharmaceutical companies that manufactured the vaccines (45%), or they don't trust the vaccine will be safe for their child (42%). Fewer parents say they are unlikely to vaccinate their child because their child has already had COVID-19 so they don't feel it's necessary (30%), because the child refuses to get vaccinated (18%), because it is contrary to their religious beliefs (7%), or for another reason (1%).

Reasons Child Unlikely to Receive COVID-19 Vaccine (Select all that apply) - February 2022

Trust in Official Coronavirus Information

Forty-seven percent of New Hampshire residents trust science agencies such as the Centers for Disease Control (CDC) as a source of information about COVID-19, 35% do not trust them as a source of information, and 18% don't know or are unsure. The percentage who say they don't trust science agencies (35%) is higher than at any point other than May 2021 (39%).

Trust in Science Agencies as Source of Information on Coronavirus

The partisan gap in trust in science agencies as a source of information on COVID-19, which was virtually non-existent at the beginning of the pandemic, remains extremely high. Eighty-nine percent of Democrats say they trust these agencies as a source of information but four in ten (40%) Independents and only 9% of Republicans feel this way.

Trust Science Agencies as Source of Information on Coronavirus - by Party ID

Granite State Poll Methodology

These findings are based on the latest Granite State Poll, conducted by the University of New Hampshire Survey Center. One thousand eighty-one (1,081) Granite State Panel members completed the survey online between February 18 and February 22, 2022. The margin of sampling error for the survey is +/- 3.0 percent. These MSE's have not been adjusted for design effect. The response rate for the February 2022 Granite State Poll is 29%. The design effect for the survey is 2.9%.

Data were weighted by respondent sex, age, education, and region of the state to targets from the most recent American Community Survey (ACS) conducted by the U.S. Census Bureau, as well as party registration levels provided by the NH Secretary of State and to 2020 election results in New Hampshire.

The Granite State Panel is part of an effort by the University of New Hampshire Survey Center to investigate new ways of gathering and understanding the opinion of New Hampshire residents. Approximately 7,500 New Hampshire adults have been recruited from randomly-selected landline and cell phone numbers to participate in the panel. Panelists are then asked to participate in online surveys sponsored by the UNH Survey Center.

The number of respondents in each demographic below may not equal the number reported in cross-tabulation tables as some respondents choose not to answer some questions. Due to rounding, percentages may not sum to 100%.

For more information about the methodology used in the Granite State Panel, contact Dr. Andrew Smith at (603) 862-2226 or by email at andrew.smith@unh.edu.
