Open Science

Open science

Doing science openly

Open data

Collecting the data
Doing research

Administrative data (held by public authorities e.g prescription data)

Public Sector Research data (e.g. Met Office weather data)

Research Data (e.g. CERN, generated in universities)

Outputs

Research publications (i.e. papers in journals)

Researchers - Citizens - Citizen scientists – Businesses – Govt & Public sector

Science as a public enterprise
Center for Open Science

OPEN, TRANSPARENT, AND REPRODUCIBLE SCIENCE IS STRONGER SCIENCE.

https://cos.io/
Open Science Framework

The basics
• You can have as many projects as you like
• No project size limit, but 5GB file size limit
• Sustainability - OSF has agreement with publishers to keep projects available for 10 years

Supports project and workflow management
• Version Control
• Connect to other research tools (for example GitHub, Box, Zotero)
• Link projects together

Supports collaboration
• Wiki = real time text editor
• Control access to different components
• When you create a project it defaults to private

Supports multiple disciplines
• Designed to be flexible to accommodate different workflows and structures of projects

Supports Open Science
• Make public some or all components of the project
• Register your project at a point in time
  • snapshot of pages/components
  • registrations are public
• Global unique identifiers
  • used for citing the project
  • used for sharing the project, components of the project, files within a project
• Search/browse other people’s public projects on OSF
  • public projects index by Google

Going public

Warning

Please review your projects, components, and add-ons for sensitive or restricted information before making them public.

Once they are made public, you should assume they will always be public. You can return them to private later, but search engines (including Google's cache) or others may access files, wiki pages, or analytics before you do.
