DURHAM, NH - Vice President Kamala Harris has increased her lead over former President Donald Trump in Maine and the race is tied in Maine's 2nd Congressional District. Nearly half of likely voters in the state expect Harris to win. Harris is more personally popular than Trump and is rated more highly on several personal attributes, particularly physical and mental fitness and temperament. The Democratic vice-presidential nominee, Minnesota Governor Tim Walz, is generally popular in Maine and most Harris supporters are enthusiastic about his selection. President Joe Biden's job performance remains unchanged as half of Mainers believe he has been below average or one of the worst U.S. presidents.

2024 Presidential Race

If the presidential election were held today, 55% of Maine likely voters say that they would vote for Harris, 38% would vote for Trump, 2% would vote for Independent Robert F. Kennedy Jr., 1% each would vote for Green Party candidate Jill Stein or for Libertarian candidate Chase Oliver, less than 1% would vote for any other candidate, and 2% are undecided. Harris garners 62% of the vote in Maine's 1st Congressional District compared to only 33% of support for Trump. However, the race is close in Maine's 2nd Congressional District, where 49% say they plan to vote for Harris and 44% plan to vote for Trump.

If they could only vote for Harris or Trump, 58% of likely voters say that they would vote for Harris and 41% say they would vote for Trump. Shortly after President Biden's withdrawal in July, Harris was supported by 48% of Mainers while 40% supported Trump. Harris enjoys overwhelming support from self-described liberals (92%), progressives (90%), and socialists (86%) in Maine, along with support from more than two-thirds (69%) of moderates. Trump has the support of 92% of conservatives and most libertarians (76%). Harris holds very large leads among women (65% to 27%) and those with college degrees (68% to 26%) while Trump leads among men (51% to 43%) and the two are closely matched among those without a college degree, with 48% supporting Harris and 45% supporting Trump.

Pine Tree State Poll Methodology

These findings are based on the latest Pine Tree State Poll, conducted by the University of New Hampshire Survey Center. Eight hundred twenty-one (821) Pine Tree State Panel members completed the survey online. The response rate for panel respondents to the August 2024 Pine Tree State Poll is 40%. In addition, 178 Maine residents completed the survey after receiving an invitation via text message to complete the survey online. Overall, 999 individuals completed the survey between August 15 and August 19, 2024. The margin of sampling error for the survey is +/- 3.1 percent. Included in the sample were 951 likely general election voters (margin of sampling error +/- 3.2 percent). In addition to potential sampling error, all surveys have other potential sources of non-sampling error including question order effects, question wording effects, and non-response. These MSE's have not been adjusted for design effect. The design effect for the survey is 2.2%.

The Pine Tree State Panel is a probability-based web panel of Maine residents. Approximately 2,500 Maine adults have been recruited from phone, text-to-web, or mail-to-web surveys sent to randomly-selected phone numbers or addresses. Panelists are then asked to participate in online surveys sponsored by the UNH Survey Center.

Data were weighted by respondent sex, age, education, and region of the state to targets from the most recent American Community Survey (ACS) conducted by the U.S. Census Bureau, as well as party registration levels provided by the ME Secretary of State and to 2020 election results in Maine. Surveys were taken in English, all respondent data included passes Qualtrics data quality checks, and single-use survey links were used to prevent multiple submissions by respondents.

The number of respondents in each demographic below may not equal the number reported in cross-tabulation tables as some respondents choose not to answer some questions. Due to rounding, percentages may not sum to 100%. All coding of open-ended responses is conducted by human coders.
