

In the News: Daniel Seichepine Talks Heroin's Effects on Brain on WMUR

Wednesday, April 21, 2010

Daniel Seichepine, assistant professor of psychology and neurophysiology, speaks with WMUR's reporter. She asks about the physiological and biological changes happening in the brain that happen as a result of using drugs like heroin, which poses real challenges for users and recovery.

"What happens to the brain?" Seichepine is asked. "The brain changes in a way that makes it harder to stop using drugs."
