

# Beyond "Stranger Danger"

## New study finds 16% of young adults have experienced sexual abuse online

Friday, October 14, 2022

One in six young adults — 16% — in the U.S. have experienced at least one type of sexual abuse online before the age of 18, according to new research from UNH's [Crimes against Children Research Center](#).

The [study](#), published in the Journal of the American Medical Association Network Open, is the first comprehensive study to look at multiple forms of child sexual abuse online. It found that 62% of the perpetrators of online sexual abuse were acquaintances from their offline life, with a majority of those being

current or former intimate partners. Almost a third of the perpetrators were under age 18.

“The prevailing image of online sexual abuse is that it mostly involves stranger predators who stalk kids with technology,” says [David Finkelhor](#), professor of sociology and director of the CCRC. “But the reality is very diverse. It can include people from their face-to-face life, including boyfriends who non-consensually misuse sexual images, adults they know who through social media try to draw them into illegal relationships and some youth who earn money by selling self-made sexual images online.”

The study counted a variety of these abuses, including being groomed online by an adult, being the victim of revenge pornography, sextortion or nonconsensual sexting or engaging in online commercial sex. Rates of online childhood sexual abuse were particularly high for girls (23%) and transgender or gender-fluid children (20%). One in 13 boys also reported exposure. The national survey sampled over 2600 young adults between the age of 18 and 28.

“Kids need more than just warnings about interacting with strangers or not giving out personal

“It’s promising that many schools and organizations are eager to provide online safety information to children these days,” said Finkelhor. “But kids need more than just warnings about interacting with strangers or not

information. They need advice about how to judge the trustworthiness of friends and acquaintances and how to recognize and refuse inappropriate requests.”

giving out personal information. They need advice about how to judge the trustworthiness of friends and acquaintances and how to recognize and refuse inappropriate requests.”

UNH professor of sociology [Heather Turner](#) and graduate student Deirdre Colburn, both researchers with the CCRC, were co-authors on the study.

Funding for the research was provided by the [National Institute of Justice](#), the research, development and evaluation agency of the U.S.

Department of Justice. The CCRC

has been conducting research on online offenses against children for over 20 years.
